I've just obtained Papyrus from Ebay. A couple of questions:
- How can I backup the original disks?
- Does anybody has the RSC files translated to English?

Thanks in advance.

Hey all,

Was thinking back to the good old days of controlling stuff from the parallel port. I know years ago I did a 12x6 led array which was controled from STOS, just using the LPRINT command to control address/data levels on the led matrix.

Was thinking of a small plug in box which would plug into the parallel port, will house some LED's for a indication that the port is active, then offering either a larger LED matrix box, or another box for controlling mains equipment etc, anything is possible really. The parallel interface will become the "host interface", which will decode commands and give probably a output set of 16 ports. Could even be used on the PC, even though most have gone USB now anyway.

Was half thinking aloud about this since its something ive had in mind for a while now, so just seeing if they would be any interest in doing a small production run of the things. The host itself isn't going to cost much to build and develop so its going to be pretty cheap *I think*. Depending on what people are wanting to control then it depends on cost of building some form of "output box", either holding power mosfets for controlling 12V motors/lamps etc, or relays for controlling mains equipment.

Was just a though about if there would be interest in it, controlling stuff from computers is always fun ;-)

Chris

Reminds me of the "Robotic" kit that sold for the ST for awhile, or the X10 stuff that controls household appliances.

I'd be interested in a modern version that would run on all Atari models.

What about software? Thanks.

I can do software but it can only be in STOS, which unfortunatly will not
run in any multi-os :-(I could publish the control docs for it should
there be anyone who would want to write software for it... Will have to see
if I can find someone before I consider the hardware as I think it could
become problematic having being limited on one program running :-\

Just another victim.

Best Regards,

Daniel Mandic

P.s.: Even the ST is already smoother then the PC. Not to mention other
great Videomachines. DAD or DAA or even AAA.

> I don't know if you've ever seen the M5485EVB but it's the motorola evaluation board system. It's just an IO setup in a nice Mini ITX form factor. Comes with Ethernet, PCI, USB 2.0, graphics chipset and more. It takes several different configurations of Coldfire chip + RAM on system on chip modules.
> The whole shebang costs between $900 and $1200 with different options.
>
> Now understand, I love the idea of a home-made coldfire machine that solves our needs perfectly, but MiNT already runs on the evaluation hardware... Why not just call this evaluation board a hardware platform for us? It boots linux too ;) Why not just have everyone buy this.. Perhaps we could get a run of 100 of them at discount from motorola. Seems easy enough to me. Why waste years and years in unnecessary hardware development? Or do people do the hardware because they're afraid of the software ;)
>
> Thanks,
> Mark

A large FPGA would do the trick too. Useable development boards for them are a bit cheaper.

Hi,

It's a pleasure for me to announce the release of a 3D package based on ARAnyM. This package includes many applications that are related to 3D modelling and production of synthesis images.

More can be found on the following links :

[French]

<http://helijah.free.fr/Pack_3D/Pack_3D.html>

[English]

<http://babel.altavista.com/translate.dyn?lp=3Dfr_en&doit=3Ddone&url=3Dht=
tp://helijah.free.fr/Pack_3D/Pack_3D.html>

[German]

<http://babel.altavista.com/translate.dyn?lp=3Dfr_de&doit=3Ddone&url=3Dht=
tp://helijah.free.fr/Pack_3D/Pack_3D.html>

[Spanish]

<http://babel.altavista.com/translate.dyn?lp=3Dfr_es&doit=3Ddone&url=3Dht=
tp://helijah.free.fr/Pack_3D/Pack_3D.html>

[Italian]

<http://babel.altavista.com/translate.dyn?lp=3Dfr_it&doit=3Ddone&url=3Dht=
tp://helijah.free.fr/Pack_3D/Pack_3D.html>

This 3D package works similarly on 3 OS/platforms including Windows, Linux and MacOSX.

Have fun :)

Please report your comments. You're welcome.

Best regards,

Sorry, not sure if that is a question for me.

The Brother is a HL 1440. My Atari is a 1989 520ST upgraded to 4MB RAM.
Marcel 2.3 WP with the HPLJET.PRD printer driver (one of the ones included
with the program which I bought from CyberSTrider many years ago).

John

Buy an LCD television with a VGA input on it (most have them). Then with a little switch box you can toggle between low+med (scart) and high (vga).

But otherwise, high-res is all you will actually be getting on a PC monitor. All you need is a cable which is wired up appropriately. The mono signal from the ST goes straight to the VGA RGB lines.

Hi Taxman

I did think about that, but having just gone through the 6 pages of forms
and used my Atari to transfer my digi-cam pics to floppy disk because this
old Win95 PC can't read Compact Flash cards in its PCMCIA port - I couldn't
be bothered to go back in to eBay to get it!

Look under Vintage Computing, type in "Atari Falcon CT60" and I bet you'll
get to the requisite page! Not having seen another one advertised on it for
months.

Neil :-)

What version do you have? I have and use version X. I thought there was some
English versions of the RSC files on the Net, but I am not positive.

I have two Atari computers connected to the Internet using network cards. I
have a Hades060 (Atari clone) that using a PCI network card and a STe that
uses a network card that connects through the cartridge port. Both work great.

Same here, I'm not programmer but I'll be perfectly willing to do what I
can.

Yes, this will get you the latest 1.16.1 beta release. If you havent installed MiNT before, I would do the following;

1. Install EasyMiNT
2. Get the 1.16.1 beta at the above link, read the docs on how to upgrade an EasyMiNT installation.
3. Get the latest alpha release from xaaes.atari.org, it contains the current 1.16 kernel, 1.16.cur.

Best Regards,
Odd Skancke

Yeah,

This is a better solution for the newbie.  But in a little bit the
atari-source.org problems should be fixed.  Someone needs to tell me this
stuff ;)

Thanks,
Mark

You can see him using the ST and talking a little about it in the
making-of DVD of the deluxe English version of Ca Ira.

Cheers
Simon

Since R.O.M. produce(d) Papyrus in English along with German, I don't
think that's likely TBH.

Yes, but Papyrus for TOS was produced only in German. For windows there
is english version of Papyrus.

I installed this on windows XP. It looks beautiful thanks for all
your work. My question is this - when I tried to run some of my other
programs by
copying them to the "programm" folder they just wouldn't work. Am I missing
something or is it necessary to have Aranym specially configured for office
& DTP programs?

Papyrus versions 4, 5 & 7 wouldn't run. Calamus SL96 tried to load but was
unuseable, DAs Layout also no go. Atari Works loads, starts a new document
but the menu options are then grayed out making them inaccessible.

Harlekin III loads and appears to work.
Any suggestions would be appreciated. I do have NVDI 5 (a legitimate copy) so
I could use that if it helps things along. Also would using Tos 4.04 improve
compatibility with earlier programs?
Does anyone else have experience with this?

regards
Maurice

Hi,

Before I change my current configuration (NVDI, NAES, NTHING, MINT) my plan was to play with Aranym first. But I absolutely confused. I tried FVDI, XAAES, TERADESK, MINT. How the screen resolution and color depth is determined? There are configuration items in FVDI.sys, XAAES.cfg and also options in TERADESK. What should I set in these files to get 1024x768x65535?

Thanks,
Jozsi

In fvdi.sys set resolution to 1024x768@16 (there's examples in there). In XaAES, I think you can just leave it alone, but if it's being strange, just set it to video=27. As for teradesk's config, I didn't even know it had a resolution setting but it shouldn't change your situation. Check out the afros disk for more info on getting things setup properly.

Thanks,
Mark

You may ask questions on the ARAnyM's mailing list to share your
experience with other users at : <http://aranym.atari.org/>.

> I do have NVDI 5 (a legitimate=20
> copy) so
> I could use that if it helps things along.

NVDI is a commercial product that can't be placed in a free package.

> Also would using Tos 4.04=20
> improve
> compatibility with earlier programs?

Yes, it may ... You're right. Please test and report about it.

> Does anyone else have experience with this?

You will meet other users on the ARAnyM's users list :)

Anyway, you know that if ARAnyM hasn't reached the "1.0" version
number, that means that it is still under strong testing stage.

Please let us know about your testings.

Best regards,

Well I hooked my wife's HP2100 to my Hades which has the same printer port on a ST and it worked. Of course I was using NVDI 5 and a generic HP laser printer driver that is supplied with NVDI 5. The text came out fine, but did not try to print any graphics. A ST can run NVDI 5, so that may be an option for you.

Hmmm.. I hope I don't bore you all to tears with my questions. I have
another question, how do you connect to internet with a atari? Are there
network cards?

Mikael

About the Supercharger 286,

It was called "SCplus 286", and made by the same Beta Systems team.
Here are three pictures of it:
1) http://perso.wanadoo.fr/gtello/scplus_c.jpg
the old mother board on the left with the NEC V30 off and replaced by a connector to the two daughter boards on the right.

2) http://perso.wanadoo.fr/gtello/scplus_b.jpg
the first part of the daughter board, a kinf of interface between the NEC V30 logic and the 286 one?

3) http://perso.wanadoo.fr/gtello/scplus_a.jpg
the second aprt of the daughter board with, in the upper left corner the FPU 287 and maybe, the 286 (the square on the left with no marks on it).

The guy who owns this piece of hardware told me that it doesn't work. A pity!

Guillaume.

????

I read here that your price is 1200 $
Very expensive !

I cannot think that some of you are rady to pay a such amount for just a CF machine.

OK, the CF CPU is around 30$...

I consider that a good price should be less than 300 $.

If you can go under 300$ at Freescale, that's good...
If not, you can buy it at 1200$ but this will never be an official replacement of the atari...because 99% of the atarians will not be able to pay a such amount of money .

Just for your info, I was already spoken with Didier Mequignon about how to do a atari machine clone in the better and faster way around a CF...
Some things have been decided... (by example to put the old MFP chip to reduce the work on the TOS !).
Now I need time to check all ideas from several developers...and select some technologic choices...
I have good contacts with some big US brockers...to get CF, MFP, DSP and other things at a good price...

Now it will nextly be time to work !

Who is ready to work with me to help on software, documentation, communication...and so on... ??

Regards

The CT63 are ready : I will get them in few days...
The 060 were localised and ordered... Should be here the first week of February.

So, the shipping of the orders will begin in February...
As always, you will receive an email when your packet is shipped.

Bye

You can count me in. I will help with FreeMiNT/XaAES for sure.

The past few weeks I've been going back on forth on getting a PegasosII machine, with only one target in mind, to port FreeMiNT/XaAES. And now that this design is open and downloadable from Power.org, perhaps it can be used? And if there is one dude who can, it is you, Rodolphe.

Ofcourse, porting our system to a PPC is a lot of work, I think a lot more than a CF based machine would require. But the net result will be a better faster hardware-base I think. How do you, and others, feel about that?

In anycase, we need new hardware! So I would welcome any new hardware that can provide us with a 'new hope'...

Best Regards,
Odd Skancke

It would probably help everyone reply to you if you told us what Atari you have, if you have a HD, how much RAM, etc, etc. (if you already posted this and I missed it - I apologise).

Using software like STing and an external serial modem is how many do it for direct dial-up.

If you're not talking about dial-up, then there are several more options.

You can use a Lantronix UDS10 serial to LAN converter box to do text, like ftp, telnet, etc... Its a bit expensive though.

Rory sells the EtherNEC - a network card in a box, that plugs into the cartridge port of any ST, TT, or Falcon. Its quite a bit faster than dial up speeds, but not as fast as a true network card connection.

If you have a CT60, the EtherNAT will be out soon that will offer true network card speeds.

There are other options as well - I'm sure others will post them here.

Once connected, you can use software like CAB or Highwire to browse,
Newsie for newsgroups, Mymail or Newsie for mail, AtarIRC, AtarICQ, and
other good software.

HTHs.

I'd still check Best Electronics - or B&C Computervision. They both have
options, I believe...

The HP website notes DOS compatibility, PCL5e, and a parallel port, so it should work. (These are typically the three things you look for.) A basic ST should be able to get text output in a typewriter style font, and should make use of those programs that have "HP Laser" or "HP Deskjet" drivers. Add NVDI or SpeedoGDos and the printer should be able to handle most Atari programs. (The exceptions are those that assume an Epson 9-pin is attached. Fortunately, these programs are usually pre-1990 and thus are now rarely used.)

P.S.: If you buy it, please post if it works. I'm 95% certain it will, but I haven't checked a recent HP printer personally.

Galen

As others have said yes, you can get hi-res fairly easily.. However if you want to play games then a CRT based PC monitor is no good on its own. What you really need is something that runs TV type Video, preferably via RGB. You can then get (or make) an Atari Video to "scart" lead. I use an Phillips CM8833, but there are several other monitors available. I guess something like this

http://www.microdirect.co.uk/ProductInfo.aspx?ProductID=9359&GroupID=420

not sure to wacth the response ....

Other options are are an external TV RGB to VGA converter, but these seem both rare and expensive.You can also use a video capture device to route the video through a PC. Whilst these work, you don't always get a goos picture....

Hope this helps,

Dave.

To everyone,

I could not agree more with everyone in this post. It is long overdue that we have some sort of major hardware revamping. Who ever comes out with the first Atari replacement will most likely be the first to get my money. Course I would make a more educated decision once one of these computers is out and see how completion is coming on the other computer as well. But I have supported the Falcon upgrades right down to CTPCI or the Supervidel and will continue to do so even if an Atari clone replacement comes out. I have every piece of new hardware that has come out in DUPLICATE (YES thats twice!!!) And plan to never give up any of this hardware at all. But I would pay 1200 or 1300 for a new computer as well. But if Rodolphe can do it for half or even less than that GREAT you have my money Rodolphe. COUNT ME IN!!!!

Thanks,

--

I certainly do. I wouldn't have been able to get half the Atari stuff that I've got if not for access to Ebay.

I'll extend AHCC with a CF target, not too difficult.
Using AHCC would mean that CF software could be produced
on a TT.

I would be happy to help with documentation or simple coding. I can't do anything complex unfortunately. I can do lots of mint development and help with a CF optimized mint distribution.

Thanks,
Mark

To further add to this interesting ideal.

1. The M5485EVB is Mini ITX form factor which means it will fit in an
absolutely huge amount of available cases.
2. The M5485EVB - which I thought was just the evaluation board itself
ALSO COMES WITH the M5845CFE. This is a 200MHz (equal to the M5475 266MHz
in power) coldfire SOM with 64MB of DDR and 16MB of flash, as well as
a graphics controller and USB Host.

This means the total cost for the coldfire system is $850.

The only PROBLEM I see with this system is that there doesn't seem to be a
way to get it with more than 64MB of ram.. still 64MB is a good start.

Thanks,
Mark

I am unfortunately not able to help out with the actual work to adapt
MiNT to run on PPC, but if someone would be aiming for that - I would
try and support the project any way I would be able to.

Regards,

/Joakim

Sorry for the low-quality picture, but this should still give everyone an idea about what my Falcon looks like now, after some "minor" changes:

Wizztronics rack case
425 watt ATX PS
CT60 @ 95mhz
256 megs SDRAM
16 megs ST RAM
Wizztronics IDE HD controller
80 gig Maxtor HD
Plextor 4/12/32 CDRW
DEKA keyboard interface
FreeKeys case
NEC 3D multisync monitor (with multisync gizmo)
Running MINT/Thing

I wired everything so that controls like the on/off switch, CT60 on/off switch, reset button, power and HD LEDs are all up front on the case.

Using Krylon Fuzion paint for plastic (as recommended here and at Atariage), I painted the monitor, keyboard case, floppy drive faceplate, and CDRW faceplate.

My wife is jealous of the attention it has gotten/gets...

I like it. :-)

How did you wire the power switch of the Falcon Rack to the CT60? I have the same rack, but a problem with that switch and the CT60.

First time I have ever seen a 286 version.

They did advertise a 386 and even a 486 version.
Wonder if those were ever made.
From the first photo, I can't tell if he has a 512K version or a 1 meg version.
I notice that there are only 4 Ram chips on the main board.
The one I have has chips in all the sockets. I think I have a 1meg version.
It has been awhile since I have used it. I do have it setup on a hard drive, along
with the Spectre GCR software. Up on boot up, you can choose from a menu to
run DOS, MAC system 6, or TOS. (With the Spectre GCR cart installed).

I have used it on a 4meg 1040 STe TOS 1.62 and it works well.
It would be possible to access the Net with the SuperCharger in DOS using
Net Tamer. There is a version for pre-286 chips, as well as a 286, and a 386/486
version. It does E-Mail, FTP, News, TelNet, and Web in Text mode.
I think there is a Graphic version for Web Browsing if you are using a 386 or better.

It's been awhile since I have used it, but its a interesting program to use on a Atari ST-
Falcon with a PC hardware board.

So did I. I tried breaking a 12v that was in the harness leading to the CT60 but that didn't work. What would happen was that the I could turn the switch on and sometimes the CT60 would come on, sometimes it wouldn't. Also for turning it off - sometimes it would go off and sometimes it wouldn't. Many times the switch would wind up in an on or off position, but the state of the machine would be just the opposite. Also, if the power went off to the machine from the outlet (say a power outage or even unplugging it/plugging it in) then the computer would come on.

What I finally did was this, I opened up the ATX power supply case itself, (unplugged of course - important safety tip!), and there you'll find 3 wires coming in, 2 hots and the ground. The on/off switch thats built into the power supply itself breaks one hot lead. I ran 2 wires from the on/off switch on the Wizztronics case into the power supply and broke the other hot lead. This way, its a true ON/OFF to the CT60. It works great like this.

I'm sorry for the very non-technical description - I'm not an electrician but this does work for me.

If you like, I could take it apart, take a picture, and e-mail it to you?

Just let me know! :-)

Here's some instructions from a well known Atarian (lightly edited) on how to make a cable. It is also possible to purchase these from several sources as has been previously noted.

Galen

- - - - -

Atari ST to VGA adapter

Claes Holmerup
17 Aug 1998

You can use an SVGA monitor with an adapter cable (which is rather easy to assemble) to get a monochrome picture. Some old VGA monitors may work, but all SVGA should work as far as I know.

Here's how you make your adapter:

Atari (13-pin DIN)	SVGA (15-pin HD D-type)
11 (Monochrome output)	1,2,3 (Red, Green, Blue inputs)**
12 (Vertical sync)	14 (Vertical sync)
9 (Horizontal sync)	13 (Horizontal sync)
13 (Ground)	4,5,6,7,8,10,11 (Various grounds)
4 (Monochrome detect)	short to ground (pin 13 on ST)

The trick here is that the monochrome signal is fed to all the inputs on the SVGA-monitor, which gives you a very nice monochrome picture. Even though the monitor in fact is a color monitor, you won't be able to see a color picture because of the construction of the computer (and the monitor). If you get your hands on a monitor which handles frequencies down to 15kHz, it's a whole new deal - then you should be able to build yourself a cable with a switch between mono and color (a little more complicated, involving a 4-way switch, but possible all the same). Just about no modern monitors go lower than 30kHz, so in most cases there is no other choice than mono - but since most useful programs (IMHO) run in monochrome, it's the best alternative anyway...

Good luck!
Claes

**Editor's Note: The ST output is a bit higher than the 0.7V expected by the VGA monitor, so some sets of instructions call for an inline 4K7 resistor. If your monitor can handle 1V input (most modern ones can), the resistor is not needed.

I wired the power switch directly to the CT60 and quickly switch the
switch on and then off.  The CT60 notices the change and turns itself
on or off as required.

Very nice. My setup is similar (although 425W is WAY more than the
Falcon will ever use). What do you mean by the "Wizztronics IDE HD
controller"? Is that the 2 drive IDE connector? If so, how did you
wire the drives?

Hi,

> The past few weeks I've been going back on forth on getting a PegasosII
> machine, with only one target in mind, to port FreeMiNT/XaAES.
> Ofcourse, porting our system to a PPC is a lot of work, ...

I had made my own thougts about making a Atari environment with the
pegasos board. But my goal was to reuse as much code as possible to
spare time. As a result a have a different way:

I glue together linux drivers (for bios), a little bit oy my own code and the
emulator of aranym. Inside the emulator i will run EmuTOS without BIOS
and XBIOS. The BIOS trap will be handled instead of my own code which

calls the linux drivers. With this way i can reuse much of the still existing linux drivers.

Inside this "Atari" i can run FreeMiNT from EmuTOS. I see no reason why to start with MiNT because MiNT contains no drivers (no BIOS). The same is with the AES. Because these parts are hardware independant, we can leave a port of this parts for a later version. In my opinion it is much more important to have a base for access the hardware.

Best Regards
Michael

Hello guys,

I wanted to write up a little post on my interest in starting a new desktop. I think that even Jinnee leaves much to be desired for our file interaction and the desktop is truly the heart and soul of the atari experience. Jinnee is in my opinion the best we have, but it is expensive, not free, and likely not going to be developed further.

Now we have teradesk. An open source desktop. It's truly great in my opinion, rock solid, small footprint, and fills a void on older constrained systems. This is why I think a teradesk fork is what the doctor ordered.

Tentatively, I think the name xDesk is pretty cool. I'd like to bundle it or tie it to XaAES as much as possible, as I really like the feel of a truly unified GUI. Now that we have the CT60, there's virtually no limit to memory consumption. It should be small and fast but quite featureful using XFCE as a kind of model.

Some things I would like to see:
Truecolor desktop backgrounds in any format using zView codecs to render.
Truecolor icons in any format, but most importantly truecolor SVG and PNG. I would tend to want a stock icon set of the tango project as, quite frankly, they're gorgeous: http://tango-project.org/Tango_Desktop_Project

With the exception of drives which are links, the desktop will house REAL files and REAL folders and will be /users_home_folder/Desktop just like on gnome.

SVG has the added benefit of producing icons that look good now at 640x480 and later when we have larger resolutions on falcons. (or on Aranym, Hades and Milan).

The icons should also be anti-aliased if it helps their appearance.

3 styles of navigation.. OSX style with the multipaned window view, Nautilus/Atari style spatial navigation, and a full featured browser style navigation. The navigation styles could be loaded via plugins to reduce resources.

Anti-aliased fonts. This'll need changes to NVDI/FVDI but that could be done soon.

OSX/Gdesklets style bouncing icon starterbar on the bottom of the screen. Perhaps a scriptable desktop widget system to complement that.

Samba network browsing and URI parsing. Highwire should be able to be loaded and html be viewed within the desktop browser windows.

A very elegant preferences system. Perhaps a redo of cpx's? Or maybe an embrace and extension of CPX's.

Tight freemint integration with package addition/removal built into preferences and perhaps a full application management/change tracking system. You could tell the desktop that you're about to install an application. It'll track the changes and provide a method for you to uninstall later.

Basically I want every element of the system to look and feel modern and beautiful when running in truecolor. Right now, when I use truecolor it's a very complicated affair to even tell! I have to run zweather, which has truecolor icons, or kronos whose opengl test is obvious when truecolor. To me this is understandable given how things were for so long, but at the same time I think we should work hard to make the supervidel (and aranym) more rewarding. If you ever look at screenshots of amigaos and morphos it'll probably make you sad because it's so beautiful. I want that for us too.

So that's that. I think our biggest weakness in the atari world is a lack of organization, drive, and a sense of urgency. To assure you all that I'm not a hypocrite, I recognize that I do this exact thing too.

We have a LOT of programmers around. I'd love for as many of them as possible to help. Therefore if the community likes the idea, and the manpower is available and the project happens, I'd like to manage the project and organize the milestone releases, etc. Additionally, I can host the cvs server, orient new developers who'd like to help but don't know where to start, documentation, quality control, etc. I'd also help with the coding to the maximum extent that I can.

People I'd love to have help:
ozk: bug hunting, general stability fixes and optimization. The work you've done to XaAES is no less than astounding. Perhaps assurance that someday it can be built on PPC?
Zorro: I like your style and I think zview/zweather is awesome, we'd need you to implement SVG support and recommend ways to implement zview codecs for such a heavy load. Would it cache every icon? etc.
Eric Reboux: Busy with myaes I'm sure, but the xgem look is fantastic and I'd like to implement the fonts, gradients, shadows, etc.

Basically anyone whose done any GEM work at all and understands C can get involved. A desktop is just a glorified GEM application after all! I've left many perhaps even better qualified people out of that list, but this is the kind of thing that will benefit from many hands and many minds.

A commercial quality desktop is really the final frontier for an OSS GEM environment!

PLEASE COMMENT ON THIS THREAD! Good or bad opinion, and everyone who CAN help please comment on how much you WILL help. I'd like to establish right from the start whether the project is worth it or possible rather than waste our time. I know there's enough demand for such a desktop, but the important question is how much time the gifted developers can spare from their current projects and lives and if they want to.

Thanks,
Mark

Agreed. 425 watts is way high as far as what is necessary. However, I had it as a spare so I used what I had. If I had found the need to buy one, I surely wouldn't have bought one that large. Although I do have the CT60, RAM, CDRW, HD, floppy, etc, etc,...

Yes, it is the 2 IDE drive adapter. No need to wire anything - I simply hooked up a spare 80 gig Maxtor IDE HD that I had, via a standard IDE cable. Works straight out of the box. The adapter itself plugs straight into the original HD header on the Falcons MB. I'm not using the original 2.5" inch drive. (although I could have)

Or was that what you meant?

Isn't it dangerous to know too much? I'd better
learn to dodge bullets and avoid dark aly's thoughts.

By the way, I hope you don't lose too much
interest in that IDE<-> SCSI thing. I'm starting
to get interested myself, though I'm not in a position
to help in any way.

Steve.

Same situation for me, I guess I was just looking to make it more
asthetically pleasing because that matters to me.  I really like Jinnee
too, I wish it could just get extended instead.

Thanks,
Mark

Mark,

I love the idea, and agree wholeheartedly! While I enjoy using my Falcon more than any other system, I do agree that there are a lot more desktop features that I'd like to see added, most of which you mentioned. And since Thing and Jinnee obviously aren't very active projects, and the whole concept behind Teradesk is a simple TOS-like desktop with multitasking-friendly features rather than a full-blown modern one like you (and I) want, your option is the only one left, as far as I can see.

I know from the posts so far that a lot of people here seem to be content with what's out there. This worries me a bit. Whenever most people are content with what's there, nothing new happens. When nothing new happens, things get more and more stale, old, and far behind other platforms. By the time we wake up and see the need to modernize, we're so far behind that it'll take an even more monumental undertaking than if we'd started now. This is just my opinion, of course, but if you think about it, isn't it true?

Unfortunately, I can't help much from a programming aspect (as I'm not a programmer), but I'll do what I can. Hopefully we'll actually get some people on board with this!

For those who are interested, I've updated my website with more pics of my
highly modified Falcon CT60.

Just follow the Atari links.

When you're bored and don't have anything better to do... :-)

I've got a question for you Dr. Uwe.

Do you think a SCSI<->IDE converter
would have any broader application?

I mean, would anyone outside of the Atari
community be likely to have an interest?

I think the answer is probably 'No', especially
since the transfer rate is likely to be slow.

However, if there is likely to be a broader
interest in such a product it might offer
Alison more incentive to do it ;)

Actually, a more useful product might be
to do the conversion in the other direction,
and allow a SCSI drive to be read by a
standard IDE port. Every PC has IDE
ports, but not all have SCSI adaptors.

This is probably not a practical idea, though,
since the device would have to provide data
at a very high speed and it would probably
be easier just to buy a SCSI card for the PC.

Steve.

Hi Mark,

In my opinion it's always a good thing to work on improving anything, especially if it's an area of special interest. That is, something you'll love doing. You might come up with something original and useful. I guess the sign of success is when Microsoft 'borrows' you ideas for Windows 2010 or whatever.

So.. go for it. Of course, if you need volunteers to help I suppose you have to find some more true believers ;)

I'm not volunteering, btw ;) I'm officially an ex atarian now, since my ST/e has gone to a better home.

Steve.

512k, as you said, only 4 chips on the main board.
But on a daughter board, you can see DRAM chips. Ram accessed via HIMEM I believe.

> I have used it on a 4meg 1040 STe TOS 1.62 and it works well.

I had problems with my Mega STE building the DMA chain correctly.
I have a DMA HD Syquest 44(lancom), the CDAR (dma too) and then a kind of "link" interface with a 160Mb SCSI drive.

Plugging the Supercharger in first position, as said in the manual, would not work at MS Boot-> crash.
I spent lot of time trying to debug the program, no result.
Then I had the idea of changing the order, and after lots of plugs, I had it working this way:

Syquest -> CDAR -> Supercharger -> Link -> SCSI Drive.

> It would be possible to access the Net with the SuperCharger in DOS using

> version. It does E-Mail, FTP, News, TelNet, and Web in Text mode.

Yes but what if you have the ADSL with USB or Ethernet and a poor Atari with a serial output?

Guillaume.

Looking at this last board, you can see that it could be plugged into an ISA slot, am I right?
Looks like Beta Systems started developing the 286 board, with tests

into a real PC, then plugged it into the Supercharger.

    Guillaume.

Hi Mark,

> I wanted to write up a little post on my interest in starting a new
> desktop.

Some months ago, I had the same idea.

> I think that even Jinnee leaves much to be desired for our file
> interaction and the desktop is truly the heart and soul of the atari
> experience. Jinnee is in my opinion the best we have, but it is
> expensive, not free, and likely not going to be developed further.

I hate to announce something if I'm not sure but, after months(years?)
of negotiation and tons of mails, there is *maybe* a possibility that I
can buy the sources of Jinnee!

Off course, if I get the source code(I cross the fingers), the first
thing that I will do, is to put Jinnee under GPL.

> Now we have teradesk. An open source desktop. It's truly great in my opinion, rock solid, small footprint, and fills a void on older constrained systems. This is why I think a teradesk fork is what the doctor ordered.

The doctor did a bad diagnosis :)

> Some things I would like to see:
> Truecolor desktop backgrounds in any format using zView codecs to render.
> Truecolor icons in any format,

We have the same idea.

> but most importantly truecolor SVG...

Aarghh !! Do you know the CPU time needed to read (and to convert to a raster) a vectorial SVG?

Absolutely no usable on our computer (even on a 68060).

> I would tend to want a stock icon set of the tango project as, quite frankly, they're gorgeous: http://tango-project.org/Tango_Desktop_Project

I think that we *must* keep our personality.

> With the exception of drives which are links, the desktop will house REAL files and REAL folders and will be /users_home_folder/Desktop just like on gnome.

I totally agree with that.

> The icons should also be anti-aliased if it helps their appearance.

The anti-aliased icons need the transparency support in the VDI...
Actually only NVDI5 handles that.

> 3 styles of navigation.. OSX style with the multipaned window view, Nautilus/Atari style spatial navigation, and a full featured browser style navigation. The navigation styles could be loaded via plugins to reduce resources.

My idea is to put (in option) a "navigation frame" like zview.

Nothing more, nothing less... I don't want to transform jinnee in a monster that need tons of ram.

> OSX/Gdesklets style bouncing icon starterbar on the bottom of the screen.
> Perhaps a scriptable desktop widget system to complement that.

Well, if I get the source, I hope that others developers will help me :)

> Samba network browsing and URI parsing.

And FTP network browsing too.

Another feature that I want is the abstract access to various archives(lzh, zip, tgz, ...).

> Highwire should be able to be
> loaded and html be viewed within the desktop browser windows.

Hey dude, we are on Atari :)

> Tight freemint integration with package addition/removal built into
> preferences and perhaps a full application management/change tracking
> system. You could tell the desktop that you're about to install an
> application. It'll track the changes and provide a method for you to
> uninstall later.

I don't agree.

I want a Atari desktop usable on almost every 'modern' OS(I mean MiNT and Magic).. I don't want a KDE/Gnome like with things such RPM handling, etc...

Tiny, fast and powerful are the good words to describe that I would want.

> If you ever look at screenshots of amigaos and morphos
> it'll probably make you sad because it's so beautiful. I want that for us
> too.

Me too :)

> We have a LOT of programmers around.

??

> People I'd love to have help:
> ozk: bug hunting, general stability fixes and optimization. The work
> you've done to XaAES is no less than astounding. Perhaps assurance that
> someday it can be built on PPC?

I let Ozk to answer.

> Zorro: I like your style and I think zview/zweather is awesome, we'd need
> you to implement SVG support and recommend ways to implement zview codecs
> for such a heavy load.

Very easy to do.

> Would it cache every icon? etc.

Off course, we can't to decode every icons in realtime :)

> Eric Reboux: Busy with myaes I'm sure, but the xgem look is fantastic and
> I'd like to implement the fonts, gradients, shadows, etc.

Eric gives sometimes a hand in MyAES but he doesn't code anymore for our system :/

> I know there's enough demand for such a desktop

I'm sure that many Atarians wait a new modern desktop !

>, but
> the important question is how much time the gifted developers can spare
> from their current projects and lives and if they want to.

I hope only that we don't must to make this desktop from scratch.

Ciao,
Zorro

Zorro,

You must understand, I didn't even fathom the concept that we would be able to get the sourcecode to Jinnee! If that's possible absolutely positively I think we should use it! If we had the source to Jinnee (which I already consider quite close to perfection), the addons could be done just by you and me, there'd be no need to involve everyone because it wouldn't be so massive of a project. Out of curiosity, how much $$ are we talking about? hundreds of US$, thousands? Perhaps we could start a paypal donation center. I think a lot of people would donate a lot of money for a chance for open source jinnee.

Thanks,
Mark

Right !

We need also a good designer to draw some 'atari specific' icons :)

> Out of curiosity, how much $$ are we
> talking about? hundreds of US$, thousands?

500 Euros.

Now, I awaits a confirmation' mail from my "English to German"
translator(hi Sascha ;))

> Perhaps we could start a
> paypal donation center. I think a lot of people would donate a lot of
> money for a chance for open source jinnee.

Nope, I will be my contribution to the (remaining) Atarians.

Ciao,
Zorro

AFAIK, the MFP is EOL (at least at Motorola/Freescale, ST does not list it
also). That means that you will not get a lead-free version of the MFP, so
you can't build a new design containing the MFP that is ROHS compliant -
which is required if you want to sell the board to european customers after
Jul 1 2006.

I think emulating the required MFP functionality in some FPGA might be a
better solution.

cu

I pulled the old (large) power switch out and used the front of Radio
Shack's smallest project box to mount a momentary micro switch in the
same switch opening.  The box and the switch are black and look like
they were made for it!  I also used the headphone jack on the front
to mount an on/off switch for the CT60.

Just to be a bit more precise: The Link2 only supports SCSI devices that do not require the computer to have a SCSI ID of its own. It will work with most devices, but there are some that expect the computer to have a SCSI ID, e.g. some optical memory devices, but also some hard disk drives manufactured by IBM and Quantum (and probably others). These

```
devices will only work with a LINK96 or LINK97 adapter.

David Wade wrote:

> Doesn't the TT's built in SCSI adaptor support that?

Yes, it does, and the Falcon's SCSI hardware does as well, but in both cases hardware support is not enough. Initiator identification must also be supported by the hard disk driver. That's the reason why TT and Falcon cannot boot from drives that require initiator identification. The initial question was referring to a hard disk for the ST, and for the ST the choice of the Link adapter matters.

Don't know if it even works or not, just got the software from another
helpful Atarian, but yep, I got one.

Odd too - I won an auction on Ebay for some Atari magazines and the guy
threw in a bunch of extra stuff, like a Migraph hand scanner, Golden Image
finger/pointer scanner with DPaint 3 from EA, and the Supercharger.

Love when that happens. :-)

Hi Mikael,

Exxos and I have some things Atari hard disk related in the pipeline. Time, enthusiasm, and other commitments being the main stumbling block at the moment.

We're aiming for a transparant IDE interface to begin with. The IDE/CF coding is firmware/hardware complete, and the ACSI side is mostly hardware completed, the firmware coding still has to be finished. The SCSI bit comes next but is relatively straightforward. Most of the IDE/SCSI implementation is quite straightforward as once the electrical side of getting the commands/data back and forth is established, it's literally just a case of getting things in the right places at the right times and converting responses between the differing standards. Data is easy, the responses are a little more involved. The one I'm stuck on at the moment with standard ACSI (not hosted SCSI Uwe) is how the drive size and specs are determined, I'm guessing this is coded into the boot block. Time is the limiting factor as well as moving house atm.

Once we have finally developed the skills here the original project can be expanded upon.

There are things happening out there Mikael but with stumbling blocks and lack of hardware side documentation, as well as lots-of-enthusiastic-brains on the job, it's slow progress.

eBay is definitely the place to watch for the time being though. :-)

<snip>

Thats great news guys! I've thought for a long time that a current and
supported HD interface was really needed.

Thanks for your support. :-)

Remember what I (I think) I mentioned about determining the size of drives connected to the ACSI bus: The hard disk driver will take care of this, and it is not the concern of the ACSI-related hardware to provide any special functions for this.
All you have to do is implement the ACSI/SCSI command set, anything else will be handled by the hard disk drivers.

Yes but there is no ACSI command for determining drive size. Let's assume that we're not going to be using your drivers for a moment, so no SCSI support, just a plain old RLL on the end of the controller running with Atari's bog standard implementation. Bug free or not it can still determine the size of that drive when there is no documented electrical-sequence-of-1's-and-0s to do it.

I can't implement a 3rd party hardware solution if the computer throws something at it and it doesn't repond correctly. With most of these hardware things alot of it is trial and error as manufacturers will fall back on their drivers at every turn. ie, Implementing a wireless solution with the custom chips out there has to be one of the hardest things to do as the manufacturers insist that you pay extorniate investment fees to their name, and then the documentation you receive is non-existant, read the sci.electronics groups. The corporate market is not open and is highly protective of it's internal interfacing and source code. If I was a gigantic manufacturer I'd have paid Atari �250,000 for detailed hardware documentation and would have finished this 3 months ago.

It's a bit like putting a teenage driver in a car with no wheels on it.

I'm at the point now where I just couldn't care less after banging my head against a wall, hence, no interface. If it's that simple then I'd be grateful if someone else would do it and I'll pay them �50 for a little retail box which requires no soldering, programming of GAL chips and fiddling about. Just something which plugs into that ACSI port and gives me mass storage without third party drivers and specialist hacks.

I have no enthusiasm to do this anymore when all that ends up is argument without facts.

To add to this, <calms down>, if the Atari drivers issue a command of '1'
for example, then I have to tell my interface what to do. It's more that
for each of the ACSI/SCSI commands I have to 'interface' these to whatever
mass storage device is on the other end. So I need to know EXACTLY what
data and commands are going back and forth, and I have to entirely
understand those commands explicitly. If I can't calculate every possible
eventuality or possible blip then the interface will be unreliable with some
byte at some point amongst billions of transferred bytes. This is not

acceptable.

No it can't. For RLL onto ASCI there was a noxious file that contained the
cyl/track/sector data for each type of drive.
How it got encoded onto the drive I don't know, but it did. I don't have a
SCSI (actually SASI) to MFM/RLL controller any more to experiment!

Allison,

I dont know if you have seen the IDE Devil, you may want to check out the work that has been done on this project.   He has put the projet on hold due to lack of time(hope it doesnt die). Jookie has made alot of progress and his adapter is 85% functional. Maybe combine forces and get it working.

Here is a link to what he has:

http://neuron.tuke.sk/~nohaj/acsi-avr-ide/project_more_detailed_info/

Or you can use the toolbox lib and write software which uses the V30 as a
additional CPU for some calculations.

Regards
Michael

Don't know if this is still there or not, but Best Electronics has this
listed:

"Atari ST SCSI Adapter Cable This 2 1/2 foot DB19 Male to DB50 pin SCSI
adapter cable has the required interface electronics molded into the DB50
connector end of the cable. This cable will allow you to connect up to
your Atari ST systems most SCSI devices like Hard Drives and CD ROM's.
This adapter cable requires that Parity be disabled and 5 volt be present
on pin #26 of the SCSI device you are going to connect up to your Atari ST
system. This adapter cable works with the latest versions of Atari HDX 5
or above, ExtendDOS and so on. Adapter cable only, with no software.
CB102773 $75.00"

and in their hard driver section:

"For Atari 520ST/520STFM/1040ST/Mega 2 - 4/Stacy/MegaSTE/TT Computers,
External SCSI Hard Drives! These Best External ST Hard Drives are
Manufactured by Best Electronics using Recycled External Drive cases and

"Pulled" from Working Equipment Hard Drive Mechanisms! Each External Hard Drive is "Lock and Load" Ready to plug into your ST DB19 pin External Hard Drive port! Hard Drive Capacities in stock range from 200 - 500 Megabytes to 1 Gig! Atari ST External Hard Drive case with internal Power Supply/Fan, 110 Volt Power Cord, SCSI In and Out Connectors, 2 1/2 foot SCSI Adapter Cable (with built interface electronics) to Atari DMA Port. When you order, please tell us which ST Computer/TOS you have, so we can Customize the Hard Drive Boot Software to your exact ST System. CB103091 CALL or E-Mail"

HTHs.

Hi Ali,

> > > > a little more involved. The one I'm stuck on at the moment with
> > standard
> > > > ACSI (not hosted SCSI Uwe) is how the drive size and specs are
> > determined,

But there is a SCSI command that returns the drive size. (And other info, I think)

Of course, that's SCSI., not ACSI... But... I think most Atari HD driver software probably deals in SCSI commands, and not ACSI as such.

Which commands are available is determined 100% by the hardware that is connected. So... If you have a SCSI drive connected to the ACSI port via a host adapator, (as far as I know) the host adaptor will simply pass through any commands directly to the SCSI drive. So, it's the SCSI drive which interprets and responds to commands.

So, Ali... here's a thought for you. Find a SCSI drive that works with the (free) HD Driver of your choice, then find out what SCSI commands that drive provides, then provide the same set of commands.

You might even get away with just the standard ACSI commands plus, maybe.. the Read Capacity command. But.. Read Capacity is a 10 byte command, so I don't know if that will actually work. Actually, I can't see why it wouldn't... hmm. It's been too long ;)

> > Yes but there is no ACSI command for determining drive size. Let's assume
> > that we're not going to be using your drivers for a moment, so no SCSI

> determine
> > the size of that drive when there is no documented
> > electrical-sequence-of-1's-and-0s to do it.
> >

I agree with the Dr. There never was an ACSI command drive size, probably because when the ACSI command set was made the drives didn't know their own size.

ACSI never changed, but SUPRA/ICD etc. simply started using 'proper' SCSI commands as the drives that supported them came into use.

So.. It's only a software issue.. If your hardware

emulates a basic SCSI command set (less basic that ACSI,
though) then any decent HD driver should be able to
access your hardware.

The ICD software came with a little utility that
I assume ICD had first written for in-house use.
It allows you to send *any* SCSI command to
any device and observe the results and sense data.

> > the manufacturers insist that you pay extorniate investment fees to their

techie_alison wrote:

> Yes but there is no ACSI command for determining drive size. Let's assume

This does not matter. If your hardware implements all the mandatory SCSI
commands that can be executed by devices connected to the ACSI port
(i.e. the lower SCSI command classes) there is nothing more to do on
your side. The hard disk driver software will take care of the rest.

The mandatory commands for hard disk devices listed in the SCSI-3 specification and available with ACSI are: $01, $03, $04, $08, $0A, $12, $1B, $1D, $1E. Those only available with real SCSI are: $25, $28, $2A, $2F, $35.
So for an ACSI emulation only 9 commands have to be implemented and $25 (READ CAPACITY) is not needed at all. Note, however, that with these 9 commands you can only access the first GByte of a drive. In order to access more than that you also have to implement the other 5 commands. If you do not do this and your hardware only supports 1 GByte I doubt that there will be much interest in it because current IDE drives are much larger and most users will want to access more than just the first GByte.

Actually I cannot say more than that because it's as easy as that. You are thinking about issues that will be handled by the hard disk driver software and do not have to be handled by your hardware. The only thing your hardware is responsible for is properly implementing the mandatory SCSI commands and it must properly refuse (correct SCSI error message) any non-mandatory command that is not implemented. Everything else will work then.

You mean the WINCAP.TXT (or something like this) file. Note that this file was only relevant for old versions of AHDI, not for any other hard disk driver. Even the old RLL drives can be handled without using such a file.

It's easier than that: Any SCSI drive must implement the mandatory hard disk device SCSI commands listed in the SCSI specification. I have listed them in my last posting. These are the commands HDDRIVER and other drivers use.

>   You might even get away with just the standard

> ACSI commands plus, maybe.. the Read Capacity

> I can't see why it wouldn't... hmm. It's been too long ;)

It does not work with ACSI unless one is using a Link compatible adapter. But even without this command hard disk software is able to determine the drive size.
But let me say this once again: The 10-byte-SCSI-commands are required to access more than 1 GByte of a drive.

>   The ICD software came with a little utility that
> I assume ICD had first written for in-house use.
> It allows you to send *any* SCSI command to
> any device and observe the results and sense data.

You can also do that with the SCSI Driver interface implemented by HDDRIVER and CBHD. HDDRIVER even includes a tool that lists commands and their results using SYS_MON.
There is no need at all to guess these commands, though, because the SCSI specification explains them in detail and also lists the commands that have to be implemented.

In the last two years or so three people have contacted me because they wanted to design an IDE to SCSI/ACSI converter. None of them was willing to have a close look at the IDE and SCSI specifications. This is bad because without thorough knowledge about these protocols one cannot design the required hardware.
All that I could say about the requirements (and much more that is relevant) is listed in detail in those documentations. They are the reference, not a piece of software like HDDRIVER. HDDRIVER, like any other driver, does nothing more but rely on the propler implementation of these commands.

Finally note that an application may send any SCSI command to a hard disk driver using the SCSI Driver. This means it is not sufficient to implement your own choice of commands instead of what the SCSI specification mandates. An adapter must cops with any command, execute those that are mandatory properly, and refuse those that are not implemented properly, i.e. with a proper SCSI error message.

Sorry for step into (I'm a layman) but I would like to learn ;) You are
saying that commands $25, $28, $2A, $2F, $35 which are not in the ACSI
standard can be sent to any hardware through the ACSI port aren't you?
And it doesn't matter how the drivers determine the disk sizes, if the
hardware can respond to these commands (plus the ACSI ones) then
everything will be fine.

Anyone has it ?
I'm looking for that kind of software that was used to play Dragon's Lair or
Space Ace directly from the Sofware Corner version of this laserdisc game.
This software managed to play the laserdisc.
Thanks
Alessandro

I'm coming around to your way of thinking Uwe, in that just forgetting the strict ACSI adherance and going for the subset which includes the basic and additional commands.

From a financial standpoint I stand to recoup my costs if releasing a standard SCSI host adapter per-se, as opposed to an IDE hybrid. That doesn't stop me writing a version which manages a low-cost SCSI <> IDE adapter however, which allows a CF card slot to be hidden in the 'casing'.

My real aim here is to be able to use my ST for MIDI without having to listen to a HDD. As for buying a Link2, far far too expensive.

A new readily available SCSI host adapter with 'extras', with the code at hand, and which isn't sold at prices bordering on extortion. Nice thought.. We're onto the high-MIPS microcontrollers now with lots of I/O so we've sorted that one out.

The extortionate prices are only charged by those trying to make a living or supplement their income on these low volume production runs. The only reason the Link's are so expensive now is because they're rare and everyone knows it. Laws of supply and demand are such a pain ;)

Thanks,
Mark

Hey guys,

I don't know if you've ever seen the M5485EVB but it's the motorola evaluation board system. It's just an IO setup in a nice Mini ITX form factor. Comes with Ethernet, PCI, USB 2.0, graphics chipset and more. It takes several different configurations of Coldfire chip + RAM on system on chip modules. The whole shebang costs between $900 and $1200 with different options.

Now understand, I love the idea of a home-made coldfire machine that solves our needs perfectly, but MiNT already runs on the evaluation hardware... Why not just call this evaluation board a hardware platform for us? It boots linux too ;) Why not just have everyone buy this.. Perhaps we could get a run of 100 of them at discount from motorola. Seems easy enough to me. Why waste years and years in unnecessary hardware development? Or do people do the hardware because they're afraid of the software ;)

Thanks,
Mark

Joe Iron wrote:

> Sorry for step into (I'm a layman) but I would like to learn ;) You are saying that commands $25, $28, $2A, $2F, $35 which are not in the ACSI standard can be sent to any hardware through the ACSI port aren't you?

No, not by any hardware, but only by adapters comptable to the ICD Link, like LiNK96/97. These adapters implement a proprietary protocol extension, which provides for sending any SCSI command via ACSI. Additionally, the hard disk driver must support this proprietary method, i.e. you need both: An ICD compatible adapter and the software that knows how the proprietary protocol works. Information about this protocol is readily available, everybody who has contacted me knows about it. It is quite simple: If one wants to send a 10-or-more-byte command one simply send an additional byte $1F as the first command byte, followed by the actual command bytes. This way any SCSI command can be sent via ACSI, but this only works with ICD compatible adapters.

HDDRIVER makes use of this proprietary extension, and other drivers to as well. Most drivers do, actually, except AHDI.

> And it doesn't matter how the drivers determine the disk sizes, if the hardware can respond to these commands (plus the ACSI ones) then everything will be fine.

Everything will even be fine without these additional commands. In other words: If a hard disk driver wants to determine the disk size it can do so without these additional commands. But a hard disk driver can *not* access more than the first GByte of a drive with these additional commands.

Just go for SCSI as far as the command set is concerned, forget ACSI.
ACSI is only relevant in terms of the bus protocol required by the
hardware. The software protocol is irrelevant, i.e. there is no use in
trying to mimic the behavior of RLL drives.

The fact that several people have tried to design Link adapters or IDE/SCSI adapters of their own for the last few years, but nobody of them has yet presented a working device, shows that this is probably not so trivial. The Link adapters are most likely worth their price.

David Wade wrote:
```

> What about the TT interface. As this is "real scsi" can these commands be
> sent?

Yes, TT and Falcon (and the Milan as well) have a standard SCSI interface. Any command can be sent without restriction. They also support receiving of SCSI commands. You can, for instance, connect two TTs/Falcons to the same bus (with different SCSI ID, of course) and then can send SCSI commands from one computer to the other. The SCSI Driver specification covers this topic. HDDRIVER is the only driver, though, implementing this feature.
The simplest use of this feature can be observed if you reboot one of the computers. Assume that you have connected a TT and a Falcon via SCSI and you reboot the TT. In this case HDDRIVER running on the Falcon will not only display the available hard disk drives, but it will also detected the TT and display it like any other SCSI device. The same applies when running HDDRUTIL's ID check. In the HDDRIVER 8 manual there is a screenshot showing the output. (In the Device Check chapter.)
Something like this is displayed by the Falcon if the Falcon has SCSI ID 6 and the TT has SCSI ID 7:

```
Bus 1: Atari SCSI
   00:00: QUANTUM TRB850S        0403  Direct Access
   06:00: Atari Falcon HDDRIVER  0817  Processor
   07:00: Atari TT     HDDRIVER  0817  Processor
```

All in all one can implement proprietary SCSI commands with this feature, e.g. for a SCSI network. Nobody has ever shown any interest in this, though.

I bet it would be pretty fast too, wouldn't it!

Ronald J. Hall wrote:

> I bet it would be pretty fast too, wouldn't it!

Yes, it would be the fastest possible network for TT and Falcon because
the SCSI bus is the fastest interface both have in common.
It would not work for any other Atari machine, though, because the only
existing implementation for the SCSI Driver's target interface are the
one in HDDRIVER for TT and Falcon. The restricted ACSI hardware does not
support this feature, and as far as the Milan is concerned the Milan's
SCSI Driver does not implement it.
In any case, writing code using this feature requires profound knowledge
in the SCSI protocol in order to properly implement the code required
for the callbacks called during the SCSI interrupt.

We already thought to this EVB...
The problem was the price for everybody...

What is the price you could get from Freescale if you order 100 ???

Maybe a good question....

Well now you can't be serious right? ACP machine will probably cost $1200 right? (even though the CPU itself is $25). EVB is $930 and best SOM (5485 with MMU and 200MHz) is $365 (or $390). This makes total price of: $1295. How much cheaper can a custom solution go?

I guess it would be har5d to find decent megafile 20, 30, or 60 Mb drive, maybe
you could find acsi->scsi adapter like Link
and external scsi hdd...

I would happily pay that amount for such a machine.

I dont care abour the casing. I probably will screw the bourd
on top of my desk and put a glass bowl over it.

I threw out some adscsi ICD adapters just yesterday - thought no-one
would want one any more, never used in their boxes too.

Yeah I mean. I know it seems steep, but people perfectly happily pay
$800 plus for a PC or $3000 for a mac. Is $1300 really unreasonable?

I say hell yeah, why not declare this a supported platform and build
a software foundation for coldfire while the real machine is being
built.

People who think the price is too steep can just not buy it and wait
to support hardware developers.. And everyone with the cash to buy
the EVB will buy the acp anyway ;) I know I probably would...
but then I like to sell stuff to finance these things.

Thanks,
Mark

I have yet another genlock called "ST-PAL" it appears to be french
made, and works a treat.

I have been looking for a ATARI ST/E to buy and they almost always sells
with a monitor. But monitors are heavy and therefore the shipping is
expensive, now I wonder can you connect a PC monitor to the ATARI and
still get high resoultion?

Mikael

Yes you can, you will need an ST-VGA adaptor and you will only be able to use High resolution.
Several Atari outlets stock them, the first one that comes to mind is Atari Workshop http://www.atari-workshop.co.uk or check with you usual Atari supplier.

I think you can use a ST-high res with a small adapter with a normal PC
monitor, if you want med or low then you will either need a scan converter
box or a multisync monitor which supports 15khz scanrates.

Hello,

I'm looking for ram expansions for MegaSTE (>4Mb!) or a graphic card (VME).

Has anyone such a thing?

Guillaume.

Actually I would pay $1295 for a new machine. That beats the $4000 I payed for the Hades I have.

I agree, let's have it now. It happily runs Mint, so why not. I emailed some
of the people on the project on how it was going and never received an answer.
Anyone else try?

>Mikael

Yes, it is possible to connect an Atari ST(e) to a PC VGA monitor. For use in color, I use an old piece of Atari hardware called Video Key. It connects to the ST and has a composite-video out port on it. I just connect that to a video converter and from there to a PC monitor. It works fine for low and med res, but for high res there is a simple adaptor that plugs right into the ST that goes directly to the PC monitor. That works great also.

Again, you lucky dog. I tried so hard to get one of those and just could not find one available. Now, on the Hades, I use Software PC and that work fine. It will run most any 286 and some 386 applications.

Several hard disk drivers may work, but HDDRIVER is the only one
supporting special ZIP/JAZ functions like sleep mode or password protection.

> Does HD Driver see these Devices as Hard Drives?

Yes, just like any other removable media drive. ZIP/JAZ drives are
nothing special compared with other SCSI drives except for some
additional functions like password protection.

> I have heard folks refer to Cartridges when talking about these drives.
> What type of Media do these actually use?

The special removable media manufactured for these drives.

By the way, with the Falcon or an ST with IDE interface you can also use
the ATAPI version of the ZIP drive instead of the SCSI version. As far
as I can remember the ZIP was available for both SCSI and ATAPI.
You can *not* use the parallel port version.

Hello

I managed to find a bargain priced Falcon just before Christmas on Ebay (UK), it had a 'Buy now' of �125 so I brought it :-) after losing on several auctions as prices approached �300 recently, only downside is that it is French so the keyboard as AZERTY and only 1 MB of rma is onboard.

But now to my story of sadness.... all I can do is see a screen image (TV) as I have no Mouse, or a Falcon video Adapter would someone on here not too many hours from Hampshire, UK, let me pick up an Atari compatible mouse and an Atari Falcon Video adapter? give me a price as I'd love to get this going ASAP

Even better if someone has a 4 meg card for it as well

Thanks (don't reply to this)

My Hades has the same printer port as a ST I believe. I was able to get my wife's HP LaserJet 2100 to work. I was using NVDI 5 which has a number of other HP Laserjet drives in it. I did not try any graphics, but the text came out fine.

Hmm, okay. I guess I should have been more specific in my first post guys. What I had in mind was the faster ports on a Mega STe. So would HSModem intercept between, say BBS software hard-coded for serial port 1, and fool that software into thinking its getting serial port 1 when its actually one of the faster ports?

Thanks.

I was afraid of something like that. Charter seems to suck vacuum in some aspects, but I love their hi-speed cable service, and its the only game in town here (no DSL available). Heck, I even got a "you're blacklisted" msg from Xchat one night just trying to logon to a couple of those servers.

hey phantom ,make time and read up on these ,why don't you have time .  i've
spent three years doing so and its great , its not a program a person can
rush right into ,you're a fool not to spent any time at it. makes music
production alot easier and if the user desires"breaks it down"on any  level
, utilizies all functions ...showing  hiden areas where we can manipulate
and self generate creativness. now my next step is to write my own
applications for use within the programs  known as  .mod ' s.

charles
whats so important other than what you've intended on doing .

Yes, I looked at this. Wouldn't mind having one of those.

I also have Emagics Logic Atari with the LOG3 Cart and UNITOR II Cart.
Can these Carts be used with Cubase Audio or SCORE for MIDI stuff?

I am, making time. But my plate is already full. I got Emagics Logic
with
Log3 cart and Unitor II cart around the same time as the
Cubase Audio Falcon stuff.

I have used it in the past, just never had the complete docs and
extra stuff for it.

I would think any HP that has a parallel port would work. All are
backwards compatible with PCL5.

>
\>Guys, is there any software out there that will step in, take any software
\>looking for serial port 1 and redirect it to another (faster) serial port?

Possibly. It all depends on the software that's writing to the serial port. If it's using the BIOS/XBIOS routines, it should be possible to alter the mapping of the serial devices so what it thinks is serial port 1 (MFP) is actually one of the faster ports on either a Falcon, a TT, or a Mega STE. In theory, it should be a very quick, and probably no more than 5 minute, SMOP[0][1]. Doesn't mean that it really will be though.

On the other hand, if it's writing straight to the MFP, bypassing the routines to gain a little extra speed, the answer is probably no.

[0] Small Matter Of Programming. The nice way of describing what to laymen should be simple job, but often turns out to be rather complex.

[1] I have an idea how this could be implemented, including a method of swapping back to the proper device layout, but no way to actually test this out[2]. My idea would be to swap the entries for the serial port 1 and the faster serial port in the Bconin_vec, Bconout_vec, Bconstat_vec, and Bcostat_vec tables. Setting a cookie, if one isn't already present, to show they've been swapped is probably a good idea as well.

[2] Both my Atari machines are in storage and not easily accessible.

Regards,   And have a Happy New Year
   David Bolt

3 days left in the AFL Football tourney on The DarkForce! BBS folks...

You've still got time to enter into a division and make it into the playoffs.

One lucky player will take home a $25 prize! :-)

Hello,

I don't know if this would be useful to anyone. We're moving house in a few weeks time into a studio flat so my old clutter is a no-no.

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8748340308

Thanks,

TA

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

Hey everyone,

I've been looking around and it looks pretty definitive that there's a resurgence interest in BBS's in general and on Atari's. This is what I've learned as kind of a wrapup for other people.

There are several ways to connect an Atari BBS to the internet. One, at http://www.coldwinterknights.net is STiNGadel. I was a bit skeptical but this simplistic BBS is rather addictive in design and obviously reliable in that it's still up since the announcement back in July of 2005. Unlike other Atari BBS's it's truly multi-line and now multi-line on the internet.

Darkforce BBS is now up, telnet://bbs.darkforce.org. This is a BBS express BBS and uses a different strategy. Basically just a device that is a simulated modem that converts it to telnet. One side consists of a serial port, the other side is an ethernet cable. I think the device is setup with a web browser on a pc or something. This also works QUITE well and the darkforce BBS is alive right now.

Then there's my BBS, Atari-source.com BBS which was running on octopus bbs. If it ever comes back up, it'll be at telnet://bbs.atari-source.com. Now, I always liked Octopus because the ENTIRE BBS is fully scriptable using a VERY slick scripting language. It also fully supports fidonet mail AND I managed to compile the internet fido mailer, Binkd on my falcon and it works tested with fidotel bbs. Thus I expect to be able to bring the atari-source.com bbs back up sometime and actually be a full fido hub. Believe it or not, there's still atari activity in fido message groups.

Recoding octopus was my first C project ever. I have like 30 copies of the source lying around with different modifications and some of the code is not high quality, and the telnet conversion is only as finished as it needs to be for proof of concept purposes. I never tested the multi-line features (though octopus supports it!) and many things don't work. After my current work on SUM and http://dev.sparemint.org I'm going to go back to polishing octopus to be a useable product, then I'm going to make a web guide to kind of show off just how powerful it is. I don't think people even understand just how amazing of a bbs package this is. I'll also be using CVS as with GIM and SUM it's really helped out the development. I just have to figure out how to isolate that source from GNU source of GIM and SUM because Koos Kuil, the original author, wished for it to not be made GNU GPL even though it is now freeware.

One of the problem with telnet bbs's is the fact that the bbs is no longer using a modem. Most things interacting aren't designed for this. Thus you'll need a special internet mailer (which we have now) if you're going to do that, and any doors or file transfer tools will need to understand and use the tcp connection. I don't even know if it's possible to hand off an open tcp connection from one application to another but I suspect it is!

Because of this, file transfer and doors don't work yet on octopus (and probably not on stingadel). Darkforce chose the perhaps cooler solution and converted the serial to ethernet directly so everything works, but he loses easy multi-line ability, and loses a very fast bbs made possible through telnet and direct ethernet.

So in addition to giving Kudos to the STingadel author and Ronald for their ingenuity, I just wanted to let people know that they can expect the following... eventually ;)

Octopus will have full internet based fido support with a guide.
It will have fully working internet based file transfers (for telnet terminals that support zmodem like hyperterminal).
I'll be making an installation guide for octopus on http://www.atari-source.org
I don't even know what doors exist for the Atari but perhaps if we can't get our hands on the source code maybe the serial i/o can be redirected.

Anyway.. This is vintage cool for sure ;)

Thanks,
Mark

The app I mentioned could redirect. The Falcon does not have a low speed
(MFP) port. So this app redirected to serial 1 (SCC). However it did not
go beyond 19,200 (MFP speeds).
Hsmodem is only a serial port patch. use it in conjunction with
Steno/Stalker or similar you can talk to any avaliable port at full speed.

You can use a PC with any java compliant web browser, or you can also
telnet directly into the device through a local port. Both work great.

<snip>

Exactly. Thats the part I hate. Its also why I've been trying to find ways
to redirect serial port output/input. I've got a Mega STe, so I've got the
faster serial ports. The Lantronix UDS10 serial converter supports speeds
up to 115k so thats ready as well. I just can't figure out how to get my
software, BBS Express ST, which is hard-coded to serial port 1, to see the
faster ports. Of course this does not solve multi-line capability. I doubt
Express will ever do that.

> So in addition to giving Kudos to the STingadel author and Ronald for

Mark, you get Octopus doing all that and I'll be tempted to switch! :-)

BTW, I have to give credit where credit is due - the 8bit crowd from
comp.sys.atari.8bit are the ones who gave me the idea for using the
Lantronix UDS10, seems several there use it for their BBSs as well as for
directly FTP'ing and telneting with their trusty 'ole 8bits... :-)

<snip>

Sorry NO!. See http://www.csgnetwork.com/hppclhist.html. The 3000 series
seems to support both 5 and 6 though. I wonder if they need to be set in
pcl5 mode ?

If you really want higher modem port speeds, see the Atari Workshop for an
RSVE, from the author of HSmodem. Four wires to connect, three chips on a
small board, and an ST will do 115200. This circuit, it is said, works for
the Modem 1 Port of a MegaSTE or TT, which it should, since it connects to
to the MFP. Yes, this is a top post. Get a bigger monitor.

That's interesting. Did you find any information on the available
interfaces of the 3000. I found that is does not have a parallel
interface but only USB, which would of course mean that you cannot use
it with an Atari regardless of the PCL level.

Like many of the HP printers there is a slot into which an optional
parallell adaptor can be plugged.
See:-

http://h20000.www2.hp.com/bizsupport/TechSupport/Document.jsp?
lang=en&cc=us&objectID=c00491908

&

http://www.hp.com/hpinfo/newsroom/press/2005/051017a.html

It seems a bit odd but in many situations its better to have a network
interface on a printer rather than a centronics port

I remember that Cubase Score is included into CAF.

> What is the latest version of Cubase Audio Falcon and Cubase Score if
> its a different program?

Last Cubase Audio update is 2.06.

> Can one still get updates to Cubase Audio Falcon and related programs
> from Steinberg?

No, for Steinberg, Atari computers is a very old story.

> Can one still get Cubase related hardware for the Falcon from Steinberg?

No, I don't think.

> Correct me if I am wrong, but I think there is 2 versions of Cubase, one
> for the Falcon and one
> for the Atari ST/STE/Mega?

Yes, Cubase Audio is very dedicated to the Falcon (except Cubase Audio for
CBX-D5).

> Any help is appreciated, E-mail me if you happen to have one or more of
> the above items for sale
> or trade.

I 've just bought an original Cubase Audio box and modified the Falcon
inputs.

I planned to enhance (hack) Cubase audio to provide new useful features for
me.
I 've already done a little patch which enables the 49170 Hz recording with
CAF.
But at the moment, I'm busy with Studio Son improvements...

Let us know what CAF hacks or Studio Son improvements you make, some of us would love to see new updates for Falcon hard disk recording, especially with a CT60

Does anyone know if there was a version of LORD for Atari BBSs? If so,
where can I download or buy it? Thanks!

A network interface has several advantages, e.g. higher speed, more intelligence and, of course, if one has several computers they can all use the same printer without depending on another computer acting as printer server.

Currently, I'm working on Resampling and Filtering into Studio Son.
Now, my code is optimized enough to perform a quick treatement.
My work is done to work on 68030 and 56001.
The Resampling process is currently done with a Linear Interpolation followed by an optionnal Digital Low Pass Filter.
This work is done with only one DSP program to increase the process.

The Filter optimization is remaining, but it's a simpliest version of Resampling.

Also, I'm correcting little bugs of Studio Son.

For Cubase Audio, I have ideas but I don't want to tell more because it's a future work.

I received requests about CT60, but at the moment, it's not my first
problem.

I recently picked up some old Atari magazines in an auction on Ebay. The
seller was nice enough to throw in some extra "goodies". This included a
Supercharger by Talon Tech. I've never used one of these before. Anyone
have any idea where I might acquire some software and docs for it?

Thanks much.

You can find my first release 2.08b (only in French):

http://files.dhs.nu/files_msx/std208b.zip

Be careful, it's a beta release !
There is a volume bug when you filters monophonic files.
The filters are not optimized.

You guys crack me up with the retro trolling.  :D  Next thing you know,
people will be taunting former TI-99/4A users.

```

Saw some news coverage today of a new "Zero FootPrint PC" from a company called Cybernet being marketed at the 2006 Consumer Electronics Show. It is an all-in-one case design that I found quite reminiscent of the Atari ST/STE/Falcon. Yet another example of Atari computers being well ahead of their time?

Company webpage is at http://www.cybernetman.com/

>No its not. The MegaSte's serial port is not reliable above 56k, while

That's not true. A MSTE is always capable of doing 115k at 16Mhz.

Well, I'll reply here anyhow.

Atari mice are getting a bit hard to find and can be costly. A better idea is to use an Eiffel (http://satantronic.atari.sk/) or PeST (was here: http://www.cps-electronics.co.uk/web/closed.htm , but the site seems to be down -- try contacting "Exxos" on this forum) and a PS2 mouse.

As for a video adapter, note that there are two types -- ST monitor style and VGA monitor style. Best Electronics in California has both (as may others). There is a fellow on EBay from Poland (Jurekdudek) selling them for a little over $20US. (I have not done business with him myself).

Now to the memory card. 4Mb cards are pretty common -- in fact, I have one lying around. 14Mb cards are (at least were recently) being made here: http://www.volny.cz/boban07/RAM_kartice/ . They are around $50US.

If you fully outfit your Falcon with PeST/VGA/14Mb, you'll probably spend another $100US or so, but I think you'd find it worthwhile. Substituting a mouse from Ebay and a 4 Mb card from someone's spare box would probably cut your cost down to $50.

Galen

The ST case was *much* more stylish, I think! The really funny thing is
how the site seems to think that the design is so revolutionary! I
guess they've never seen an Atari, Commodore, or even an Apple computer
for that matter.

Yeah, I kind of see what you mean. Still, I like the ST/STe/Falcon look
better, but it is nice to see something like this. Who knows, maybe the
designers used to own or saw one of the Atari computers.

 Phototip is what I use mostly to edit GIF, JPG and other files. View, at the
 moment, is very good for viewing.

I have seen the docs on the Internet on one of the Atari sites. I wanted to get one of these, but never found one. It was a device that had a PC chip in it and allow an Atari to run PC programs or something like that. From what I remember there were two version, a 286 version and a 386 version.

  Exactly. And that years ago there was EuroPC in similar case as well, so
PC line machine 15y ago, not what they say  that progress now allow this ;)
If u ask me, it just oversized laptop...

Hi Edward, thanks for the reply. Can you remember which site it was? I've
googled a couple of times but came up empty. Thanks!

The rear of the PC certainly reminds me of my Falcon.

Next a 'PCstacy' will come out.... oh yeah, they are here and called
laptops.

:)

Mark

HP printers that have PCL5 appear to work fine on Ataris, whose NVDI actually sends PCL3 and PCL4 compliant commands. (Of course, that means you need to have a parallel port.)   PCL6 is not backwards compatible.

I use Brother Laser Printer, it does not understand the Epson codes from
STWriter but will print normal pica. Marcel the other WP I use has no
problem with this Brother printer.

There's some extra modules on my web site BTW- I don't know if they're
also included with the main distribution.

Are you talking about that supercharger?
http://perso.wanadoo.fr/gtello/supch_e.htm

If so, I have what you need!
Only two versions I think: NECV30 (8086 +) and 286 (rare! whit a daughter board with a 286 plugged into the 8086 slot!).

Guillaume.

Well, I'll reply here anyhow.

Atari mice are getting a bit hard to find and can be costly. A better idea is to use an Eiffel (http://satantronic.atari.sk/) or PeST (was here: http://www.cps-electronics.co.uk/web/closed.htm , but the site seems to be down -- try contacting "Exxos" on this forum) and a PS2 mouse.

As for a video adapter, note that there are two types -- ST monitor style and VGA monitor style. Best Electronics in California has both (as may others). There is a fellow on EBay from Poland (Jurekdudek) selling them for a little over $20US. (I have not done business with him myself).

Now to the memory card. 4Mb cards are pretty common -- in fact, I have one lying around. 14Mb cards are (at least were recently) being made here: http://www.volny.cz/boban07/RAM_kartice/ . They are around $50US.

If you fully outfit your Falcon with PeST/VGA/14Mb, you'll probably spend another $100US or so, but I think you'd find it worthwhile. Substituting a mouse from Ebay and a 4 Mb card from someone's spare box would probably cut your cost down to $50.

Galen

Just as a note, CPS site is closed down, Pest pages have been moved to

http://pest.atari.org Other CPS based kits will also be moved over to
atari.org when I get time :S

about 15 years ago I had a Atari ST 512. Which I upgraded to a the crazy
1024 mb ram.

I remember dreaming about gettinga harddisk for it?

What differnt harddisk were there??

If I want to get a new used Atari ST, what differnt harddisk should I look
for?

Mikael

Hi Mikael! A hard disk is definitely a "dream" for the way your Atari computer will work.

Try to find a slightly older SCSI drive in an external case, with a power supply. Depending on what TOS version you wind up with, will determine how much of the drives space it can see/use.

To me, the the hardest part is finding a HD adapter/controller like ICDs Link2. They are no longer made, AFAIK.

If not that, perhaps you can find one of the older Atari branded models like the Megafile 20, 30, or 60. They are pretty old now but every now and then you can find one in good shape.

If you can get something like a Mega STE, Falcon, or one of the Atari clones, you will have a SCSI controller already onboard. The Mega STEs controller is somewhat limited though.

The Falcon and Atari clones can use IDE hard drives as well.

I'd check the For sale/swap places on Atari web sites, as well as the
newsgroups and definitely Ebay. Always lots of different things on Ebay.

Yep, thats it. I've not taken it apart (yet) to see whats inside though.

Since I'm not familiar with it at all, I'd like to ask - does it take over
your whole system, in other words you boot into a DOS or Windows
environment, or can you boot up into Atari, as normal, and then access it?

Thanks much!

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

What model is your Brother printer? Until just recently the Brother
had IBM Proprinter and PCL 4 emulation. Also, are you using NVDI?

(Note: Modern Brother printers have only PCL 6 emulation. I do not
know how compatible that is with Ataris.)

Galen

:-)

I've got an English version of MagiCMacX on my hard drive which I must
upload to the site one day; it just replaces the original German app.

You boot under TOS. Then, at any time you like, you launch ABIO.TOS and you boot your Supercharger under MS-DOS (you can have a dos partition with the PC system on it or just boot with floppies).

Under DOS you have a key combination or a little tool called TOS.COM to go back to Atari. And then, next time you run ABIO.TOS you find your supercharger in the same state as you left it: under dos or windows.

If you use ABIO.ACC, when you swap from PC to Atari, the PC goes on working (no pause!).

Guillaume.

That certainly sounds interesting! Does the file on your site,
"SUPERCHG.ZIP" contain all thats needed? (Besides DOS or Windows of course)

Thanks!

Okay. More than likely, a Mega STe. I've got a CT60 Falcon and a Mega ST
as well but the Mega runs my BBS, and the Falcon is my personal "pet"...so
they are pretty tied up... :-)

Thanks.

For those reading this with passion (hem...) the Supercharger can emulate CGA and Hercules Graphics. But, disassembling the software, I could see that the "Olivetti" graphic mode was planned to be supported. Never ended... You can try SETVIDEO C (for CGA), SETVIDEO H (for hercules) but also the undocumented SETVIDEO O (for olivetti).

Guillaume.

As discussed earlier its not good. You need PCL5 or less. PCL6 is not
backwords compatible.

One neat feature of the supercharger is that the Ram in the supercharger
its self can be used
in normal Atari mode, for a RAM Disk or whatever.

You can have a 4meg machine and use the 512K in the SuperCharger as a
Ram Disk.

There is also a socket for a Co-Processor.
I used one out of a old 286 computer in mine. I don't have the 286
upgrade, but would like
to find one, or a 386/486 if they were made. I have seen advertisements
for the sell of
the 386 and 486 versions. But don't know if they were ever made.

I have the original disks and manual which is fairly thick.
I've used it some, but mostly use the FalconSpeed board or ATonce 386SX
in my MegaSTe.

Not sure, but I think it was the University of Michigan site.

It you can find a Link2 then you could hook any SCSI drive to your ST with ease. I have one for my STe and it has been working great for about 4 years now.

CiH posted on www.dhs.nu and asked people to write their 2006 wishlist.

My no. 1 wish was continued Xaaes/FreeMiNT development :-)

I've been using Xaaes as my only AES for the last 6 months, and it really gives me a reason to continue using this computer. I almost didn't touch my Atari for 2 years - now I use it on a daily basis (thanks to Xaaes).

It hardly ever crashes (except when provoked by my bad programming), it looks pretty, it's fast, it maintains that warm fuzzy Atari feeling but still looks and feels like a modern environment should do. Above all, it's still developed and supported, and each new release gives me a surprised look on my face. I'm so impressed by the whole effort.

If you haven't already tried it, please do. Take some time to set it up properly.

CHILL. POUR. ADMIRE. (Well, that's Guinness, but anyway..)

Not sure what you mean here ? Did you send other mail to me - if so it
would not have reached me. Zetnet Pop3 mail server is down as far as
fetching mail is concerned - might get it back tomorrow.

>http://www.geocities.com/wjdegraaf_geo/mc303/cubase/cubasev2atari.zip

I've been told that Cubase 2 is not usable on Falcons anyway. Cubase 3
should be OK on a stock Falcon, but there does not seem to be any data on
the compatibility of Cubase Midi with CT60 on Rodolphe's site.

If your link above is to enable downloading of Cubase, then it must be a
hacked version. Proper versions of Cubase need a copy-protection dongle.
Hacked versions are known to be unstable as well as illegal.

Paul

I e-mailed you a couple of times yesterday, but haven't heard from you.
Not easy, I know, as my e-amil collection server is down - proably until
tomorrow - but I left some other contact details.

Could you post here, just to confirm whether or not you got my mails ?

Thanks.

Well, if it's a case of finding a server to connect to, try
irc.stealth.net. Works ok for me.

If a software is not in the tested software list, it does not mean that it is not compatible...it simply means that nobody was ok to try and/or report to me a test !

I see no reason for a MIDI software to not be compatible with a falcon + CT60.

Regards

Cubase2 does not work on TT-Atari Machines.

>

Illegal only due to aggressive Steinberg marketing. That�s their fault.

Only because not many people do not drive a 1974 Mercedes Benz anymore,
I would not stop selling Gasoline to them. Or?

It�s a not normal company and I have not the slightest idea why they don�t sell the ATARI ST/TT/Falcon Versions they had and still have. A 60�s or 70�s Car is also not build anymore, eh!? And there are still parts available for the ST/etc, and new parts too. e.g. CT60

I hope they will change their minds at Steinberg and make a fine ATARI MIDI-Bundle with newest versions (maybe also a 060-checked version, why not?) and any other you need, for the best MIDI Hardware I know. They could only win, IMO. The Software is already finished!

I expect the ST or MegaST and STE works best at MIDI. We tried in the mid 90�s how fast can the ST (1024ST, 1MB RAM, Floppy, SM124) play..... well, that what I heard is faster than that, what three 'real bands' could play. Although that�s good for nothing :-) but normally played it (1040ST) sounded exceptionally. ATARI MIDI, what else?

Best Regards,

Daniel Mandic

>CT60.

Thanks for the reply.

I think there is a potential problem with Cubase Midi because it will not
run if there is more than 14meg (I think) of ST RAM available. On my
Hades it only runs if the memory is split so that any extra is TT ram -
which I think Cubase MIDI ignores. If I run in Single TOS, with the
memory suitably split, then Cubase runs excellently on the Hades.

I would like to find a 2nd-hand CT60 Falcon as an alternative machine, but
it is important to me to know if Cubase runs OK before I buy one.

If I can arrange for someone to test it for me I'll let you know the
results.

Paul

Hi DylanSOB

That's great - thanks for offering to do that. I look forward to the results :-))

Cheers

Paul

Hi Paul

No I haven't got your emails (yet), I got 2 other enquiries though which is encouraging. Wanadoo are sometimes a bit slow.

I'll check my webmail Junk folder incase they've deemed them to be spam.

Regards

Neil :-)

That's a shame. I sent them yesterday afternoon/early evening. I'd like
to be in touch with you about one of the machines. Any chance you could
e-mail a telephone number to: anna.wilNOSPAMliamson1@ntlworld.com   ?

If it gets through to me I'll try and give you a call. Meanwhile, I'll
keep hoping my ISP will get their Pop3 server working....

Took out the long dead battery today and no, radio shack doesn't have anything the same voltage. Closet batter is a 3.0 one. I was wondering if a pack of 2 or 4 AA or AAA batterys would work?

Hi all,

You could check a local Fry's electronics and pay about $16 US for these or....

Here is a link that I ordered some batteries from a while back.

http://sescodatasystems.com/product_372_detailed.html

Be advised, thanks to homeland security, all batteries must go ground.
Be prepared to wait up to a week for delivery.

I've also used 3 or 4 AA batteries with good results. I usually put 3 in series or if i have 4 put one in parallel with one of the 3. If you use rechargables, they will get you pretty close to 3.6 volts.

Even for those whose battery has not expired, you should replace them at least every couple years. I've had one explode in my TT and it make one H3LL of a mess. Luckily I was able to clean it up and the TT still works like a champ. The only damage was to the back metal plate which I neutralized the battery acid and wire brushed the metal. If possible, mount the battery outside the computer.

You will know when and if your battery explodes... It has an awful nasty smell like something is burning...

Rory

If anyone cares, all TT use the same timekeeping chip, and several
different OEM batteries.

The last time I looked up that chip, any voltage greater than 3 volts, and
less than 5.00 volts will work. The top limit is a function of the

circuit they are in. Over 5.125 volts may cause fatal damage.

So there are several differemt ways to power that chip. For mine, the batteries come from DigiKey, and arrive in three or four days.

Jim

I think so many people feel the same way but are afraid to say so (well
Steve DOES have a reputation for ripping peoples heads off and spitting
down their necks, well verbally that is).

You go girl :-)

Coda.

everything was said already. Only thing I can add is to mention nobody stops you to make new (CPU/GSXB/whatever)-based plugins since mxPlay is free software with open plugin format. So if you find it useful, go for it. If you aren't able to do them you have to find some programmer with the same point of view as yours since 99% people using real Atari hardware are happy to use DSP for music replay and CPU power for, let's say, FreeMiNT and GCC.

Hi mikro,

Best wishes for the new year :) Thanks for your work :)

You know that it doesn't bother me. I already have other modplayers that
do the job. The thing is for you. I just say that new players that don't
work both on clones and ARAnyM are very limited usage. It's a pity.

Best regards,

(newsgroups have been down here - been trying to post this for 3 says!)

First of all, Happy New Year everyone! :-)

We're trying to kick things off right at The DarkForce! BBS, so in the spirit of the season, we are continuing our tradition of monthly prize giveaways.

This month, January 2006, one lucky Atari caller will win a free subscription to ST Magazine. Also, since its almost NFL playoff time, this months featured game is AFL Football! The lucky winner of this game will receive a $25 cash prize. Slots are limited to the number of teams available so don't be left out. Also, rumor has it the Sysop is playing...who doesn't want to take a crack at bashing the Sysop? :-)

Good luck everyone! :-)

```

Hi Folks!
```

Following ST kit is up for grabs...

2x Atari STe (think one is 1Mb, other 4mb)
1x Atari STm (2.5mb RAM) Boxed
2x SM124 Monitors
1x SF354 Floppy Drive (No leads) Boxed
1x External Floppy Drive

All the kit is in good condition. The STm does have some slight yellowing of the plastics. Sorry, no mice are included

Open to offers on the lot. Buyer takes all and will need to collect from Lancashire (J27, M6)

Cheers,
Dave

Folks, the AFL tournament playoffs on the DarkForce! BBS begin in only 7
days...

Winner takes home $25...just like that.

When was the last time you got paid to have fun? :-)

Hi Rodolphe

On 3 Jan 2006 23:20:51 +, "Rodolphe Czuba" wrote:
>Sure it runs !
>
>I have at least 30 people who bought CT60 FOR CUBASE AUDIO !!
>
>So, if there would be a problem they would have told it to me, no ???

I am sure they would - but I am not talking about Cubase AUDIO.

Cubase AUDIO is NOT the same prg as Cubase MIDI. (Although Cubase Audio
has MIDI functions within it.)

Cubase MIDI is also known not to be "cleanly" programmed, and has some
known problems. For instance, when it runs on my Hades, it prevents
access to the SCSI port. It also has a problem if there is too much
ST ram available.

So, whilst I know Cubase AUDIO runs fine, I was looking for confirmation that Cubase MIDI also runs well. (I have been told that now.)

Cheers

Paul

Guys, is there any software out there that will step in, take any software
looking for serial port 1 and redirect it to another (faster) serial port?

Additionally stealth.net doesn't work for many us users. Try irc1.us.ircnet.net and us.ircnet.org. One of those always works from my locations. And #atariscne on ircnet is the only place to be ;) Please note the misspelling of "scene" is intentional (though I don't know how it originated!)

Thanks,
Mark

Hi,

does anyone know a recent laser printer that will work on the parallel
port of an ordinary ST?
A friend of mine bought one (a HP 3xxx) and is unable to make it work,
though there is no problem if hooked to a PC.

As he is living 400 miles from me, I'm unable to give him real help by
the phone.

Any information concerning the HP 3000 series or about any laser
printer that definitely works with ST is welcome. The capability to
print graphics is undispensable because of Signum!2.

Thanks

Und TTsch�

IRC just must hate me, is all I can figure out. I seem to have the worst
luck trying to connect. Mark, I used the 2 servers you listed above and
got this for both:

```
--- Looking up newserver..
--- Unknown host. Maybe you misspelled it?
 Cycling to next server in us.ircnet.org...
--- Disconnected ().
--- Looking up newserver..
--- Unknown host. Maybe you misspelled it?
 Cycling to next server in us.ircnet.org...

--- Looking up newserver..
--- Unknown host. Maybe you misspelled it?
 Cycling to next server in irc1.us.ircnet.org...
--- Disconnected ().
--- Looking up newserver..
--- Unknown host. Maybe you misspelled it?
```

Any ideas? Would love to join #atariscne again. Used to lurk there a lot
back in the late 90's. :-)

I think there was an app that could be used with freeze dried years ago
on the Falcon. BUT it could only work up to 19,200. I can't remember
what it was called tho. Alzheimer's?

You may be correct.

BTW, Is a Driver required for a Iomega jaz or Zip Drive when using it
on a Atari ST-Falcon?

Or do these work, as is with HD Driver, or ExtenDos?

If a Driver is required, Did these types of Drives come with
an Atari Driver? (Which I doubt) Or where does one get
the correct driver at?

I have seen posts in this group in the past about using the JAZ and ZIP
drives with Ataris.

Does HD Driver see these Devices as Hard Drives?

I have never used one of these drives before, I know that they are
re-moveable.
I have heard folks refer to Cartridges when talking about these drives.
What type of Media do these actually use?

I may want to get one or two of these, if I can do D2D with them.
So any details one could pass along about these drives, especially
what software is needed to use them. Would be a big help.

Thanks,
PHANTOMM

Greetings,

Have a few Questions about Cubase Audio Falcon.

A while back I acquired a Original Box Set of Cubase Audio for the
Falcon.
All disks and manuals are Original. I have the Original Dongle and 2 DSP
Clocks.

Here are the titles of the disks......
Each disk has the original label with picture or etc.

These are in a folder in one of the 3
Ring NoteBook Manuals.

Cubase Audio Falcon
Cubase Audio Falcon 2.02
Atari Falcon Audio 2.06 Update
Cubase Falcon Additional-1
Cubase Falcon Additional-2

The Following are not in any type of order

Cubase Cue Trax
Cubase Falcon Dig. Interface v. 1.00.00
Steinberg/Jones Additionals 3
Cubase Studio Module
Cubase Program Disk v. 2.01.00
Cubase Program Disk v. 2.03.00
Cubase Atari Falcon 2.04 Program Disk
Creative Input Cubase Utilities
Cubase Score2.0 Additional 2
Steinberg M.M.C. IBM/ATARI
Steinberg's Cubase Utilities for Atari
Steinberg/Jones D Maker
Steinberg/Jones Atari Drum Patterns
Steinberg/Jones Additionals 1
Steinberg/Jones Additionals 2
Steinberg/Jones Studio Module 1.04
Cubase Studio Module
Cubase Additional Disk v.2.01.00
Cubase Atari Falcon Additional Disk
Steinberg M.ROS
Cubase Score

I have two 3 ring Original Manuals with Cubase Info and manuals from the various disks above. Also a Paperback manual for Cubase Score.

I've used Cubase before, with a DSP Clock, but most all of the disks I got in this boxed set are new to me.
I've not had time to read up on the manuals, or check out the disks.

Questions......

Is Cubase Score and Cubase Audio Falcon two different programs?

What is the latest version of Cubase Audio Falcon and Cubase Score if its a different program?

Can one still get updates to Cubase Audio Falcon and related programs from Steinberg?

Can one still get Cubase related hardware for the Falcon from Steinberg?

Correct me if I am wrong, but I think there is 2 versions of Cubase, one for the Falcon and one
for the Atari ST/STE/Mega?

If so, would like to know the latest versions of both.

Are there any Web Sites devoted to Cubase?

Also looking to buy or trade for the following Falcon hardware:
JamPRO
JamIN
JamOUT
FAD (Falcon Audio Digital)
Falcon Analog 4 or 8
SRC Sampler
Falcon S/PDIF DAT Interface

Any help is appreciated, E-mail me if you happen to have one or more of the above items for sale
or trade.

phantomm@bellsouth.net

HSModem, fine for any serial port on falcon

Regards, Robert

Any HP that can be connected to the parallel port should work. According to HP's specification the LaserJet 3000 does not have a parallel I/O interface but only an USB interface. You can add a parellel HP EIO card and can then connect the printer to the Atari's parallel port.

Check out ebay for the FDI:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=7380339171&ssPageName=ADME:B:SS:US:1

2.06 is the last update for CAF from Steinberg and they no longer
support anything on the Atari Platform. It looks like you have
everything one would need for running Cubase on a Falcon. Score is Midi
only with no audio recording and I'm not sure if it will run on a
Falcon. CAF will only run on a Falcon.

Good Luck

For encoding, not playing. The old 56001 is faster than the 060 FPU.

Regards,

Didier.

Yeps. Encoding is different matter and raw cpu power does count a lot :) I also like the fact, that if DSP is busy playing. CPU is free for other tasks. MP2 for example, with great sound quality, takes less as 1% CPU on 030 Falcon. Ideal for multitasking.. And sound is not inferior to MP3, quite the opposite... MP3 is harder on CPU, since it can not be played in DSP only, but still it just pass on plain Falcon... ACE eats a lot of CPU even with DSP, so i doubt 060 would even be capable of playing all ACE tunes...

I would like to stress that using those player is NOT because we would hate Hades, but because those players can be used on plain Falcons, or CT2 machines... That is the only reason i used them. And if some Hades owner would write ACE or GT2, XM player that use 060 and Hades systems, believe me, i would be happy for Hades owners, i would not attack author where is Falcon/ST whatever version...

Janez

Hello,

For those interested in the Supercharger, I have updated my page:

http://perso.wanadoo.fr/gtello/supch_e.htm
(and in french http://perso.wanadoo.fr/gtello/supch_f.htm).

Happy new year!

Guillaume.

maybe some videomod.acc incompatibility with ct60?
try toggling fast ram flag bits as usual :)

SO its a cheap "would be" PC because it had a 68000 instead of an Intel CPU? Well friend, then throw that Amiga away as well because it also had a 68000 CPU! (and one that ran slower than the ST).

> The AMIGA always was a REAL computer.Powerful, great architecture,
> superb custom chips and a superior OS and GUI.

The Amiga was a pretty cool machine. I might have actually bought one when they came out, if I wouldn't have had to sold the farm, the house, the car, the wife and kids, and the dog just to meet that pricetag! I was able to buy my first ST, which did most of what the Amiga could (and some things it could not), for about a 1/3 or 1/4 of the price of an Amiga.

> So better throw away your ST fast, because STs are crap and should be
> dumped in the bin as fast as possible !!!

There seems to be a small group of people who want to throw STs in the
garbage bin...with a much larger group standing in line to retrive them.

  :-)

Why, exactly, would a company that specializes in vintage software need
to run a clearance sale? Are you trying to clear the shelves, waiting for
the new Atari models to arrive for '06? Are you trying to cash in on those
Jaguar games, before these newfangled Playstations get popular?

U must know that in GemPLAY i didn't develop new replay routes. GemPLAY code is only GEM shell, and wrappers arround existing replay routes, so AVSERVER etc can be used. I did choose fast routes, having majority in mind, Falcon 030 owners. Since many of replayers date from early days, they are Falcon only, since at that time that was most capable machine (AoN, GT2) so they use DSP. New ones as ACE, uses a lot of CPU and DSP, so i doubt it would play on 060 alone.

>It is not a problem of CPU power under ARAnyM :)

True. But it is problrm on Falcons, and i personaly care about Atari's more as about Aranym. People using Aranym can compile MikMod for example, it should work, but it is hopelessly slow on 030/060. I'we heard so much about Aranym superiority (not from you, i admit!) so im suprised Falcon 030 releases are commented: "Why there is no Aranym version". Maybe Aranym developers should consider DSP emulation, as we all know what "Aranym" acronime means... But to repeat, DSP is not used to filter Aranym users out, but to make stuff decent on Falcons (which are the in majority) with lack of CPU power..

> I hope it'll help.

Well it won't help much with this particular application, im affraid. I don't intend to make apps which deliberately don't work on Aranym or compatibles, just optimising is targeted toward Falcon or even ST...

Regards, Janez

I'm buying out an Atari Dealer. I have half of his ST Games/Software and I
need to make Room on my shelves. I'm also doing this to help fund a buyout
of the other half.

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/
Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at
http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received
Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify
Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

He's right. GEM was/is awful, after all why did things like NeoDesk(and

others)sell so well if GEM was so great? Of course, the M$(IIRC) developed
Amiga OS was no winner either... The Atari's were still nice/useful
machines though, and could emulate everything else usefully, along with a
decent pricetag plus 3rd pty. software support.

My list of '80's OS(small system) ratings:
1. UNIX & X (pricey, but what the hell... and only stable one...)
2. System 5/6 (only missing perfection by lack of preemptive multitasking)
3. GS/OS (hobbled by Apple purposefully)
4. GEM / Amiga OS(too fugly)
5. Windows
6. OS/9
7. MSDOS
8. other 8bit proprietary OSes(DOS, ProDOS, etc. and things like CP/M

(Looking at the list it's kind of funny how things went from those damn
stable little 8 bit proprietary OSes to the graphical card houses,
excepting UNIX... bombs(Atari & Mac), guru meditations(amiga),
BSOS(windows (or was it then? don't remember any more)), just dying(MSDOS))

By your own arguement the same can be applied to below - if they were so great, why were there popular replacements? Example, 4DOS for MS/DOS. If you're listing this as your opinion fine.

I for one would never have uses X in the 80's. Really, what popular software ran under it? Games? Just curious.

Unix and X didn't have any problems? Hmmm.... :-)

PS BTW, I don't think MS had anything to do with the Amiga (thank God!)- in fact, most of the team was ex Atarians, IIRC.

Hi all,

Do you remember that the Personal Information Technology
started 25 years ago with the ZX81 ? I was one of those :)
My first program wasn't "10 PRINT("HELLO WORLD")" but a
Breakout game in assembly language "10 REM 15BF65ED14CD".
What an interesting story ! I don't speak to born after
1971, indeed !

Greetings to Lord Sinclair !

Greetings,

I have been pondering over to get a CT63 or not.

I have 2 CT2B Falcons that work great and have no hardware/software compatibility problems with the stuff I use.

I also have several Falcons that are fairly stock including a SONO VISTA that I just acquired.

The speed of the CT2B is fast enough for what I do. And is very Compatible.

Although Rendering Images and 3D stuff would go faster with a CT63 if the software is compatible.

My questions goes to the owners of a working CT60/CT63.

I'd like to know how much software is compatible.

Generally, I use most of the major Graphics/Animation software,
D2D Recording software, DTP, and Net Software, SCAN X for
Color Flatbed Scanners and the ColorBurst HandScanner.
Cubase Audio Falcon, Emagics LOGIC Atari with UNITOR II and
LOG 3.

Apex Media, True Image/Paint, Rainbow Multimedia 2, all the Lexior Software,
such as Chronos 3D, Phoenix 2.0, and etc. Also VideoMaster Falcon cartridge and
software. Positive Image, are some that I use most and need to know if these work.
Also VIDI ST 12 and software.

Especially Apex Media, and VideoMaster Falcon software and Cartridge.
CUBASE Audio Falcon v.2.06 and EMAGICS Logic Atari with the cartridges
for SMPTE and extra MIDI support.

I am also interested to know if the extra memory can be used to record
Music and Sound to, with programs such as SAM, Cubase and others.

I'd like to hear from owners of a CT60/63 and the software that they use without
problems in accelerated mode.

Also any software that doesn't work or has some problems running in

accelerated
mode.

This will help me decide if a CT63 is right for me.

Thanks,
phantomm@bellsouth.net

Greetings,

Got a question about using SCSI Tape Drives on a fairly Stock
Falcon to do Direct to Tape recording.

Using HD Driver, will this work with most SCSI Tape Drives?

I have a HP Tape Drive, that has been used for storage on an
Atari.

Would it be reliable to record Music to it?

Thoughts?

It should work, but you need a SCSI tape (DAT?) driver. HDDRIVER provides the SCSI driver, but just like with CD-ROM drives you need a device-specific driver to make use of this interface.

I was told that it was used on a Atari system before.

Anyway, Does ExtenDos support SCSI Tape Drives?

I use it for CDROM/CDR drives. Never checked on Tape support.

I know that Syquest Drives and the like suppose to work.
I Remember someone posting about using Tape Drives on
the Falcon before.

If anyone is using a SCSI Tape Drive on a Falcon or other
Atari, Post what software you are using and the type of drive.

I think it will work. But I am not sure if the writing speed to
Tape would be Fast enough to do Direct to Tape Recording.

It would help if someone knows how fast a SCSI Device must be
to keep up with Direct to SCSI Device Recording.

Copying files over to tape wouldn't be a problem.

However, when Recording a Live Song or Track I'm not sure
if a Tape System would be as fast as a Hard Drive when
writing. A Buffer may help if it doesn't cause any loss of
sound quality.

I know the Falcons SCSI system isn't a speed Demon compared
to the latest Computers.

What I have is a HP SCSI Tape Drive. It's a 3.5 Drive IIRC.
It uses very small Tapes. Around the size of a small Match Box.

The Tapes are still being made AFAIK and I have alot of them
already. If I can't use it to do Direct to Tape recording, then
I'd at least like to use it to store completed Song Tracks.
Or for software backups and etc.

Info anyone?

Hi all,

I will gladly sell them to whomever would like them. I was think of
selling them as a set of 25 or by the pound(weight). I have tested
most of them to see if they boot. About 85 percent boot to the game
noted (in pen or pencil marked directly on the disk or some have
labels). A lot of them  are PAL games that seem to scroll the 1224 or
some are 50Hz (seem shifted to the left). Not sure how much in demand
those would be. It doesnt matter whether I ship them or somebody picks
them up, or I format them or leave them as is. I've assessed that I
just have too many 720k floppies for my own use, and would like to see
them used for those who need some or all of them!?!. LOL.

I dont want to toss these by any means. Buy some!!! If any game disk I
have that you buy wastes 5 minutes of your time, my job is done! ;)
Muhahahahahahahahahaha....

Thanks for letting me bend your ear.. Have a happy New Year!
Rory

As far as I know,with a CT 60 the fast Ram won't necessarily help with digital audio recording. Most of the audio programs are set up for ST Ram. I would say the exception is if you set up your fastram as a Ram disk, then I know that Zero X will record to the Ram disk as if it was an actual hard drive.Cubase audio won't do this its very restrictive as to the kind of HD it records to. I.E. Scsi! I don't know if other audio programs would do this. The problem is finding a Ram disk program that will take advantage of the "massive" amounts of memory available with a CT60.

The one program that is amazingly fast and really speeds up disk operations is True Disk which was a freeware program. It has been updated to take advantage of extra memory but that version is unavailable from the author. Too bad as I have 500 megs of memory!

I would venture to say that its probably not worth it to convert the CT2B Falcons to stock and then to CT60. How many Falcons do you have anyway???

I think most of the programs you have would be compatible with CT60 and you would probably notice a big speed increase. You would have to be careful as the bus speed is increased with a CT2b but the same bus increase requires some extra installation work with a CT60. This bus acceleration with a CT60 may cause some problems with Digital audio. And then there is the screen res. Without the videl acceleration you may not get the same screen res you can get with a CTB2. On the other hand, there are 2 models of video cards in the pipeline. check out Czuba's website for a list of compatible programs.Also the Dead Hackers site has an extensive bulletin board for CT60 users. I know Emagic

Logic (midi) works and its very fast. If I had a couple of stock
Falcons lying around I would definitely go for a CT63, especially if it
includes the clock module and a Rev 6 060, some of the bugs are worked
out and the firmware is all up to date.
Thats my 2 cents,
Mark

But not without a device-specific driver. Fact is that for each SCSI
device you need a specific driver in order to access it. You cannot
access a tape drive with a CD-ROM driver or a hard disk driver, *unless*
this device reports itself as a CD-ROM or hard disk device and
implements the same SCSI commands as these devices. But SCSI tape
devices do not do that because they are SCSI devices of their own, with
a special command set. This is why you need special drivers also under
Linux, for instance.
GEMAR by Steffen Engel ia a driver for SCSI tapes for the Atari. I think
it is shareware, you may find it on some ftp servers.

Note that a tape drive may rewind the tape while recording, which is bad
for direct audio recording.

Hi,

My ST/e is packed up and ready to be collected by its new owner.

I wrote my own backup/restore software to access a QIC-150 SCSI tape drive. It works quite well, though it's perhaps a little under-documented. If you have the capability of compiling the source without asking me *too* many questions, then you're welcome to the source.

Steve.

AtarICQ 0.166 released

The holidays are coming at an end, and just in time for the new year we now bring you a new version of AtarICQ! Lots of things have changed, and even though most of them have been invisible there will also be more appearant changes for you to explore.

For those of you who have upgraded to a recent version of XaAES, you will now find that aICQ supports its excellent keyboard navigation scheme. That is, via TAB and ARROW keys you will be able to navigate through the GEM dialogs of all programs that handles this properly.

Secondly, we are excited to present the first implementation of support for the AOL instant messenger protocol in AtarICQ. The support is still being worked on, but we consider things to already be working well enough to be highly useable.

Here is a screenshot that gives you an idea what it feels like to mix ICQ and AIM contacts:
http://www.ataricq.org/ataricq/20051206_AtarICQ-2.png

Add to this a substantial list of bugfixes and other improvements, and you find yourself with well enough
reasons to upgrade :)

Read more and download the new release on the AtarICQ webpage.

http://www.ataricq.org/

Happy new year!

Regards,

/Joakim

Hi,

British peoples told me that Sir Sinclair wasn't a Lord
but a Knight. I apologize for that mistake !

I wish you a happy new year :)

In the final hours of 2005, there is now a new development snapshot of XaAES available!

The most interesting changes this time is the new keyboard navigation scheme, and the improved support for wdialog functions.

Keyboad navigation has been something we take for granted on other platforms, and the implementation in XaAES is similiar although not identical. It even allows for navigating the GEM menu bar via the keyboard! ("Open" menubar with CTRL+ALT+SPACE, and use ARROW-keys and RETURN to walk/select). For normal dialogs, you can either walk according to object order with TAB, or use the ARROW-keys to move focus UP/DOWN/LEFT/RIGHT. SPACE will select the focused object whereas RETURN will select the object that has the default bit set.

The new XaAES binary now has support for the wdialog pdlg_xx(). This seems to make a few picky programs that uses the printing setup in wdialog now finally useable under XaAES!

Last and perhaps least, you will also find that the unofficial XaAES page has had a visual update. Hopefully it will now be nicer to look at and also easier to maintain due to some basic useage of PHP.

Read more here: http://xaaes.atariforge.net

Happy new year!

Regards,

/Joakim

Thank you ver much.

XaAES is a must be for every one. IMHO, it's a mature OS now.
I haven't uses N_AES since more then a year now and I still haven't
regret that.

Jeesh, you yanks are slow. It is just about dinner time on the 1st of January 2006 for us blokes, in Aussie;-) Time to crack a tinny and throw another prawn (not shrimp) on the Barbie. It was 45 degrees Celsius yesterday, and about 35 degrees for the 3 days preceding. A nice 30 degrees ATM. Ripper.

Happy new year mate

Mark

Thanks Lonny. What are some good Atari chat rooms I can go to. The ones I have gone to in the past usually have no one else in them.

Thanks a lot for the support. The end of 2005 was a good one for some real good Atari programs with some real good upgrades.

Hi All

After many years of being an Atarian I shall have to sell my entire Atari collection due to lack of space! :-(

An advert may appear on eBay if I can figure out how to do it and get pics of everything.

Here goes:

Hardware
****
Atari Falcon CT60 housed in a modified 19" rack (Spacecase), this was assembled by Lyndon Amsdon complete with an internal Eiffel PS2 adaptor. I have fitted a CT60 on/off switch and a 3.5" Maxtor 40Gb IDE HD.
14Mb ST RAM, 256Mb FAST RAM (Crucial module).
Sensible Offers in UKP.

Atari Falcon CT2B housed in a C-Lab MkX case, CT2B fitted by Shiuming Lai whilst he was at System Solutions. Complete with an external Eiffel PS2 adaptor. CT2B on/off switch. Fitted with a 20Gb 3.5" Seagate IDE HD.
14Mb ST RAM, 64Mb FAST RAM.
Sensible Offers in UKP.

iiyama Vision Master Pro400 17inch CRT VDU, VGA multisync monitor with excellent display quality. Used with CT2B machine daily at 800x600 in 256 colours.
100UKP ono

Microvitec 1438 14inch Autosync CRT VDU, VGA/RGB monitor if used with a suitable ST/Falcon switchbox. Falcon switch lead can be supplied. Upto 100Hz refresh, but can easily handle ST LOW as well!
50UKP ono

Epson GT9500 A4 scanner SCSI & Parallel interfaces, GT Look software for Atari supplied. 40UKP ono

Epson Stylus Color 600 inkjet printer Parallel/Mac, works a treat with NVDI on Atari. 50UKP ono

External 56K K-flex Modem, used daily with CT2B. 25UKP ono

Adtron Accent SCSI PCMIA external card reader, can read Compact Flash cards with an adaptor, others supported.
150UKP ono

Yamaha SCSI CDRW 16x10x40 housed in external SCSI case. 60UKP ono

Mega STE external keyboard. 60UKP ono

ASP/ Mario Becroft Mouseburster PC serial mouse adaptor with hi-res mouse.
20UKP ono

ASP SCSI Burster lead for adapting a suitable case to be a SCSI cluster, 3 way version. 10UKP

Atari Jagpad. Offers

2 micro switched joysticks, 1 is a Zipstick and other is Cheetah Mach1(?).
Offers

Drives - any offers accepted:
36x SCSI CDROM drive.
Syquest 135 SCSI drive bare, 2 carts supplied.
?384Mb HP SCSI HD has a cache.
2.1Gb Maxtor IDE 3.5" HD (was used in CT2B).
730Mb IBM IDE 2.5"HD supplied with Falcon fitments (was used in CT60).

Software
****
Just a list, maybe included with a machine package:

Atari Works, Diamond Back3, Diamond Edge 2.5(updated ver), Kobold 2.5 & 3.5, Pure Pascal, Texel, Emailer, Magic 6.20, CAB 2.8, NVDI, jinnee, CD Writer Suite, Extendos Gold.

Mega Lo Mania (ST/Falc), Running (Falc), Substation (STE/Falc), Obsession (STE/Falc), Desktop Solitaire.

Some shareware registered titles.

Atari Computing issues 1 to 16 inc CD and some subscriber disks. Offers.

Thanks

Neil :-)

Mmmm, sounds interesting that philosophy.

Any takers for a completely original IBM PC+Cassette Interface, LIM board,

10Mb Hard Card, WD EGA graphics adapter, IBM EGA monitor, external IBM
expansion bus 3.5" 720K FDD.

Yours for �10,000, �3000 off original list price, IBM PC was �7,000 alone in
1982. I've been saving it for years and years waiting for the price to go
back up.

Hi Ron <waves> :-)

Hi All,

Does anyone know if Cubase (midi not audio) runs on a CT60 Falcon ?

TIA

Paul

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

graph-tools

ftp://chapelie.rma.ac.be/atari/graph-tools/zview/zview-b7a.zip
(2.495.267 bytes) zView is a plugin-based image browser, converter and viewer and PDF reader for Atari TOS and compatible systems.

internet

ftp://chapelie.rma.ac.be/atari/internet/aicq/aicq0166.zip
   (141.475 bytes) Very nice GEM-based ICQ client with basic support for
   AOL instant messenger or clients that are compatible to it.

ftp://chapelie.rma.ac.be/atari/internet/atarirc-204.zip
   (213.843 bytes) Nice and powerful GEM-Based IRC clients for STiK/STing/
Gluestik.

ftp://chapelie.rma.ac.be/atari/internet/mymail-186.zip
   (1.335.514 bytes) Nice mail client for Stik/STing/Gluestik/MagicNet.

Have fun,
Martin

Yes, sure, CT63 includes the CTCM and the 060 Rev.6 at 95 MHz minimum.

But only 9 cards still available (not reserved).
The boards are actually assembled in the factory...

I do not think I will produce a new run after...

Maybe the last chance to get one..

This afternoon a french guys came to see me at my house with a falcon mb to
repair and he had alrerady (8 months ago !) reserved one CT63.
He paid me cash for 2 others CT63 because he has 4 falcon at home !

About software, I can say that the CT60/63 is at least equal to or maybe
more compatible than CT2, because of some bad design on CT2 (like TT-RAM not
at the $01000000 adress (need to use the PMMU and it is not 'transparent'
with some programs) and the DSP IRQ that is not connected...)

There is a list of tested sofware and games on my web site !

About TT-RAM (SDRAM), Cubase use it a bit !! In fact You cannot flag Prog
RAM in the FILE INFO CPX because it will not run correctly (no crash)
because the AUDIO SDMA BUFFER is chained to the CODE of the software---> if
you let the cubase audio to load into SDRAM, the buffer is into SDRAM and
SDMA chip is not able (like blitter) to reach the SDRAM to rtransfer audio
or read audio...the result is that cubase audio run VERY FAST, but you hear
nothing on the AUDIO curcuit !
BUT you can flag the other part of TT-RAM : the DATA MEMORY...and Cubase

uses it ...and you run really faster on some operations.
Note that this flag configuration was/is the same possible with CT2...

Regards

Hi there

No they haven't thrown in anything. The forum is down at the moment as its being constantly spammed, Magazine production is slow due to lack of human resources.

Hello, i cant get Autosort.prg v4.1 to work with MagiC OS running Jinee as
desktop on my TT. It says "Not enough memory" errorcode #-39

Why? I have 13,7Mb RAM free !!
It doesnt even work in singletasking mode.

any suggestions?

If you're looking for a German ATARI group, try fido.ger.atari. Google Groups does still support this one.

  Hey George

  We repeated  that numerous times. I guess Atari Scene is not the right
chanel for some... ;)

go to atari legend ftp and check into the gfa programming area...

HA!!  if your capible of translation  , the task at hand would be correcting
a few mistakes which appear in the files!!!

well ok,
charles

oh ..if you have the time let me know of any good discoveries.

Bonsoir :)

New version of my Dungeon Master clone, download on my
website or directly in the folder http://rajah.atari.org/files/
-> dgem020.zip (1.7 MB, dezipped: 7 MB)

New in this 0.20 Xmas2K5 version
- all the monsters
- hand to hand fighting

Carefull, since this version, the program needs more memory.
8 Mo under 16 colors mode, 14 Mo under 256 colors mode.
Under 16 colors mode, some monsters appear with false colors

Minimum requirements :
STeem/Nostalgia/Hatari: TOS 2.06, VDI extended mode, 14 Mo
Falcon/TT/clones: TOS 4.04 (MagiC advised), 256 colors, 14 Mo

In this dungeon, the monsters have 1 health point.
A zoo is present at level -7, via the teleporter.
If you want to modify this or create a new dungeon, use
the Deditor. The current password for this example dungeon
is 'eil3'.

Coming next : throwing objects, casting spells, atmospheric effects,
throwing thing generators on wall... There will be not 0.22 version,
but 1.0.

Hope you'll enjoy. Merry Xmas, and Stay Atari :)

Sam, just about anyplace like Bravo Sierra, B&C Computervision, etc, etc,
has it...(Chaos Strikes Back too).

Heckuva game, one of my all time favs, on any platform. :-)

Merry Christmas!

Hi Sam!

I am sure you can find a Homepage related to DM and Chaos Strikes Back.
There should be all versions (AMIGA, ST, etc) for DL.

Best Regards,

Daniel Mandic

Merry Christmas to you all,

There's two updates related to ARAnyM :)

<http://eureka.atari.org/MacAranym.zip> is a binary snapshot 0.9.2pre1 of ARAnyM for MacOSX. It was built with Xcode 1.5 under OSX.3.9. This package contains a boot disk image that is suitable for latest improvements of ARAnyM, similar to AFROS (ATARI Free OS). Ready to use.

<http://eureka.atari.org/xa-my-aes.zip> is a boot disk image that is suitable for ARAnyM 0.9.0 (all host platforms). It may be better to use a stable version (0.9.0) specially for devel purposes. This disk image was updated with a December 23th snapshot of freeMiNT, and follows all other developments such as zView beta 7 etc.

It's up to you !

See you soon for updated news of the ATARI front ...

Maybe you don not know but there is a new version of Dungean Master,
reprogrammed by a guy with GEM interface !
It runs fine... even if all stuffs are not yet implemented, there are one or several levels now...

Do not ask me where to find it...ask on french ng...or check on atari.org...

Regards and happy....

Thank you very much for answer.

But I really have Atari 1040 STe, its with AZERTY keyboard and french
GEM :)

But on the back there are only...
left to write:
modem port,
printer port,
hard disk port,
floppy disk interface,
then monitor interface, and then two audio jacks with letters "R" and
"L", and there are power switcher above.

Then there are power socket and reset button.
Also I have two midi sockets on the left side of Atari, one unknown
interface, two joystick ports, b and a... I also have another two
joystick ports , but can' find "phono" :)
I can take a picture and post it... Is it possible that french Atari
STe have no rf port?

>> Or may be RF antenna cable should be connected to the same place, where
>> Atari monitor?
>No, but you can get composite out.

Wow!
I haven't read about it, I have read in newsgroups how to connnect
monitor socket to scart, but not to composite.
Please, give me a link if possible.

Anyway, I'll connect Atari to my LCD screen thourgh tv tuner or video
capture board, which both have composite in

Thanks

Yes, and a JAVA one on Windows etc...

Nothing is like the original, Best on AMIGA, ST and PC for the last
(Poor Sound)

Best Regards,

Daniel Mandic

P.S.: Of course, played on the right stuff. Or at least under DOS with
a ISA-Soundcard (FM-Sound does have its place in my heart, not better
but other!)

Hello all,

A Christmas release of GEM Instant Messenger has arrived. GEM Instant Messenger is an AOL instant messenger compatible IM client for Atari systems running MiNT. This version has fixes of iconification, font selection issues fixed, it's built with Windom 2.0, buddylist size/position is saved in the configuration file, debug text has been isolated and removed, bug causing buddylist to redraw over everything fixed, and restructuring and beautification of all dialogs.

Now I'll be working on the Sparemint Update Manager to get a usable release now that I finally got my new server up and running. It shouldn't be long at all. Also the site is almost ready to go again :)

Once that is done, I plan to rebuild gim mostly from scratch using the current version of libfaim. In this version, now that I have much more GEM experience, I will make sure everything is *very* pluggable so that protocol plugins can be used, and the new version of libfaim has many nifty features like server side buddylists and more!

Have a merry XMAS and happy to holidays to people who swing the other ways :)

Thanks,
Mark

Hi Oliver

For serious money you can have this nice warm cosy PAK�d MegaSTE.

 *  MegaSTE 40Mhz 68030, 68882 FPU, 4+16 Meg RAM, SCSI II, MV-300 graphics
card  *

Umm, why don't you ever quote a price when you mention this system?

I mean, I've seen you say you'd let it go for "serious" money several
times but never an actual figure.

Just curious.

I have seen it listed for most Atari dealers in the UK and Germany. In the US
trace B&C or maybe Bravo Sierra.

Thanks a heap for this. Plays great on the Hades, but I get no sound as yet. I do not have the appropiate sounds card yet. It there anyway the sound can be generated through the ST-Soundchip as in the ST version. I have that chip in my Hades which, for now, is the only way I get sound?

>Carefull, since this version, the program needs more memory.

No problem here. I have 256-meg

That is one thing I have always liked about the ST. You do not have to worry
about it or remember to hold down certain buttons to get the disk to boot. I
wish my Hades was like that.

>
>Thank you very much for help.

The monitor has this border normally. YOu can make it smaller and increase your viewing size by going in and doing some electrical adjustments. There is an article about this on the Net. I would just buy the variou SVGA adapters that exist for the ST. This will allow you to hook up a PC-type VGA monitor, but will only give you mono. The screen size is MUCH larger. That is what I did and it works fine.

Because you know as well as i do that this thread will then get swamped with
meaningless bollox that will make people whinge.

Its your for �1000

(now you'll see why)

--

Regards from STEve & his nice warm cosy PAK�d MegaSTE.

Hi,

A binary compatible with MagiC is now provided :)

Nothing change for the TOS/MiNT users.

Merry Christmas !

ciao,
zorro

Its possible as French TV has some "odd" standards. Indeed when I looked I found this:-

http://mpc.fab.free.fr/atari/atari16-32/pstf.htm

Which shows a French STE with no RF output port, so perhaps the french STE did not have this port.

> >> Or may be RF antenna cable should be connected to the same place, where

I wonder if the french STE is also lacking composite. Normally only machines with Modulators had composite.
In any case I wouldn't use it except for the odd game, its really poor quality. I found pin-outs at :-

http://pinouts.ru/data/AtariStMonitor_pinout.shtml

English ones are like this:-

http://www.myoldcomputers.com/museum/comp/1040st.htm

which is an STE as it has the extra joystick ports and the stereo phonos...
You can see the TV Out between the Floppy and Monitor ports.

Hi Ronald

Your right, the PAK cost �850, the FRAK and memory �400, the MV300 was �350
and the FPU another �150, SCSI board was �75, Hard Drive was �175, well
expensive aint it?? The software it contains is worth near to �500 alone!

>>> Umm, why don't you ever quote a price when you mention this system?
>>>
>>> I mean, I've seen you say you'd let it go for "serious" money several
>>> times but never an actual figure.
>>
>> Because you know as well as i do that this thread will then get swamped
>> with
>> meaningless bollox that will make people whinge.
>>
>> Its your for �1000
>>
>> (now you'll see why)
>
> Yes, I see why you've still got it and are still trying to sell it for
> "serious" money. <grin>

--

      Regards from STEve & his nice warm cosy PAK�d MegaSTE.

 *  MegaSTE 40Mhz 68030, 68882 FPU, 4+16 Meg RAM, SCSI II, MV-300  *

Hi devs,

I just downloaded two ModPlayers :

GemPLAY 0.97 [25.12.05 23:58]
Link: gemplay097.lzh Yescrew

mxPlay 1.00 - best module player for your Atari Falcon [24.12.05 23:58]
Link: mxplay.sourceforge.net mxplay.atari.sk mxplay.lzh

from http://atari.sk/

and I tested these with ARAnyM. The problem is that these
players are performing a detection of the Falcon hardware.

But do you know that GSXB is implemented, and that the
DMA sound system and DMA system calls are present, though
there's no Falcon hardware.

Instead of detecting the Falcon hardware, you should better
detect GSXB, and use DMA calls as usual. That's so simple !

GSXB is at : http://assemsoft.atari.org/gsxb/

I'm telling that about ARAnyM, but it is the same problem
on my Hades 60.

You should think about it :)

Best regards,

I did, but unless u have DSP working in Hades (MOD, ACE, GT2, AoN all use DSP replayers in GemPLAY, to minimise CPU usage) GSXB will not help u much. Reason for DSP is clear: no way to replay ACE, MP2/3, GT2, AON on less as 060 CPU and even on 060 u may have probs, not to mention that leftover CPU power will be weak. For example: MP3 takes let say 80% CPU power on 060, so its not exactly usable as background player... Falcamp use maybe 5%, Aniplayer with DSP 10% or so...

Personaly i prefer using fast DSP replayers, so owners of "plain", "slow" Falcons can enjoy music and still have most of the CPU free for other tasks. Falcon 030 owners must NOT be bannes, just we have faster machines, esp since 030 Falcons are capable to replay all those formats... I also made separate players in ACC versions, so TOS users may enjoy music while doing other stuff.

Janez

Well ... "virtualize" has a bad consonance for a machine. Would you
prefer that it "runs it independently from OS and Hardware" ? That is
a strong assumption !

> Problem is: Aranym dudes and
> fans goes berserk if we call Aranym emulator or when we say its not an
> Atari.

ARAnyM is a unique experience. Because the bytecode of the virtual
machine is inherited from 68k processors family ... You should feel
comfortable with it ;)

> Noone say Aranym is crap, we know what it is and what it can do, how
> fast is, etc. We also know that Apex Media snapshoots are fake, since i=
f
> program does start, but then crap on 90% of options and things it SHOUL=
D do
> is misleading.

It's not fake, because Petr has a 040 version of Apex directly from
Douglas Little :) That's what I understood ;)

> But okay, we cant deny it starts! Still Aranym comunity
> will not stop until we will say that TT ot Falcon are crap and not Atar=
is

Well ... Why do you want to oppose the communities of developers ?
We're all going the same direction indeed !

And it compiles bytecode "on the fly" with a 'Just In Time' compiler.
That's why it is not called an "Emulator". No other systems do it
the same way.

> Now where "It is an Atari machine" comes from? What can for
> example GEMDOS $39 (makedir) do on Aranym without Windows, MacOS or Li=
nux?

> Absolutley nothing.

It's an ATARI machine that runs independently from OS (also Solaris,
BSD etc.) and hardware (x86, PPC, SPARC etc.).

You should think about it :)

Best regards,

Very possible, as French TVs use SECAM, not PAL, and perhaps Atari
wouldn't find it worth while to produce a modulator for this
restricted market...

Hi all,

I have amassed an unwieldly amount of 3.5" 720k non-original game,menu and game demo disks. I have tested quite a few and most work fairly well. Some need a 50/60hz program, but most boot to the game start.

My dilemma, how can I get rid of these, and make a few bucks, make a few people happy. Should I format them and sell them as blanks or leave em as is? I would sell them in lots of 50 or 100, couple extra for possible bad disks? $4 + cost of shipping? Dunno.

Or should I just put them in the dumpster?
I couldnt possibly make a list of all the games. There are just too many and I'm really short on time anyways. Any ideas?

Thanks
Rory

You can use the Floating Point Unit for the same usage, can't you ?
In combination with the usage of the DMA sound system (and GSXB) ...

Aniplayer alternatively make usage of FPU, that is justified.

>   Personaly i prefer using fast DSP replayers, so owners of "plain", "s=
low"
> Falcons can enjoy music and still have most of the CPU free for other

It is not a problem of CPU power under ARAnyM :)

> Falcon 030 owners must NOT be bannes, just we have faster machines,
> esp since 030 Falcons are capable to replay all those formats...

How many working Hades 60 is there around the world ? I wouldn't
be surprised if it could be counted with fingers of two hands ;)

> I also
> made separate players in ACC versions, so TOS users may enjoy music whi=
le
> doing other stuff.

You're doing a brilliant work :) The problem is that with my machines I can't benefit from it. DBEplay works on my Hades 60, and Tetrax under ARAnyM. But I've no idea of the quality of your player since it detects hardware that don't exist on my machines.

I hope it'll help.

Best regards,

Hi All

Thought I'd use the Xmas holidays to get the CT60 Falcon working, after changing the HD to a 3.5 Maxtor 40Gb one night very successfully I thought that the flaky days of programs not running/disappearing were over! I hope they are not back again....

I am currently setting up the computer in Falcon mode (eg CT60 mode switched Off). I backed up my files from my CT2b's boot drive so that I could going faster than installing each application. This also means I have an adjusted MAGIC.RAM file for CT60 mode. TOS mode seems to be working correctly so I tried a Magic boot, second time it got through to the jinnee desktop OK. I tried to adjust the Video mode with VIDEOMOD.ACC (as supplied with

Centscreen 3, this displayed the usual settings box but then as soon as I selected anything the box disappeared and also disappeared from the ACC menu at the top of the screen! Loading it in by double clicking on the ACC file didn't resolve the fact that it had stopped working.

I remember I had this problem before with the old 2.5" drive installed except that Magic packed up and refused to work after some days. Even re-installing failed to get it working.

Is it a hardware or a software problem?

The micro ATX PSU is sat right above the CT60 board, I wondered if there was interferrence or heat problems.

Any suggestions would be helpful.

Neil :-(

Rory,

I also have a lot of game demo disks and all I can say is that I would never
get rid of them. Just list what is on them and offer them for sale. Most of
the demos offer a big part of the game and should spark everyone's interest.

So that is why I was having some trouble in getting it to work. Thanks a lot.
I appreciate it.

I'm happy to announce at this time that The DarkForce! BBS is resuming its time honored tradition of monthly $cash and prize giveaways! Starting Jan. the 1st, 2006, we will have a $25.00 prize going to the winner of one select game, as well as one lucky Atarian winning a free subscription to ST Magazine.

Thanks! :-)

i have a sure fire solution keep them for two months ,during this time embark on an auction..spreading the word around"...... box full of 3 1/2 floppies for sale to highest bidder!!!!!"

and of course after two months present item to highest bidder.

heck i'd bid 10 dollars if shipping was included!

charles.copp@sympatico.ca

Incidentally,

It might be worth mentioning that GIM implicitly supports ICQ but in a
limited fashion. If you sign on to an ICQ account with GIM you can send
and receive messages from both AIM and ICQ users. If you sign onto GIM
with an AIM account, you cannot send/receive messages from ICQ users, but
only AIM users. So users of aICQ can feel free to give GIM a try as well.
The buddy list is ugly though, fair warning ;)

Thanks,
Mark

lp,

This is probably the one of very few things that you and I disagree on, nonetheless... ;) IMHO Aranym is an Atari machine. Many people left on Atari are doing live development on Aranym. While it has limitations like need to test on real hardware, etc, it's very useful to create another machine with the power of the CT60 on the cheap. It's also good in cases where we don't have a good video card for the falcon/ct60 *still*. You can say, oh it's just emulation, but in my opinion, it stands out as a virtual machine. The difference being that host hardware is used for audio, instructions being translated with JIT, native partition files able to be used, native host ethernet, native host filesystems, etc. Because of the layout and design, the host machine is an extension of the atari system, therefore it's much more than just an emulator (which is quite the self-contained beast). To users who want to work on freemint, etc, or develop Atari software but don't want to sink any cash into building up a falcon for themselves, aranym is a path and a surprisingly good one at that.

The only real complaint is that some major aranym devs have in the past touted aranym as the way of the platform. I call BS on that. It's just a very very superb tool. I think they have since retracted those statements too, but can't be sure either way. And anyway, that confidence is a good thing ;)

Thanks,
Mark

Is there anyone who can help me update my
version of Papyrus to the latest version, or near
to the latest version?

I have a complete original with disks and manuals.
Up to around version 5.

Will any of the update disks work with my version?

If so, I would be interested in buying them from you.
And the manual updates if you will sell those.

Contact me if interested,
phantomm@bellsouth.net

This is a very sensible answer :)

> They've implemented some really neat ways of using native
> (non-emulated) hardware from the host platform too.. Naturally, it's
> not compatible with hardware banging stuff, but on the other hand, a

We won't stay here, crossed harms waiting for the new hardware to come.

The way ARAnyM started was to ask ATARI peoples what type of new machine they were dreaming about. Peoples were all dreaming of a brand new PeCes, with all modern peripherals. I had a Hades 60 at this period, and I answered asking me what could be improved on my machine ... All was almost there on the Hades.

Then, why not to implement a virtual machine on every kind of OSes and hardware, that would be independent from the host platform ? This was the answer. Because I first helped for emulators like STonX and TOSBox, I guessed it was a really good idea ... I had no conscience of what was a virtual machine, but I thought at that time "whaaa, I've never seen such a powerful emulator !". It was then adapted to Cygwin and OSX, and I really began to realize what was the power of a virtual machine.

Now peoples can think it is not enough reliable, unstable or bugged etc. If you followed the project from the beginning, you would see what piece of work has been done on it :) And it is GNU GPL, with no facilities of big majors like SUN or Microsoft that already have their VM ;)

I wouldn't tell it's the ultimate solution ... Other software or hardware projects are going on at the same time. But it is the project that gave quicker results, with a lot of consequences in the ATARI world.

So, enjoy it, and make it leave :)

Regards,

Virtual machine is NOT an emualtor as long it "virtualise" a non existant machine, as soon as virtual machine "virtualise" existing machine it emulate that one, so how we should call it? Problem is: Aranym dudes and fans goes berserk if we call Aranym emulator or when we say its not an Atari. Noone say Aranym is crap, we know what it is and what it can do, how fast is, etc. We also know that Apex Media snapshoots are fake, since if program does start, but then crap on 90% of options and things it SHOULD do is misleading.. But okay, we cant deny it starts! Still Aranym comunity will not stop until we will say that TT ot Falcon are crap and not Ataris since Aranym IS real Atari..

Aranym use native host hardware, instructions are translated (eg emulated, simulated, virtualised all u want just not EXECUTED), hardware is either host hardware OR simulated, translated, emulated, virtualised, whatewer (VIDEL for example) and also depends heavily on underlying OS, so "ATARI" OS calls are again translated, virtualised, simulated, emulated on oh so many layers.. Now where "It is an Atari machine" comes from? What can for example GEMDOS $39 (makedir) do on Aranym without Windows, MacOS or Linux? Absolutley nothing.

Janez

Hello,
Currently, I translate GT-LOOK into French. I read on an old message
which one could have the modules on the site of www. milanstation.de,
but I did not find anything� GT-Look is freeware, for the modules, I
don�t know. I wrote several months ago with the authors without having
answer.
Regards
Florent

Hi Glenn!

I would like to get to the roots you were asking for. ARAnyM uses the host OS to access the HDD. So you are able to read whatever Atari formatted HDD you have the bus for on your PC and your host OS (Linux, or Windows) is able to see as a device. There is no need for the host OS to understand the filesystem on the Atari disk though when you use ARAnyM.

You can also create a complete HDD image (all partitions including the partition table) and access that image with ARAnyM on your PC. This approach is recommended to not to mess the real HDD data accidentally in case something is wrong with ARAnyM itself.

I hope this helps.

STanda

Glenn wrote:
> Was wondering how ARAnyM stacks up against MagicMac/PC? Mainly in the area of ability to connect Atari ST/TT/Falcon hard drives (e.g. Syquests, etc) through a SCSI connection and be able to read the AHDI partitions and extract files.

I found an article in the online archive of the German "ST Computer"
magazine (issue 4/96), claiming:

"Der Einbau der Hardware ersch�pft sich im Einsetzen der Treiberplatine
auf oder unter die CPU bzw. Beschleunigerkarte."

Roughly translated: "Adding the [Panther] hardware doesn't exceed
inserting the driver board onto or under the CPU, or speeder board
respectively."

On wrsonline.de, though, are JEDEC files for both the Panther 1 and 2
GALs and an additional instruction to wire pin C1 to C8 on the Panther 1
to make them work: <http://www.wrsonline.de/gals.html>.

HTH,

Thorsten

> Still Aranym comunity
> will not stop until we will say that TT ot Falcon are crap and not Ataris
> since Aranym IS real Atari..

Aranym community... Atari community... How are they separate?

I don't get it. Why does everything has to be black & white on this particular issue? I normally use "real" atari machines; a CT2 and a CT60. They are not crap. A stock falcon is not crap either. I like atari machines. But that's not the issue.

My point is, that if properly configured, this is a good alternative if you *haven't* got a CT60/Hades060. My point is *not* that Aranym should be better than "real" machines, it just happens to be fast and cheap and well implemented (despite some bugs).

In theory, it could be possible to kick the host OS and make the whole shebang run natively (with a lot of work, naturally), but then again, how would we benefit from that? No up to date drivers, inventing the wheel over again, no portability, and it would not increase stability notably either.

LP quoted an on-line dictionary:

>Main Entry: em=B7u=B7la=B7tor
>Pronunciation: 'em-y&-"lA-t&r
>Function: noun
>1 : one that emulates
>2 : hardware or software that permits programs written for one computer to
>be run on another usually newer computer

I don't think I've said that it's not an emulator, only that it's "more like a virtual machine" (or something like that). It is quite possible to compile and run stuff under Aranym which could never run on a "real" machine. In that case, we are not *only* talking about emulation, because in that case, it "emulates" stuff that doesn't exist in the "real" world. It does however emulate parts of the hardware as necessary. I don't think I've said otherwise.

"Virtual machine" is not a sweet word for "emulator". Some people here seems to think this is a way of saying it doesn't emulate anything. That's not the idea.

Wonderful. That was the answer I was looking for.

And thanks again for all those who replied and helped.

I strongly suspect this has all to do with how much buffer there is on the UART. Asking the processor to respond too often to interrupts will lead to the unreliability described earlier. However, if the CPU is requested for moving not several bytes but many more, there should be no problem. A workaround would be to design a cartridge providing a new serial interface, with UART endowed with a much larger buffer. The usefulness of this in this day and age remains to be seen though.

I recently found some old disks with lots of documents I wrote in the 80's, all of them in 1ST Word Plus format. I'd like to convert them to a current format like RTF or HTML, even plain text is OK. The obvious solution is to use 1ST Word Plus and export to plain text, but 1ST Word Plus doesn't work on my Milan. Are there any utilities that can do this? Or perhaps another editor/word processor that reads these files?

Message to Uwe

I had a problem with my TT getting stuck on booting, so to make a long
story shorter, I ran the Write test part of Discus, and it found a bunch
of bad sectors. This is a very old drive. Then I ran HDD sector test, it
found no bad sectors, but showed a number of sectors that looked a little
strange for a 4 gig drive, and after that it did not get stuck in the
middle of a boot process.

What did I do?
```

Hallo Jo Even!

JES>but 1ST Word Plus doesn't work on my Milan.

It definetely does on mine. German version 3.20TT of 1990.

IIRC there's also some converter program, 1WP2RTF or the like.

Signum!4 should also be able to read 1ST Word Plus documents. But that one is
not always willing to run on my Milan :-(

With best regards
Ekkehard

It crashes on my Milan if I try to import a 1ST Word Plus document. I have
Papyrus 7.5, perhaps I need a newer version?

What do you mean by "looked a little strange"?
As far as the sector tests of DISKUS and HDDRUTIL are concerned the
algorithms are different. HDDRIVER makes a a read test only, whereas
DISKUS, depending on the settings, also makes a write test. The results
if these different test approaches can differ.
In general SCSI drives are supposed to replace bad sectors by other,
reserved sectors as soon as the drive encounters an error.

Are You shure, that the file is OK? With 1ST Wordplus documents in papyrus
I had never any problems.

> I have Papyrus 7.5, perhaps I need a newer version?

Try the latest demo version (10.2X) from the papyrus homepage
(<http://www.papyrus.de/files/PapX_TOS_Demo.zip>). AFAIK You can save
documents with this demo version.

Gru�,
Karsten

On my Milan it behaves like on a ST/Falcon with NVDI, i.e. it use a too big fontsize and totally mess up the display. A pity, because 1ST Word Plus is one of my all-time favourites on the Atari. I'd really like to get my hands on the sources and modernize it a bit.

> IIRC there's also some converter program, 1WP2RTF or the like.

Thanks, I've tried it now and it seems to work. It doesn't do a perfect convertion, but good enough :-)

Yes, the files I tested turned out fine when viewed in 1ST View. However, I got a bus-error in Papyrus' textconv.prg, it could be that this binary is damaged.

Thanks, I'll give it a try.

* Only with your cooperation this site can become good *
****

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

emulators

ftp://chapelie.rma.ac.be/atari/emulators/tools/wlnk116.zip
(108.117 bytes) Win_Lnk served originally only to use the Windows links under MagicPC as real symbolic links. More and more other MagicPC extensions are also inserted.

internet

ftp://chapelie.rma.ac.be/atari/internet/mymail-185.zip
(1.333.795 bytes) Nice and powerful GEM based e-mail client for STik/STing/ Gluestik/MagicNet

ftp://chapelie.rma.ac.be/atari/internet/cat/cat544.zip
(1.394.407 bytes) Cat is a mailer/usenet and a MausNet reader. Cat is the main program. It's used to read and write mail/news

ftp://chapelie.rma.ac.be/atari/internet/cat/cput544.zip
(242.136 bytes) Catputz: the cleaner for cat. Cat itself can only add messages to the database, but not delete any. So this is the job for catputz.

ftp://chapelie.rma.ac.be/atari/internet/cat/i2c210.zip
(181.618 bytes) To exchange your Messages not by Maus but by Internet (Pop3, SMTP and NNTP) you need In2Cat instead of the terminal program

utilities

ftp://chapelie.rma.ac.be/atari/utilities/desktops/tera370b.zip
(292.361 bytes) Tera Desktop is a replacement for the builtin TOS desktop for 16-bit and 32-bit Atari computers.

ftp://chapelie.rma.ac.be/atari/utilities/egale04d.zip
(291.323 bytes) Egale 4.1 (german version): The tool for easy file comparisons, alteration and analysis. Contains a patch (Dir_Lwr) which makes it possible to convert the returned string of Dreaddir and Dxreaddir to lower case.

ftp://chapelie.rma.ac.be/atari/utilities/egale04e.zip
(295.788 bytes) Egale 4.1 (English version): The tool for easy file comparisons, alteration and analysis. Contains a patch (Dir_Lwr) which makes it possible to convert the returned string of Dreaddir and Dxreaddir to lower case.

ftp://chapelie.rma.ac.be/atari/utilities/deskconf.zip
(20.334 bytes) Desktop Configurator is a small tool which allows you to select
a particular DESKTOP.INF during boot time so you can boot into different desktops
for work or games.

Have fun,
Martin

I have version 10 and sometimes it crashes when trying to load or import files.
I have a Hades060. What usually works is turing off the cache. For some reason
Papyrus works a lot better. After the file loads in, I just turn the cache
back on.

Hello. Trying to clear out some extras and wanted to offer to fellow collectors first before sending much of it on to the local landfill. E-mail me at lener@vt.edu for more details on any items listed below. Everything priced at $4 or less, magazines only 50 cents apiece (even better deal if you buy in quantity) Shipping at actual cost. U.S. buyers only please. Thanks.

Atari ST Books, Manuals, etc.:
(all clean and in good shape)
Atari 520 ST Owners Manual
Atari Logo Sourcebook
Atari SF314 Disk Drive � manual
Atari SF354 Disk Drive - manual
Atari SM124 Mono Monitor � manual
Atari ST Basic Quick Reference Guide
Atari ST Basic Source Book and Tutorial
Atari ST GEM Programmers Reference (Abacus #3)
Atari ST Graphics and Sound (Abacus #6)
Base Two (Antic) � disk and manual
Calamus Font Editor � disks and manual
CalAssistant � disk and manaul
Datalite 2 (Oregon Research) - boxed
DBMAN V v.5.2 (Versasoft) � disks and manuals
Degas Elite (Batteries Included) � manual
Disk Label Maker (Rock Digital) = disk only
GFA Artist (Michtron) � disks and manual
ICD SCSI Host Adaptor � manual
Imagecopy 4 (FaST Club) � manual and upgrade disk
Pagestream 2 - manual
Paint Pro (Abacus) � disk and manual
Personal Pascal 2 (OSS) � manual
Suzy B Software Treasury � 2 disc CD-ROM set

Thunder (Batteries Included) � manual
Truepaint (Oregon Research) � disks and manual
Ultimate Virus Killer � disk and manual
WordPerfect � boxed with manual and template (not sure if complete)

Assorted magazine issues:
Atari Computing, Atari Explorer, Atari World, ST Action, ST Format, ST Log, ST World, STart

Games and Other Software:
Batman (Ocean) � boxed, PAL?
Brattacus (Psygnosis) � boxed
Megalomania (Sensible Software) � boxed, PAL?
Outrun (Sega) � boxed, no instructions
Populous II (Bullfrog) � boxed, PAL?
Space Ace (Readysoft) - boxed
Sub Battle Simulator (EPYX) - boxed
Ultima II (Sierra) � boxed with cloth map

Note - Games denoted �PAL?� give a rolling vertical screen on my TV

We're ready to start beta testing the next version of our CD writing package, which will support DVD recorders as well. Apart from DVD support, the main new features are:

    . "burnproof" recording
    . support for session-at-once audio CD recording
    . backup of non-TOS partitions

Beta tester requirements:

    . DVD recorder (if possible)
    . a copy of ExtenDOS v4
    . experience with CD Writer Suite v3
    . good command of English or French
    . sufficient time :-) (expect to take 10-20 hours)

Previous beta testing experience would be a help.

If you would like to help out, please email us at:
beta@anodynesoftware.com
and tell us what hardware & software you have.

Thanks,
Roger & Claude
Anodyne Software

Yeah I wonder if people would forgive Hitler if he said he was sorry.

Different situation of course, but this guy totally bashed Aranym
developers and made some way over the top comments.  Once that happens
he's finished with me.  People should learn to control themselves.
Perhaps if I was trying to sell something to the community I would
use a bit more tact, but I'd like to think that my response did have
tact besides the occasional curse word.  I re-read my response
and I still believe that it was fully warranted based on the comments this
guy made (which of course nobody can see now).

Next time maybe he won't act so strongly.  And maybe next time I won't
REact so strongly.  I protect people that do a lot for me and the ARAnyM
crew has done a WHOLE LOT for me.

Thanks,
Mark

Hi!

As for me usenet and other mailing lists I watch made me intentionally
try very hard to overlook any kind of offense. Stick to the facts you
can help with no matter what the guy was touught inquiry looks like at
home. Otherwise you would be off topic the same way as the 'wrong' guy.

STanda

PS: I must say that Francios did the best thing he could at that time.

Yeah.. *sigh* everyone seems to think I was wrong. Oh well ;)

I guess an apology goes a long way in the Atari community. That's
probably a good thing.

Thanks,
Mark

Mark, do you really want to compare a million mass murder with someone overreakting and babbeling nonsense? You would post-mortem-injure millions of innocent victims. Please don't go down to that level.

Ralph

Hello,

If you still have the ADSCSI board, and would like to sell me this
alone, i would be very happy.

Please let me know how much you want for this.

My e-mail is mugorj_at_gmail*NOSPAM*.com

Thank you,

Marcelo.

Try again. My e-mails went through to him, AFAIK. Could have just been one
of those days. :-)

The ATARI ST was just a cheap would-be PC with an 68000 CPU instead of
an Intel CPU and a very weak OS and GUI.

The AMIGA always was a REAL computer.Powerful, great architecture,
superb custom chips and a superior OS and GUI.

So better throw away your ST fast, because STs are crap and should be
dumped in the bin as fast as possible !!!

On my Falcon with NVDI and MagiC, 1WP works fine. I still use it
quite regularly for letters and articles that don't need fancy
fonts.

Incidentally, if IdeaList runs on your Milan, you can use that to
print out 1WP documents with all the attributes (but it disregards
ruler changes).

Regards, /Peter/

I'd much rather see the trolls who first post, then strive to continue
these kinds of threads get run over first. It'd do the world a favor.

:-)

Hi All

Just wondering what is the market value of the following Falcons:

1) MkX cased Falcon CT2b with 20Gb HD

2) SpaceCase cased Falcon CT60 with 40Gb HD

Both with Maximum ST RAM and reasonable FAST RAM.

Thanks

Neil Chester

From what I've seen, bog standard Falcons have been going for typically
$300-400 on Ebay. Sometimes higher.

Expanded/updated ones are worth more, of course.

```

Hi there,

My first computer was an Atari 520STfm and I totally fell in love with the thing. My friends that had Amiga's laughed at my tinny sounds but I couldn't have been happier :-)

I mostly collect Atari coin op equipment now but I still have my ST and I now want a Mega STE and then possibly a TT and Falcon.

So, anyone got a 4Mb+ Mega STE for sale? The more bells and whistles the better!

Many thanks,

Oliver

Cool,

thanks for the fast reply. I thought as much.

What should the 'norm' be expected to look like?

Not like that;-). It looks like a homebrew controller. Most plug into
the assci port in the rear of the machine. Basically a converter.

Merry Christmas and happy new year for all the Atarians !

Here a screenshoot:

http://the.zorro.free.fr/beta7.jpg

And the news:

News:

- PDF:
* Huge quality improvement in the PDF font rendering (Atari specific).
* Zoom function added.
* Code upgraded to xpdf 3.01pl1(2005-dec-01).
- Complete EXIF 2.21 support for JPEG image(now, you can see various usefull informations like when the picture was taken, if the flash of your camera was fired or not, the model of your cam, etc...).
- Now, zView can extract the thumbnails embedded inside JPEG images created with a digital photo-cam.
That means than the thumbnail creation is 20 times faster if the JPEG was created with a camera.
- News options added:
* Skip drive(it's faster to skip the check of the CD-ROM drive for example).
* Smooth Thumbnail: now, you can smooth the thumbnails with various method.
That is very slow and only available on true color or near true color display but the result are perfect(specialy with the lanczos computation).
* PDF font antialiasing ON/OFF.
* Fit the PDF to the window.
- Utilisation of an embedded font to have the same look on any computers.
- Animated interlaced Gif and animated Gif with transparency now supported.
- More zoom levels for the pictures(25, 50, 100, 150 and 200%, previoulsy: 50, 100, and 200%).
- Some function's shortcuts added to the toolbars.

Bugs fixes:

- Many fixes in the PDF code(PDF rotated, problems with some fonts, etc..).
- Missing horizontal SLIDER computation in the PDF and image window.
- Little memory leak corrected in the multi-timer function.
- A memory block was not freed in the file_rename function.
- Some redraw fixed (PDF bookmark, etc...).
- Others littles bugs fixed.

Ciao,
Zorro

Hi Sam!

That�s the Tramiel Brothers (and more, Shiraz Shivji from C= etc..)
contribution to ATARI.

They called ST for SixteenThirtytwo (mighty MC68000 32/16bit)
And the TT, ThirtytwoThirtytwo. (MC68020/030 32/and 32bit Memory)

www.atari.org

The ST can make many things and is IMHO the best MIDI Computer till
now. Often compared to the Commodore128 ;-).

Best Regards,

Daniel Mandic

"Often compared to the Commodore128"

Not by anyone who knows anything about either system.

Two people not grown up and still stuck in the 1980s mind set of "my
computer is better than yours". Unfortunately all is now history, and
these jibes totally irrelevant.

This is usually down to a Troll seeking to be fed.

Hello :)

I have Atari 1040 Ste :)
I have read in the net, that any Atari ST have RF antenna cable with
which one can connect ST to any tv :)
It seems that I can't find such interface on my Atari ST, is it
possible?

Or may be RF antenna cable should be connected to the same place, where
Atari monitor?

Where is RF modulator located Inside Atari case or it is mounted to the
cable?

I am asking because I have no RF antenna cable for Atari, I bought it
one year ago with only b/w monitor.

And another question is about monitor. I can see TOS screen not
fullscreen, but very small, rather big part of the screen takes border,
and TOS screen is only 1/3 of my monitor screen.
I can't find any switcher to tune monitor.
On the back side there are only three wheels for sound, brightness and
contrast, and some switcher above them. If I turn the switcher up, I
can see nothing if I turn it down, I see Atari TOS screen :)

Thank you very much for help.

Hello, when I am turning Atari on floppy drive is making some noise
during a minute, and only after that TOS starts.
Is it proper for Atari St?
Floppy drive is empty during start, but Atari makes some noise with
it...

Thanks

yes. It checks for a bootable floppy.

> Floppy drive is empty during start, but Atari makes some noise with
> it...

pop a blank disk in. It will spped things up.

Its the single "phono" socket on the back. (assuming its an STE. or STFM, plain STF does not have modulator.) If its an STE there should be three PHONO sockets on the back. Two are the stereo sound out and the third is the TV out. However its really only good for games.

> Or may be RF antenna cable should be connected to the same place, where
> Atari monitor?
>

No, but you can get composite out.

> Where is RF modulator located Inside Atari case or it is mounted to the
> cable?
>

See above. Its inside the case on an STE. Single phono on back.

> I am asking because I have no RF antenna cable for Atari, I bought it
> one year ago with only b/w monitor.
>

In the UK you need a Phone to "Belling Lee". Not sure wjat TV's in other countries have for arial leads.

> And another question is about monitor. I can see TOS screen not

> and TOS screen is only 1/3 of my monitor screen.

The borders are big, but usually 2/3 of screen size.

> I can't find any switcher to tune monitor.
> On the back side there are only three wheels for sound, brightness and
> contrast, and some switcher above them. If I turn the switcher up, I

There aren't any. BTW its the GEM desktop that you should see, not the TOS screen. Try setting the thing to "Medium Resolution". Its some where on the last menu.

> Thank you very much for help.

Hi,

It seems that there is a problem with MagiC, the system return:

Datei ist nicht ausf�hrbar! (File is not executable!)
Fehler: -#66 (Error: -#66)

I will try to correct this problem as soon as possible.

Ciao,
Zorro

TOS checkes for bootdrives and such for about 45seconds on bootup, after that time it gives up and you are then at the GEM desktop. If you put a blank disk in the drive then the boot sector of the floppy is read and TOS has "something" actually read, if there is nothing on the floppy then it boots right to GEM.

Hi Clockmeister!

I think you confuse that. Atari ST/TT have the better OS. The MAC
copied it only.
Mac is now with G5 and thirteen ventilators, behaving clunky as an
overloaded PC and that all to play some MP3�s :-)

Thanks, I�ll stay with TOS for that 'similar' you mentioned.

Best Regards,

Daniel Mandic

Anyone have Steffen's (the author of GEMAR and CBHD) current
address? The latest one I had was: steffen.engel@t-online.de but I
got no reply from a mail to him there. The others I have are Maus
addresses but I don't think these are valid any longer.

Regards, /Peter/

I have had it for the last 10 years with PC web browsing! I started on an ST in 1996, and since 1997 when I went PC it all went downhill in many ways

In the Atari ST days, the browser would default to caching web pages in ram, resulting in the ability to flip as quickly through as many of the last pages you had visited as you liked! (you could click the browser back arrow 10 times in a row, and it would actually flip back 10 web pages just as fast as you could click!) It would actually use the 4 megs of extra memory I had so that recently visited pages could simply pop up on the screen instantly from RAM.

In contrast, the microsoft crap seems to default to reloading (usually at an even slower rate than the first time the page was visited!) the whole web page even though I had just been there 15 seconds before. Never mind that there is 300 megabytes of unused ram just sitting there. Any way to make my microsoft crap PC act as intelligently as my ST did back in 1996? Thanks. -SaTcom2

You seriously underestimate the power of an 8mhz 68k. The problem with
the MSTE's serial port is that the chips ARE NOT the same. Although
they are pin and signal compatible, they are entirely different
revisions of the same chip. If you lift a SCC from a TT and place it in
the MSTE then voila, 230K.

I was just wondering, I have my Wizztronics Falcon case, which I love, but its purely black. Nothing wrong with the color that defines the absense of color/light as we know it, but my accessories around it don't match.

Can anyone offer me some helpful hints/sage advice, etc, etc, for painting the following so they match?:

monitor
mouse
floppy faceplate
CDRW faceplate

I'm using a DEKA interface so I've got the black keyboard part covered already.

Thanks gang! :-)

Hi there,

I finally decided to get "rid" of the Atari-Setup I inherited. The Atari
began to feel quite lonely between all the commodores :).

http://cgi.ebay.de/ws/eBayISAPI.dll?
ViewItem&item=8728608235&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

The set includes

- Atari 1040ST
- SM124 Monitor
- SF354 external Diskdrive
- 2 Mice
- Megafil 30 Harddisk
- Various Software (Games, 40 Disks)
- All cables

The Atari itself is in working condition, the Megafile I don't know
about, I did not know how to test (as I said, I'm more into
Commodore-Stuff).

I'll ship anywhere, as long as the buyer pays postage :). Shipping to
Europe (most countries) would be 32 EUR

Dave

(if you have questions, email me at david.mueller@post.rwth-aachen.de)

Version 3.70 of Tera Desktop (TeraDesk) open-source desktop is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

TeraDesk is currently the only open-souce desktop available for 16-bit and 32-bit Atari computers. Developer's goal is to maintain TeraDesk as a small, simple, fast and reliable desktop, which can run on any TOS-compatible Atari computer, clone or emulator and which can be be functional and competetive in the modern multitasking environments and all flavours and versions of TOS-compatible operating system(s), while keeping, as much as reasonable, familiarity with the original TOS desktop.

Several new features have been added since the last published version, some of which have often been asked for by the users (e.g. the 'autoselector'). Also, a number of bugs has been fixed.

Users are advised to read the documentation before running the program ;) Some features of TeraDesk may not be immediately obvious.

Have fun.

Hello,

By disassembling the software GT-Look II 2.11 I noticed that the software seeks with the launching of the files to format LMD: DAP_OUT.LMD and FILTER.LMD. They obviously make it possible to activate the menus Filters and Print of GT-Look II. My deutch version 2.11 does not have which it and in spite of my research on Internet, I did not find anything. Would somebody have that with his version? They would also seem that they can be put in a file Modules (a little as with Da�s Picture). If somebody has a version into English� Thank�s by advance.
Florent

I'm trying to identify the name of a game I saw on an ST many years ago -

I think the game may have been french
The game had a sort of static screen with a very weird alien and
as I recall very odd digital voice giving instructions on how to proceed.

The weirdness of it is what I remember most - I don't think I ever saw anything else like it

I know thats a bit vague but does it ring any bells with anyone?

daddy

Was wondering how ARAnyM stacks up against MagicMac/PC?  Mainly in the area
of ability to connect Atari ST/TT/Falcon hard drives (e.g. Syquests, etc)
through a SCSI connection and be able to read the AHDI partitions and
extract files.

Would like to do this on the PC.  MagicMac seems better at doing this since
SCSI is better supported on the Mac platform as oppose to the PC.

Thanks,
Glenn

These SCSI peripherals are obsolete ... We need to take account of
FireWire or USB peripherals, which is perfect with Macs ... ARAnyM
is not an emulator, and backward compatibility with old peripherals
is not the main point. ARAnyM is a new ATARI platform ...

Do you understand ?

Regards,

Hi,

> By disassembling the software GT-Look II 2.11

Did you plan to write a replacement or additional modules if you do such
a work?

> My deutch version 2.11 does not have which it and in spite of my
> research on Internet, I did not find anything. Would somebody have
> that with his version?

I cant help. My version 2.11 also has no additional modules. Maybe only
the base software was set to freeware and not additional filter modules?

Regards
Michael

Hi, been a while since I got any decent demo's. Any recommendations? I
have all flavours of Atari (XL/XE, STFM/E, MegaSTE, TT030 and Falcon).
Recent discussions on comp.sys.atari.8bit have reignited my interest.

Thanks

Mark

on XL/XE try 'Numen', bu you'll need mor then 64KB to do that.

I have a ET 4000 Graphics Card that came with
2 Panther Graphics Adapters.
```

No one has been able to give me any info on the Panthers yet, so I was wondering if there is a way I can use the ET 4000 Card on a MegaST4 or MegaSTe or other Atari ST computer?

I don't have a VME adapter for it, but I do have a old VME Graphics Card for the MegaSTE called the AlberTT.

Now, does anyone know if the VME part can be removed from the AlberTT and
connected to the ET4000 and then plugged into a VME BUS on a MEGA STE?

Or some how get it to work with a MegaST4? I'd really like to get it working
with the MegaST4, or 1040STE. If I had some info on those damn Panther Graphics Adapters. They have some extra ICs, about 3 that I have no idea on where they go. The board seems to connect to the 68000 socket, and has a socket on top for the removed 68000 chip. Also cables that run to the ET 4000. But have no idea where those 3 ICs go or if they are even used.

Someone out there must have used one of these before???

Really could use some help or advice.

phantomm@bellsouth.net

> Don't listen to that nonesense, it runs on top of windows, linux or what have you, "ARAnyM is an emulated ATARI platform" ...

I know this is religion for some, but..

Personaly, I think it's more like a virtual machine, since it doesn't really emulate an existing machine (only parts of the F030 are emulated afaik). I think it's a really nice approach, since it would cost too much cash to design a "real" machine with the same specs (well, it isn't possible at all since we have no 1ghz+ 68k CPUs..).

They've implemented some really neat ways of using native (non-emulated) hardware from the host platform too.. Naturally, it's not compatible with hardware banging stuff, but on the other hand, a "real" clone isn't compatible with such stuff either..

regards

I guess this issue can be debated back and forth forever. Personally, I simply decided I don't consider a virtual machine to be a valid upgrade path for me personally. In fact, I don't view it differently than any emulator in any way. Other may disagree, but having to run on a host OS with MiNT/TOS needing a CPU emulator in order to keep ticking, that ain't acceptable for me.

If it can keep a few Atari users/developers from abandoning the platform however, that is all good though. As long as software is not written explicitly for it, there should be no problem.

The only people I know of that have used an ET4000 graphics card are Hades owners. You may want to go to Lonney Purcel's website and look on his list of Hades/Milan owners and see which ones have that card installed. I use a Nova card, but I do have the driver on my hard drive for the ET4000.

The Snowman demo is a real good one for this time of year. It runs off of a
disk and is about 800k. Has excellent digital sound.

I agree 100% with Lonny here. Aranym is no less an emulator than any other.

>
> I know this is religion for some, but..

This is all fine, as long as these things are kept out of "our" operating systems, like FreeMiNT. The right way to support this is via drivers.

Best Regards,
Odd Skancke

Hi,

>>>Don't listen to that nonesense, it runs on top of windows, linux or wh=
at
>>>have you, "ARAnyM is an emulated ATARI platform" ...

Yes :) And it is not an "emulated ATARI (existing) machine" :) So it is
not an emulator, it is a new (virtual) machine, and also an ATARI
platform. I agree a 100% :)

> I agree 100% with Lonny here. Aranym is no less an emulator than any
> other.

Do you run DHS 68060 demos on an emulator, altogether with Gemview, for
instance, that is compatible with the first ATARI hardwares, and not
maintained since about early 90s ?

>>I know this is religion for some, but..
>>
>>Personaly, I think it's more like a virtual machine, since it doesn't
>>really emulate an existing machine (only parts of the F030 are emulated=

>=20
> Virtual machine, emulator .. where is the difference?

Well ... A virtual machine contains an emulator for the bytecode of
the virtual machine. It also has a Just In Time Compiler, and machine
APIs ... An "emulator" is a restrictive way to talk about ARAnyM,
because the goal for its development is not to "emulate" an existing
ATARI machine ;) You may use it that way, but it has much more
potentialities, indeed !

```
>>afaik). I think it's a really nice approach, since it would cost too
>>much cash to design a "real" machine with the same specs (well, it
>>isn't possible at all since we have no 1ghz+ 68k CPUs..).
>=20
>  Not yet, we have.

What kind of hardware are you dreaming of ? That is the basic
question that answers to the ARAnyM's goals of developments ...

>>They've implemented some really neat ways of using native
>>(non-emulated) hardware from the host platform too.. Naturally, it's
>>not compatible with hardware banging stuff, but on the other hand, a
>>"real" clone isn't compatible with such stuff either..
>=20
>  This is all fine, as long as these things are kept out of "our"
> operating systems, like FreeMiNT. The right way to support this is via

What community are you talking of ? Don't you think that "we" are going
the same way ?

Why not? NVDI5 supports AFAIK ET-4000 Cards...

So ... it all boils down to the fact that all these fancy terms of
different layers of software are there to ultimately accomplish one
goal, emulate a given hardware environment for Atari software? Doesnt
that make it an emulator?

>

Ok .. but it is an emulator? Even if it doesnt emulate a specific
machine, it emulates a given 'range of hardware' so to speak. Only when
the operating system runs native on a given hardware platform it stops
being an emulator. Even if that operating system have to emulate a CPU
to run native applications, as happened when Apple switched to PPC, and
how Morphos now runs old m68k apps. Ofcourse, I take it that agreeing on
this point is never gonna happen, so I think we drop the discussion
agreeing on the fact that we dont agree :)

>
> >>afaik). I think it's a really nice approach, since it would cost too

I very much would like to port FreeMiNT/XaAES to the Pegasos platform. But I dont know how much interest there would be, because such a port would mean the operating system would consist of FreeMiNT/XaAES, and older AES's would not follow onto this new platform. MyAES would most probably follow, since it is being developed...

Yes, this would offer a valid upgrade path and give us a powerful
hardware platform!
This is stuff actually worth dreaming of :)

Regards,

/Joakim

ST:

Flipo
O Demo
Virtual Escape
Odd Stuff
Suretrip
Fantasia
Froggies over the fence
Punish your Machine
Cuddly demos....

STE:

Braindamage
Overdose
Necrosys

Falcon:

Hmmm
Undrescore (_)
Obnoxious
Sonoluminiszenze
Scarface
ATS
EKO system

just to name a few.. Warm recomendatios that u get No Fragments CD compilations. A lot of ST demos and stuff there, all nicely packed etc. Also it is recent compilation as well.

Then, you get really frustrated for this matter in present situation ;)
If you don't make usage of ARAnyM (virtual) machine. No "real machines"
around ;)

ATARI rules ... Don't dirt the thread, please.

Regardless if we like it or not, any future TOS/FreeMiNT platform will have to include *some* degree of emulation, or we won't be able to run stuff unless we have the sourcecode (and even in that case we run into problems unless the whole shebang is written in C/C++).

For me, Aranym could never replace the feeling of the real deal (I have a CT60 too), but it's the only way of having a fast (semi) TOS-laptop.

ARAnyM can use any device supported by the host OS. Just read the
documentation. But to be on safe side, you'd better make an image file
from your SCSI hard disks before trying them with ARAnyM.

> Would like to do this on the PC.  MagicMac seems better at doing this since
> SCSI is better supported on the Mac platform as oppose to the PC.

Hardware is the same, whatever the platform, as long as you have a driver
for it. SCSI is no different from that point of view.

PS: At last, you have an answer to your question :-).

Sorry?  That did not make sense.

The bottom line is that when the Atari ST computer was purchased, it came
with a copy of the system disk in the box.  So if you now own the machine
and do not have the disk, you are still entitled to that disk.  I don't even
think this sofware was licensed as it is not even a Operating System!  I
don't even think it's against the law to get a copy of the disk, if you own
the actual ST machine with TOS inside it.  Because the disk came with the
machine to begin with!  Does that make sense?  It does to me.

TJ

Your knowledge is correct here: NVDI5 always was sold complete with the
ET4000 drivers (that were sold as a separate package in earlier ver-
sions, I used to run "NVDI3 ET4000" on my TT030 until I sold it, e.g.).

Thus, the Tseng Lab ET4000 chipset is the best supported one on the
Atari.

HTH,

Thorsten

Thanks for the answer.

My main intent is to be able to move files from old drives and get them
archived onto CDR or DVD+/-R. Trying to do this on an older Mac and get the
files moved over to a PC can be a real pain. Just trying to simplify the
process.

Regards,
Glenn

> that make it an emulator?

There are a lot emulators for ATARI platforms. Some of them are designed for games, other for GEM compatibility etc. They are taking account of precise TOS versions and want to be as closer as possible to the original hardware, for the resolutions, the clock frequency etc. Don't tell me that you don't know them ! I personally helped to developments of STonX and TOSBox, for instance ...

What is the interest of the JITc on an emulator, that gives 20 times the speed of a Hades 60, if we want to emulate a Falcon 030 running at 16MHz to play games ?

What is the interest of a Unix host filesystem, if we want to run ATARI games located in diskettes MSA archives ?

If you don't know what is an emulator, then use them if you have the usage of those, and stop calling ARAnyM an emulator. It takes advantage of the most recent hardware and peripherals to build a (virtual) machine hosted by the most recent OS and technologies.

It takes advantage of the most recent machines and OSes to make it available in an ATARI (development) environment.

Please experiment ATARI emulators to make your own opinion.

>> Do you run DHS 68060 demos on an emulator, altogether with Gemview, fo=
r
>> instance, that is compatible with the first ATARI hardwares, and not
>> maintained since about early 90s ?
>=20
> Not sure what you are getting at here...

No emulator so far can run CT60 or Hades 60 softwares except ARAnyM.

And it runs them perfectly 20 times faster or more ! What is the interest to play to PacMan game 20 times faster ? You couldn't be fast enough to handle the game at this speed. This powerful speed is the way to build new applications etc. To use hardware OpenGL cards that didn't exist for previous ATARIs, using host system drivers etc.

Are you so naive that you don't know that many technologies have evolved since the latest ATARI hardware were produced ?

>> Well ... A virtual machine contains an emulator for the bytecode of

>=20
> Ok .. but it is an emulator? Even if it doesnt emulate a specific
> machine, it emulates a given 'range of hardware' so to speak.

It runs the whole 68k family instruction set. It neither emulates an ATARI machine, nor a precise ATARI (Motorola) processor. It is not an emulator. It is a virtual machine !

> Only when
> the operating system runs native on a given hardware platform it stops
> being an emulator.

Then would you call Java (or .NET) emulator, because there's no Java machines ? Virtual machines have now the power of the hosting machines, thanks to JITc mainly. No hardware platform required for those !

> Even if that operating system have to emulate a CPU
> to run native applications, as happened when Apple switched to PPC,

This was an emulator. Not a virtual machine ;)

> and
> how Morphos now runs old m68k apps. Ofcourse, I take it that agreeing o=
n
> this point is never gonna happen, so I think we drop the discussion

Because you're wrong. Not enough knowledges about what you're
telling about.

>> What kind of hardware are you dreaming of ? That is the basic
>> question that answers to the ARAnyM's goals of developments ...
>=20
> I very much would like to port FreeMiNT/XaAES to the Pegasos platform.=

It won't run without ARAnyM that is a portable ATARI platform.

You may be rather interested by a development environment that allows
you to port your applications, rather than a virtual machine like
ARAnyM that runs independently from the hosting OS and hardware.

> But I dont know how much interest there would be, because such a port
> would mean the operating system would consist of FreeMiNT/XaAES, and
> older AES's would not follow onto this new platform. MyAES would most
> probably follow, since it is being developed...

Yes ... You're speaking about portable development environment.
That has nothing to do with the principle of the virtual machine.

>> What community are you talking of ? Don't you think that "we" are goin=
g
>> the same way ?
>=20
> I dont really understand what you mean here either ... :)

You are speaking, if I understood, of the ATARI OS (freeMiNT). I'm
speaking about the ATARI virtual machine (ARAnyM). We need both to
go forward ... We are going the same way :)

Hi Francois!

> To use hardware OpenGL cards that didn't exist for previous ATARIs,
> using host system drivers etc.

Thats all very nice and stuff, if only aranym did this really really well, but unfortunately this is not the case. Undoubtedly it has made a lot of progress and for the first time in years I have acutally been able to use it.

But I have stopped again, since there are too many bugs. Too many layers of software are messing it up.

LibSDL has bugs, fvdi has lots of bugs and features missing, aranym itself has bugs, the host file system driver is incredibly slow (as I have shown on the aranym mailinglist), the overall handling of aranym is still a bit sloppy compared to e.g. MagiC-PC.
Another cool feature would be: save/restore state so u dont have to reboot.

But aranym cant even shutdown mint properly here, well, it might do so without fvdi, but whats the use of aranym without fvdi?

I could extend my list of deficiencies and shortcomings probably forever! There are so incredibly many sources of bugs and flaws (and not all of them come from the aranym dev team at all).

Dont get me wrong, I am not saying aranym is crap. Not at all. But its nowhere near you claim it is. All I am saying is that it is very far from being usable as a stable and reliable environment.

I have been following aranym almost from its start and never have I seen a stable release of it.

And that is quite a difference to real hardware:
All the Atari clones I know are working very reliable. My Milan has uptimes of weeks, while with aranym I am really happy if it runs for an hour.

So my opinion is this:
Before any new features are added to aranym, there has to be a huuuge betatest phase with a looot of bugfixing and polishing up.

And when that day finally comes, then aranym is a good thing, but for now it is unfortunately no more than a nice tool I can play around with for a bit and say:
Hey, sweet, but thats it.

Cheers, Ingo =;->

Thanks guys, I have most of those. Froggies is one of my all time
favorites as is flippo. I can still remember the look on the Amiga guys
face's when I put Froggies on for the first time;-)

Mark

> of ability to connect Atari ST/TT/Falcon hard drives (e.g. Syquests, etc)
> through a SCSI connection and be able to read the AHDI partitions and
> extract files.

I have connected my real Falcon IDE disk tomy PC, started aranym and it directly read it. So if you are really just looking for backing things up, I guess, aranym can do a good job for you.

But I wish you good luck setting it up and hope you dont experince crashes. The best thing you can do, is make a disk image, e.g. with dd command under Linux.

Be very careful with the dd command as it can destroy entire disks easily.

> Would like to do this on the PC.

In this case,the best thing is probably this:
Start Linux. If you dont have Linux, get a live CD (e.g. Knoppix) and then make an image of your harddisk. Then try playing with aranym.

> MagicMac seems better at doing this since SCSI is better supported
> on the Mac platform as oppose to the PC.

Not sure if I would trust MagiCMac so much,it is pretty buggy. But so is aranym, but with aranym you can use a disk image and thus not do any damage to your real data.

Let us know, if u have trouble setting aranym up, I am sure we canhelp.

Cheers, Ingo =;->

Hi SWE!

> Well some people may be happy with virtual sex, or emulated one, i am
> not! Nothing beat real experience imho ;))

LOL, most hilarious comparison ever :-)

Imagine how lame your flat would look, if it was filled with CDs with aranym on it instead of the cool old real Atari machines ;-)

I agree that 'emulator' is too rude a word for Aranym.

I like to talk about Aranym in itself as a machine.

Like: "I have a 2,8 GHz Aranym next to my dear old TT030"

Nevertheless, something has to be done to make Aranym execute a certain codebase on a machine that wasnt designed for it.

Aranym needs a microcode for each hardware not able to execute the codebase.

It is very dificult to avoid talking about this question by avoiding certain words.

I would suggest to use the words 'microcode' or 'execution machine' in stead of 'emulator' and 'execute' in stead of 'emulate'.

Does anyone recall the name of the software for loading alternative TOS roms into ram? Looking for a software alternative to replace TOS 4.02 on my older Falcon, with 4.04. 14 meg of ram so plenty of space;-)

Mark

Hi,

Do you know where to get a English manual or instructions on installing
a Panther
Graphics Adapter with a ET 4000 on a 1040STE or other Atari?

Bugger, doesn't look like it supports 512k roms.

Oh well, worth a try. Would have been interesting trying to set up the
NVRAM mind you.

Mark

That makes sense, since hd drivers use interrupts themselves.

I'll make some tests on my Falcon this afternoon

Hey guys. I have a question. I've been bidding on some games from the UK.
I always thought that basically you could run any ST game anywhere, as
long as it didn't have problems with the TOS version/machine you were
running it on. I mean, I thought that, for example PAL/NTSC games would
work on either PAL or NTSC machines, albeit with some differences like a
slight speed increase/decrease and slight screen size increase/decrease.
In worst case scenarios, you can run a 50mhz booter prg. for some games.

Is that assessment not accurate? I'd hate to think I was bidding on
software that I just can't use! :-)

Thanks everyone.

Hi
I think you may need to install HSMODEM in the auto folder to access the higher transfer speeds.

IIRC the CPX's don't work correctly, and will not go past 19,200. The
CPX is worthless anyway. What you need is a comms program that will talk
directly to the ports. Connect or Stalker will do the job.

Well on my ST I could flick to 60hz and they just made the screen a little
bigger, not sure if you can actually have a pallette based system on NTSC ?
would kinda be a bit pointless wouldn't it ?! no idea really ;-)

Chris

Hmm I have that TOS disk and mine is not TOS 1.0 but a different TOS. It
has a green/white patterned backdrop kinda like TOS 2.06. It is a early TOS
for the early 520ST computers with a date of 1985. If you find it let me
know and I will upload it.

No the point I am making is that the disks are not the OS, the TOS is. So
to copy the disks you are not copying the Operating System. But in either
case I am sure Atari does not care if we offer someone a copy of a Language
disk for a 20 year old Atari 520ST computer they bought for $2.99 at
Goodwill. :P

My link replaces the internal Atari interface and provides the full SCSI ID no range.

The device is connected as stated above.

>
> That makes sense, since hd drivers use interrupts themselves.

    Yes, but i was expecting the contrary: closer to the theorical frequency
wihtout HD and CD. And, actually, if you remove the peripherials, the
interruptions seem to work worse!

    Guillaume.

Aren't there two serial port CPXs? I think youse are talking about
the old one. Get the newer one. One place to get it is in the STiNG 1.26
distribution.

Mark Bedingfield <mark@nomorespamplease.computercom.com.au> writes:

: Ronald J. Hall wrote:

Hi,

I have an old atari ST shareware program called SnacMan. I cant find
any PC emulator that can run it properly. Does anyone have any ideas?
Tried Gemul8r8, STeem. The closest was pacifist but as it is DOS, it
wont run on my new computer!

Cheers
squelch41

> taken one of these apart?
Yes, I've taken it apart, on my homepage (link, see below) there's an artic=
le how to put a PAK into the STacy, but it's german only. But you will find=
 some pictures, where the screws are to disassemble the STacy without wreck=
ing it.:-)

Ciao

Great!

Info like this is what I need. I have heard that it can be hard to take the STacy apart if you aren't careful.

I believe the STacy has RainBow Tos 1.4? Can it be upgraded to TOS 2.06 if one had a TOS 2.06 upgrade board for a ST to use in the STacy?

I have a Tweety Board new in the box. Which allows Stereo on older STs. Will this work on the STacy too?

If anyone has done any upgrades to a STacy, I would like to hear about there experiences and what was done.

Also, if anyone has a TOS 1.4 to TOS 2.06 upgrade board, do contact me.

Hello Phantom,

> I personally don't like the idea of using TOS chip Image
> Copies on PCs. Why not just get a ST or STE and use it
> instead.

In my case because the opportunity to buy an ST or STE had not presented itself since I moved to the U.S, leaving my STFM behind. I'm keen enough that I would make physical room for one, but I can believe that wouldn't be practical for everyone. I've seen ST emulators used on laptops and even PDAs, which is nice for those of us who lack an ST Book (which wouldn't work well with colour software in any case). An emulated ST can save someone the cost of an ACSI->SCSI adaptor and an external hard disk. I imagine they're useful when it comes to software development too. If copyright is the main concern, EmuTOS makes an interesting alternative to copying Atari ROMs.

Hello Patrice,

The "Howto" looks like a useful document. I would like to
help out but ARAnyM does not seem to work on NetBSD for some
reason.

I don't have partitioning software, but I should have a text
file somewhere that explains quite clearly the ST partition
format. Armed with this and a disk sector editor it should
be possible to create a partition, or perhaps to write a new
partitioning utility. Let me know if you want me to dig up
the file.

See page 11 of the BEST catalog, listing both a TOS 2.06 and up switcher board, and the PAK. Yes, they seem to be available, but to use one with a Stacy you would have to rack mount it, which sort of defeats the purpose. They are nice machines, even if you do not have a very strong lap.

Thanks, but I know the partition root sector. My goal (and the howto's one) is to explain how to get a workable ARAnyM configuration. Like when you first boot your Atari (without hard disk driver to boot from a hard disk), and wonder how to put software on it.

Once you have a hard disk image partitionned and usable from ARAnyM, your virtual Atari machine is on, waiting for you, and the howto will stop there.

PS: I also forgot to list the ICD hard disk driver, does anyone could test it?

Some of those programs have a built-in function that will switch between the two. I thought I saw a program accessary file that would do it. I have have to look and see if I can find it.

Hi, I'm searching for information on game programming for the Atari ST.
I've been doing google searches, but all I can find are emulators,
museums, and I even found Devpac! But nothing on actually creating
sprites and rendering graphics and things like that. I did some
searches on Amazon.com and some titles came up, but they are so old
there were no synopses. Can anyone point me to a good source of
information about game programming for the Atari st?

jim

Ok, here's my tests with a Falcon030+HD driver (TOS 4.04):

Input frequency was 21943. (theoretical frequency=21942.85714)

```
Time (1/100 sec): 12013
Counter         : 2624587
Real frequency  : 21846.98048
Difference      : -0.4369379153
```

Then I re-ran the test with no drivers loaded:

```
Time (1/100 sec): 12019
Counter         : 2626119
Real frequency  : 21849.72959
Difference      : -0.4244093987
```

It seems that the Falcon behaves like it should: Turn off the hd
driver and it starts coming close to the theoretical values.

Anyone else to do some tests?

    Hi,

    I remember that STOS basic was a complete environment for developing,
especially games. Is it available on line somewhere? I can't say. But it's
worth trying...

    Good luck!

    Guillaume.

http://www.reservoir-gods.com

Code   : a "game" library for ST, STE, TT and Falcon.
Maggie : some nice programming tutorials. (But it's a pain to read, as they do not come as TXT files but are embedded into an interface.)

Or search through programmers heaven: http://www.programmersheaven.com/zone20/mh62.htm

Good luck :)

Philipp

Hi Phantom,

> Info like this is what I need.  I have heard that it can be hard to
> take the STacy apart if you aren't careful.
It's only hard the first time you do it.:-)
You have to be very carefull when removing the keyboard, because it's conta=
cted with a little foil that is very, very sensitive. If you destroy it you=
 have a big problem.

>=20
> I believe the STacy has RainBow Tos 1.4? Can it be upgraded
> to TOS 2.06 if one had a TOS 2.06 upgrade board for a ST to use in the
> STacy?
AFAIR you can only use boards that are attached to the CPU socket, because =
the ROMs in the STacy are different to that, which are used in regular STs.
But for attaching it to the CPU socket you have to solder out the CPU.
=20

Hi,

=20
> A PAK in a STacy!  Way Cool!!!
Yes, it is.:-)
On the PAK board is also a TOS 3.06, so you get all in one. Another solutio=
n would be to install a Speeder like Hypercache Turbo+ or something similia=
r.
And a new harddisk is recommended, the original one is small, loud and slow=
, but then you have to do some work on the STacy "SCSI" Controller.
=20
> Are the Pak boards still availabe, if so where and about how much
> do they cost?
You will find them sometimes on (german) ebay.

Ciao

as Andy says, I can't carry my ST around with me but I still like to play
Atari games. With STEEM and a USB game pad I can play meny of my Atari games
on my laptop. In fact as my main ATARI, is a TT030 I can't play them on it
any way:-(

No its not. The MegaSte's serial port is not reliable above 56k, while
the TT's is solid to 230k. I should know, I spent days testing the
ports on the MegaSte, TT, Falcon and various PC's for a serial
networking project I was working on a few years ago.

The chips are the same, what is different is how much CPU overhead is
needed. The 16Mhz 68000 is not able to PHYSICALY sustain these speeds
the the serial ports are. An accelerated MegaSTE would run at full throttle.

Mark

I was thinking of nothing yet. :-)
The road ahead I mentioned in a previous post will be
at least a year long.

At the point you've reached now, it would be rather
easy to build Eureka ... Wouldn't it ? Is it supported
under ARAnyM ?

Best regards,

Any Pure C builds of Pure C replacement libraries can be used with
or without translation.
A library compiled by Pure C can be published under the LGPL
Once they are compiled by AHCC, the licence can progress to GPL.

Original Pure C libraries can be used by legal owners of Pure C.

> And I think my eyes and I cannot use a programming editor without
> syntax highlighting any more!

AHCC can display C keywords in bold.
You can always use another editor in combination with
the seperate components of AHCC.

AHCC compiles C or S on equal terms. There is no intermediate
assembly stage between C and O.

AHCC can mix C and S on the function level where assembly code can
address C declarations.

Assembler and compiler are not separated, the latter makes heavy use
of the infrastructure of the compiler. I didnt want to repeat
usefull code (like the preprocessor ;-).

But as it is intended to compile pre-processed C source code, I

> guess there is no internal macro-language (INCLUDE, MACRO, REPT and the

The assembler will have all the features a good assembler should have.

I'll write one as part of the doc's.

I write clean app's :-)
If TT-Digger works with Aranym, AHCC will sure do the same.

My Aranym stopped starting up after I switched Suse's.
Havnt got the time to figure out why.
Should probably upgrade to 0.9

AHCC should look like working instantaneous with Aranym-jit
on my 2.8 GHz Linux box.

I still prefer good old TT for Pure C development
(uncomplicated single TOS, reset in 3 seconds :-)

Hello,

I picked up a Mega STE and a 1040 ST today at a good will, but sadly they didn't come with a monitor. I don't care if it is monochrome or colour, just as long as it allows me to reach the maximum Mega STE resolution (i believe this is 640x400?), as I will be using the machine to run music programs.

I want to find one in Ottawa, and I will be able to pick up anything I can get.

Thanks a lot!

- Peter

Well can't help from Melbourne;-). However, if you want 640x400 you will need either a Mono monitor or a VGA monitor. It is possible to build an adaptor to allow an ST to run mono on a VGA monitor.

Mark

There is an important difference between the Hades and the Mega STE: The Hades has a completely different SCSI interface. You may be able to connect an 80 GB drive to the Hades, but this does not mean you can do the same with the MegaSTE. As already mentioned limitations apply if you want to use the internal host adapter.

The drive IDs are in no way hard-coded. Partitions on the drive with the lowest SCSI ID start with C:, and then the drive IDs will be assigned in ascending order, including any other drive. In other words, the partitions on the external drive will not be C:, D: etc. anymore but something like G:, H: etc, depending on how many partitions were found on the drives with lower IDs. There will just be a shift of IDs.

    I made two more tests:

    Theorical frquency: 21942

    MegaSTE alone, boot from floppy: 21777
    MegaSTE +HD + CD : 21843.

    The interruptions are sensible to the environment.

    Guillaume.

Hello,

I am currently writing a HOWTO to configure ARAnyM from scratch. I just started trying some various hard disk drivers to partition a hard disk image. I tested HDX (Atari), Cecile and CBHD. At the moment, only Cecile reaches the end of the operation.

However, I don't have HDDriver (demo does not allow partitioning) neither SCSI-Tools to do this test. So, if anyone has either of these drivers and an ARAnyM setup, could he make the test and mail me the result (or post it there), so I can add it to the HOWTO.

Here is the in-the-work HOWTO (sections 5 and 6 for hard disk images):
http://www.sophics.cz/cgi-bin/viewcvs.cgi/*checkout*/aranym/doc/aranym_from_scratch.html

Hi Ronald!

RJH>I'd lose the partition scheme on the external hard drive, right? I
RJH>mean, there can't be more than one "C", "D", etc, etc,..

Well, provided you've got four partitions on each disk, you'd have the partitions of the hard drive with the lowest ID (or first in the row with HDDRIVER) as C through F, followed by partitions from the next hard drive as partitions G through J. So, if some config files are pointing to absolute paths, and not relative or $home, those would have to be altered. For everything else, the actual drive letter of where the data is doesn't matter. Well, with one exception: MagiC has got to be booted from the same drive letter it has been installed on.

With best regards
Ekkehard

Rodolphe, What size PSU is needed with a CT60 and drives(HD & CD)?

I've been looking at these mini itx PSU's..

http://www.logicsupply.com/default.php/cPath/40_65
The "morex" PSU' 80 Watt to be exact.

Thanks,
Rob

Well Peter I would just either order one off the net (Lots of people are selling them cheap or just get one from places like Best Electronics) or just buy a VGA adapter. This adapter allows direct hookup from an Atari ST to a VGA monitor, but will only give the monochrome mode.

No, you can get one of those with an external DC 12v psu for house input. Thin clients use a similar solution with Mini ATX boards. It's a common solution and relegates much of the PSU out of the case.

Thanks,
Mark

Rob,

I remember someone measuring their falcon and it used something like 45 watts. Whatever it is, one of these Mini ITX jobs should handle the load no problem, presuming you don't have 500 drives. If you do, just get rid of em all and get a recent 40gb ide (which will be silent compared to most of the sub 10GB scsi/ide disks we all use). That's what i did and I'm sooooo glad I made that decision.

Thanks,
Mark

I have a Link in my machine and have an internal 4.5Gig drive plus an
external 4.5Gig along with 2 CD-rom drives and a 16Gig DAT drive

Hmm, I have this "game". Its available for many formats, Atari 8bit, ST,
etc,... I'm not sure what you mean when you say you have the "BIOS"...

I would guess that it is available in one of the archived disk formats.
Many ST games are...

Hey. Thanks for the reply. How did you hook up the internal drive? I mean

you didn't use the internal (stock) Mega STe adapter right? Otherwise you
would only get 1 gig of that 4.5 gig drive.

Thanks.

Hello, Everyone. I have recently moved and my Atari ST won't read the
external hard drive. I'm rusty on the Atari. Do I connect to the
HD(external) "IN" or "OUT" ? The external HD makes noise when I turn it on,
but it doesn't seem to be as loud as before. I've tried installing an
external disk from the Atari options menu, but that didn't work either.

You might say I need a lot of help.

Thanks guys

Jo

I would like to thank everyone for their help. A very generous person
in Ottawa gave me an SM124 monitor today and everything is up and
running beautifully.

- Peter

Ahem...

Yes, there *is* a game called "HItchhiker's Guide to the Galaxy".
Separately, there is *also* a book titled _Hitchhiker's Guide to the BIOS_.
The title of this book is most certainly a play on the title of the game, or
of the scifi book that preceded it.

Connect DMA from Atari to DMA in on hard drive.
First start hard drive, wait 30 sec, start your st.

Regards, Robert

Ah. Thanks for the info. I guess I'll have to look it up. I'm supposing
its a guide to BIOS use, but nothing actually to do with the original game
or book or film...

Thanks.

Hi   Ronald

I have a link 97 with a daisy chain cable running from the internal drive to
a centronics socket on the drive bay cover. I'm also using magic and
HD-driver so can see every byte of every drive.

>> I have a Link in my machine and have an internal 4.5Gig drive plus an

>> external 4.5Gig along with 2 CD-rom drives and a 16Gig DAT drive
>
> Hey. Thanks for the reply. How did you hook up the internal drive? I mean

===========================================================

so what are you implying ant ..is this a book for programmers?
or a book for role playing gamers?
if it is about the atari programming"bios"i am very
 interested in it's nature,and request a copy.....but if it is about
the stupid space warp adventue series book,hitchhikers guide to the galaxy
 i definitlly want nothing to do with it.

Hey Steve,

I've got a MSTe and a Link 97,
```

Are you using the Link 97 with the MSTe's DMA port on the back?

If so, Do you have the internal hard drive controller dis-connected from the motherboard or is it connected with no hard drive connected to it?

I've haven't used the Link 97 before, been using a Link II.

My Link97 came with German docs, and my German isn't too good.

The Link 97 has a 50pin connector and two DMA ports, correct?

I am assuming one uses the 50 pin connector to connect to hard drives.

And one of the DMA ports connects to the DMA port on the MSTE?

If this is correct, what is the other DMA port for? (For other hard drives?)

Or do I have it wrong?

phantomm@bellsouth.net

Greetings,

Recently got a STacy and was wondering if anyone has taken one of these apart?

I was thinking of putting in a larger internal hard drive.

Are there any problems with taking a STacy apart and anything I should watch out for?

Also, should I take it apart with the Top Case facing Down or Up?

And are there any other upgrades one can do to a STacy, like the TweetyBoard upgrade, TOS 2.06 upgrade, and or any speed upgrade?

Also, is it possible to replace the Mono LCD Screen with a Color one?

If one can connect a Color LCD Screen, would TOS reconise the Color screen automatically and boot up in a Low or Medium resolution?

I suppose there is no graphics card one could use, unless a Panther Graphics Adapter would work in one. I have 2 of these adapters and a graphics card to go with one.

If by some way I could get the Panther Adapter connected with a graphics card, would it then be possible to use a good Color LCD Screen that supports 640x480 if I could find one that would fit in place of the stock STacys Mono LCD screen?

An intriguing idea...
Luckily for my purposes, an Aranym laptop would be more suitable ;) I
wish you luck.

Thanks,
Mark

Stacy's and STbooks especially are terribly difficult to come by.  The
cool factor of the real thing is definitely high ;)

Thanks,
Mark

I know the STBook is rare, really don't know how rare the STacys are.
I actually have 2 of them. 8-)

Hey everyone,

Just wanted to let you all know that I just put up an auctin for a
spare 1040STF I have. It will be shipping from Ottawa, Ontario,
Canaada. Local pickup will also be available so if anyone here is from
Ottawa this could be a good auction for them.

The system is in gorgeous shape, and it includes an atari branded
mouse.

Thanks!

The Hitchhiker's guide to the BIOS documents the Atari ST BIOS. It's
nothing to do with games. I Googled for EmuTOS, as suggested, and
located a copy.

Previously, when I Googled for "Atari ST Hitchhiker's guide to the BIOS," I couldn't find a copy of the document that I have a paper copy of.

I still haven't found an online copy of the ST BIOS print out I have. It includes files called init.s and others (sorry, I don't have the names to hand at the moment).

Goes to show what I know. Been around Atari STuff for years and had never
heard of this.

Learn something new every day. :-)

Yes, there is a hardware replacement for HSModem for ST family
machines. Atari Workshop in England, or the UK, should have a few
left, and if they do not, I have a few left.  They do exist.

Hey guys - I was just playing around with my newly acquired Mega STe. I was in Xcontrol, diddling with the Serial port CPX. It does show the extra ports on the Mega STe, but I couldn't get any of them to go past 19.2k. I thought that a couple of those ports used a better chip and could go much faster than that.

Thanks.

I think the article was for formatting 720K not reading them in XP. As long
as its formatted 720K on the PC then there shouldn't be any problems. XP
itself does not seem to want to support 720K formats which is a little sad
really.

chris

Unlikely I know - but anyone looking to sell a CT2 accelerator with or without Falcon? I would also consider any other reasonably stable accelerator.

Wanted for a CLAB Mk-X project. Unfortunately I cant fit a CT60 in the case without major iron-work for the PSU cooling, etc and dont really want to wreck the case - I also dont want an external PSU.

Thanks

Ian.

Not even under MINT? Or are you talking a hardware limitation, rather than
just a multitasking problem? Just curious. Thanks.

Some CT63 are available...
You should think about a small PSU ATX inside the MK-X case...
It is possible.

I wonder if there are freely distributable utilities for WinXP that can
format in 720K.  WinXP does appear to read the format well enough...

Except that I am told by a tech aquaintance that some of the newer
drives don't bother checking format and assume that all disks are
1.44k.  I do hope he's wrong.

LS

AHCC or ANSI HCC is Sozobon turned into a full C89 compiler for Atari ST and all its offspring.

I have reached the stage where I was able to produce working binaries of 2 of my own applications.

These are AHCX and a small spreadsheet program.

I will gradually increase the amount of working binaries (for instance TT-Digger) and also use them myself.

Once all my own applications work stable I will ask for a small amount of beta testers.

2 programs working may sound modest, but for me it means that a very substantial amount of compiler code is actually working correctly. :-)

It also means that the project starts to display a shimmer of feasability.

The comprehensive version of AHCC will integrate editor(AHCX), project manager, compiler, assembler and linker in a single GEM program of about 350 Kb.

Freestanding components can be produced on request.

AHCC compiles Pure C sources without the need for changing a single byte.

AHCC produces the Pure C object format which means that Pure C
and AHCC object files and libraries can freely be mixed.
(It made testing the compiler a lot easier :-)

In the future, usefull C99 features will gradually be implemented.

If it isn't alot of trouble, i'd like to have the info on how to do it
correctly.

Also anything on using the Falcon's LAN as a modem port.

I have MAC LAN modem Cables, and some other MAC LAN cables.
Not sure if these will work as is or if they need modified.

And if you know, Is the MegaSTE LAN port exactly as the Falcons?

I have a MegaSTE and would like to use the LAN port for something,
even as a Modem port, just to see how it works.

Do both use the same chips?

Greetings,

I know TOS 4.02 suppose to have some bugs and TOS 4.04 is suppose to be better.

What were the bugs in TOS 4.02 that were supposed to be fixed in TOS 4.04?

And will Cubase Audio Falcon work correctly with TOS 4.02?

Anyone know of a reasonable source for 68881 and 68882 Co-Processors, of different speeds in the US?

Need some for Stock Falcons and CT2B Falcons.

Standard RS-422 port.

A maclan type (RS-422 to RS-232) modem cable is all that is required.

Yes it is, same as the TT's as well.
>

You can run a null modem connection on them.
>
> Do both use the same chips?

Yes the SCC chip.

Hardware limitation, IIRC. Because both of the Falcon's serial ports are
run by the SCC chip. Hang on a sec, I am a bit fuzzy on this but it may
have been the serial 2 port and the lan port on the TT030. Might not
apply to the MegaSTE and Falcon. Which is why the Mega has 4 ports the
TT has 5 and the Falcon has 2. Will double check my docs.

Go the CT60 route.. Use a mini 12v ATX PSU like this

http://www.mp3car.com/store/product_info.php?cPath=21&products_id=67

I don't know the situation with the MKx but if the CT60 fits at all, you should buy this PSU and CT60 over CT2 ;)

Thanks,
Mark

Hi,

> I don't think there is a problem with downloading Atari ST System disks as
> there is nothing more than BASIC, LOGO or HDx on it and they all came with
> every ST computer anyhow, so there should be no problem as long as the user
> has a ST computer. TOS ROM code on the other hand, is copyrighted as that
> is the actual OS which is burned in ROM.

This sounds like the contents of the system disk was not copyrighted
because it was on a disk. The software on the system disks are also
under Copyright. And a TOS comes also with every ST computer.

But the difference was, that there was no official offer from Atari for the
system disks. And it seems, it was allowed to copy some of the system
software (AHDI, ...)

But i think it should be no problem to upload the contents to a
homepage because there is no one who has interest in this software.

In german: wo kein Kl�ger, da kein Richter ;-)

Best regards
Michael

Phantom,
I was looking at some at e-cost.com. I think I found some one time for like 20 dollars for a 33 mhz 68882. But for a speeder project that Mark D and I was doing I ended up finding one at http://www.vintagefunworld.com/default.asp
At the time I think I found them under the Amiga link and they were only 16 bucks shipped to my house for a 33 mhz 68882. Works GREAT!!!!

Thanks,

--

I'm not an expert, but it says " M1-ATX is a wide input (6-24V) ATX
power supply". It is not very useful only in cars.

I think that a good target would be compiling FreeMiNT (and/or Xaaes ;))

What about C++?

```

As promised, I ran the test on my STE (TOS 1.06).

Input frequency was 21943. (theoretical frequency=21942.85714)

I let the program run for 2 minutes (I had a stopwatch handy), and
these are the values after I stopped the test:

```
Time (1/100 sec): 12018(so I was over by 18 msec!Hope you won't mind:)
Counter         : 2616575
Real frequency  : 21771.22769
Difference      : -0.7821654723
```

Oops, a bigger gap than yout MSTE then! (BTW: how do you calculate the
'Real frequency'?). Maybe if you changed the mfp synchro every 50 vbls
(1 sec on 50Hz refresh rates) and instruct it to play a bit faster and
restore it to the normal values on the next vbl to compensate for the
delay? I'm sure that it will be hardly noticable

Regards.

P.S. Your programs are amazing :)

Well, that sounds good. Being somebody who only now learns C (not C++), and doesn't like the Pure C suite I can only encourage you to continue!

(although I can't think of any particular application I would like to do in C on the Atari platform :)

I have the equipment to burn a TOS chip with updates.

For example, I was thinking of making a TOS 4.92 chip
if possible.

And change a few things in a TOS 4.04 chip for personal
use.

The only thing I don't have is maybe the correct socket upgrade
for my programming/Burning hardware.

I can get it, but forgot what the name of the type of socket and
chip that TOS 4.04 is on.

Can someone pass along that info.

phantomm@bellsouth.net

> Oops, a bigger gap than yout MSTE then! (BTW: how do you calculate the
> 'Real frequency'?).

    I have a routine run by the MFP interrupt at the chosen frequency that
increments a value (the counter). When the test stops, I get the total time
```

and make a division: counter/time tells me how many incrementations have occured in one second: that's the real frequency. As the Atari timer has a 1/200 precision for start timer and end time, there can be 1/100 sec of error. That's why I asked you to let it run two minutes to limit its effect.

In fact, your total time could have been from 120,17 to 120,19 sec and thus, your real frequency from: 21770 to 21774 Hz. Far enough from the expected one.

The problem is that I suppose that the 1/200 timer is Ok...
Anyway, thanks for your contribution, anyone else for this little test?

Guillaume.

I just bought a Mega STe, with a small internal HD. I've got a 4 gig SCSI drive that I would like to swap out. The original drive has Atari's AHDI driver on it, the 4 gig has HDDriver v8.15 or so.

Is there any reason why I just can't swap (physically) hard drives out?

The 4 gig HD has been formatted and run under TOS 1.04 while, of course, the Mega STe has TOS v2.06.

Thanks!

PS The Mega STe is nice! Built like a tank. :-)

In order to access more than the first GByte of this drive you need an
ICD compatible host adapter. With the original MegaSTE adapter you
cannot access more than the first GByte of a SCSI drive.

Hi Uwe! Thanks for replying.

Hmm, so does one have to disable the internal Mega STe adaptor? If so, how
do you do that? Could you simply unplug the internal hard drive, and plug
up an ICD adapter/hard drive to the Mega STe's ASCI port and go?

Thanks! :-)

The road ahead is to
compile successfully:

my own apps,
a random choice of other peoples apps,
libc,
AHCC itself,
Freemint.

in that order.

AHCC compiles itself (the comprehensive version) on a TT in 9 minutes.

> What about C++?
>

Too much work for a programming language I dont like at all
and I'll never use myself.

If ever a oop language might succeed to arise me, it could
possibly be C#, or a dialect of my own.

Yes, I think this is the way to go. If you have an external ICD
compatible adapter you should be able to simply connect your drive to
this adapter instead of the internal adapter.

Hi,

Please forgive me if this is seen as spam, but I thought people in this group would be interested.

I have produced some classic computers 2006 wall calendars. It's a calendar that showcases many of the vintage computers from the 1980's. You can see it and purchase them online at: http://www.digicraft.com.au/calendars.

Cheers!

I have been looking for that old TOS Disk that I have.
As I said before, one can use it on a TOS 1.62 STE to run some very
early games and programs that will not work on TOS 1.62.
Crash Garrett is one game I remember that would not work on my STE
unless I booted up the old Tos disk first.

And I am fairly sure that the version of that TOS wasn't pre .99.
It was 1.something. Don't recall the version, but am looking for the
disk to make sure.

It wasn't a System Disk. It was Grey and had TOS in big letters
written across the label.

If I do find it, not sure that I will upload it, if there's a conflict
about
ownership and etc. Even though ever Atari ST program out there
has been copied and put into files for use on PC ST emulators.
Even several versions of TOS on chips were made into images.

I personally don't like the idea of using TOS chip Image Copies
on PCs. Why not just get a ST or STE and use it instead.
But thats my opinion.

Ron,

Depending on how you want to use the Drives, you could use the small
internal
drive as a boot drive and still connect the Larger Drive to the DMA port
using

a ICD Link II/Link 97.

Thats what I did with mine.

And it is probably possible to Boot off the external Drive while having
a internal
one installed. I think ICDs software allows this, Not sure if HD
Driver does.
You may have to use a Setup Disk in the internal disk drive to do that.

I had something setup like this before when using the Spectre GCR
cartridge.
I had a hard drive just for it and booted up that drive only when I
wanted to use
the GCR cart. on the MSTE.

Can this be done with HD Driver Uwe?

Any driver most likely supports this, even AHDI. TOS scans any hard disk
drive for an executable root sector and it executes the first executable
root sector it finds. Usually the code on this sector then initiates the
bootstrapping of the actual hard disk driver.

C# is a very nice language, are you thinking about compiler or a
interpreter/VM?

Hmm, if I just hooked it straight up, without disabling the internal hard
drive/adapter though, I'd lose the partition scheme on the external hard
drive, right? I mean, there can't be more than one "C", "D", etc, etc,..

Thanks.

Wow! Congratulations! :D

> Once all my own applications work stable I will ask for a small
> amount of beta testers.

I am interested in beta-testing! However I only have a few personal C sources ; I prefere assembler or higher level (read garbage-collecting) language like Java.
But if there already is a minimal libc (or perhaps PCSTDLIB already works ?), I may try it on a few command line utilities I would like to port (GNU stow, patchutils, robodoc and things like that).

Also also getting the gemlib, zlib and some other key Pure-C librairies to work could lead in cascade to some interesting builds like... HighWire! ;)

> The comprehensive version of AHCC will integrate
> editor(AHCX), project manager, compiler, assembler and linker
> in a single GEM program of about 350 Kb.

That's in itself quite a achievement!
<whining>
However it's sad there is not source-level debugger (yet)! ;P
And I think my eyes and I cannot use a programming editor without syntax highlighting any more!
</whining>

> Freestanding components can be produced on request.

That's really much appreciated: I think a separate assembler could be put to good use if it support Motorola-syntax and 68020+ instructions, as there is currently no more still-developped assembler expect GCC's gas... But as it is intended to compile pre-processed C source code, I guess there is no internal macro-language (INCLUDE, MACRO, REPT and the like), "just" cpp?

> AHCC produces the Pure C object format which means that Pure C
> and AHCC object files and libraries can freely be mixed.
> (It made testing the compiler a lot easier :-)

It's also nice of you to be modest enough not to invent your own format!

Once again congratulations for your work and tenacity,
Guillaume

P.S.: And once more if you have written/found a doc on the Pure-C object format, feel free to share it! ;)

CCAG Show Rescheduled to December 4, 2005

As some of you may be aware, we are allowed the use of the National Guard Armory in Lorain, Ohio because one of our committee members is a member of the National Guard. This allows us to hold this event very inexpensively and free to vendors and attendees. In order for us to hold CCAG at the National Guard Armory in Lorain, he must attend the event. Unfortunately, Hurricane Rita activated the National Guard unit that he is in which meant he was unavailable for the now previously scheduled event date of October 22, 2005.

We have rescheduled the show to December 4, 2005, and have announced it via our email mailing lists and on this website.

True, but if you just shut the computer down, you cannot get it to boot into the system unless you or the system runs some program that checks and/or fixes the partition.

No there is not reason why you cannot do this. I just it last month with my Hades. I swopped out my old Maxtor 2.5 gig drive for a Western Digital 80 gig drive. You just have to make sure you backup your data and can be able to put it back on your new HD.

It's a long time since I owned, or even used, an Atari.

But I have been tidying and find I still have a lot of software. Before I bin it, would anyone like any items.

Free, except for postage. I don't mind sending things internationally (I live in London, England), but please note that postage on some of the more interesting items may be large even internally as they have big manuals.

All software either has a serial number, or does not ned one.

The most interesting items are

Calamus SL (I believe one can actually upgrade to the latest version at a reduced rate once you have this copy)
Outline Art
Invision Elite
Easydraw 3

Akso

ImageCopy 4
Superbase Personal
NVDI 3
ConNect (demo version only)
Freedom
Selectric
Kobold
Bitmap View
Gem Spooler
Gemview
GSZRZ
HSModem
Idealist
LetemFly
Edith (text editor)
Marcel (word processor)
TextStyle
That's Write (not sure if this needs a serial number)

Also items whose serial number I should have somewhere but haven't yet found

Ease (desktop)
MagicMac
NVDI for MagicMac

I am happy to give more information, but as I can't actually run these programs I have to rely on what is printed on the disks or in the manual to get version numbers, dates, etc.

Couldn't bus arbitration be implemented for CTCPI so the bus speed is irrelevant and it can be hard clocked at 33 or 66MHz PCI?

Thanks,
Mark

Hi,

Sorry for the sales pitch, but after I posted here I while back about my problematic Falcon, I received several emails requesting to buy it.

It's finally on eBay, with pics. There's some kind of short or similar issue. The system will occasionally boot from floppy, not HD anymore. Its got a 14MB upgrade and it looks like at least one or two other mods have been added, but I can't verify.

Thanks
SJ

Looking for a case for a working Falcon. The top part of the regular
case
is missing, everything else is perfect, I even have all the metal
shielding,
etc.

I'm looking for either a Falcon case (just the top or the full thing),
or any
kind of rack case second hand new, etc.

Thanks

Ian.

Bus arbitration is not the problem.
The problem is that CT60 bus signals are synchroniezd on a clokc that is between 66 to 100 MHz.

And the PCI bridge can run up to 60 MHz...

So, it is a pure obligation to get PCI = CT / 2

So, all the bus signals must be re-synchronized ...

Regards

Greetings.

Is there a Atari CD that contains all or most, System Disks
for each Atari ST Computer?

Or maybe a Online Site that has most all Atari Computer

System Disk software?

I am mostly looking for the System Disks for an Atari Stacey.
Could also use the manual.

phantomm@bellsouth.net

Hi,

I took a look at the motherboard picture and it looks like you have a upgrade
called the Nemesis installed.

This is probably where the trouble is.
You could double check each wire to make sure you don't have a weak soldering
connection.

Some Nemesis owners had the Videl Option done which requires a Toggle switch. This allows the Falcon to work with a RGB Monitor.

If you don't have a Toggle switch then the Videl Option probably wasn't done.
And I would think it would only work on a VGA monitor.

Or this is some other type of upgrade, but it sure looks like a Nemesis to me.

I installed one of these on a Falcon of mine, but ended up removing it and installing
a CT2B instead. (Still have the Nemesis hardware, software, and manual here)

I was considering bidding on it, but I don't do Pay Pal so that counts me out.

thanks for the info. There was a loose wire, but soldering it didn't help...could be that that extra heat on those old components was a bad combo.

There's no toggle switch, but I've only got a VGA monitor to hook it up to.

I don't do anything but PP anymore, there's way too many issues dealing with checks, MO's etc...

Thanks for looking though!

BTW, I notice in your description of the Falcon that you can't get it
to boot from the Hard Drive.

In the picture you have up, you do know that the Hard Drive ribbon cable
isn't attached to the
hard drive don't you?

If not, then there's no way it will boot off the HD with the ribbon
cable off the hard drives Pins.

Also the upgrade looks like one of the early nemesis. There were a few
different versions.

Its not nemesis, nemesis had a bunch of smaller SMT chips like CT60 has.
Looks like a molished copy to me.

Chris

What I mean is that if you do not shut Linux down like it is suppose to be
shutdown, you will have problems and will have to run a program like ef2fsck
before you can boot.

When using a journaled file system there will not be any problems. This
does not mean, though, that one should simply switch off the computer
instead of correctly shutting it down, but journaling ensures that the
file system is always consistent.

Hi Phantom,

P>I am mostly looking for the System Disks for an Atari Stacey.
I don't think anybody needs a system disk for an Atari Computer. The
system is to be found in the ROM chips.

AFAIR the ancient system disks just provided BASIC or LOGO, but no
interesting soft.

P>Is there a Atari CD that contains all or most, System Disks for each
P>Atari ST Computer?
And because Atari (yes, the brand still exists) or its buyer still
holds the TOS' copyright, I'm afraid that there will be no such disk.

Please correct me if I'm wrong.

Und TTsch�

Umm, not with a journaled file system like Reiser. I use it on all 3 comps and my laptop here.

If one gets shut off accidentally without shutting down correctly, (say, a power outage, rare lockup, the dog brushed the power switch, whatever) when you turn it back on, it simply complains about not being shutdown correctly, and goes ahead and does whatever is needed. There is no user intervention required at all.

I believe only once, in about 3 years have I had a problem that did requre me to do something extra. I had to rebuild the tree on a system, but I'm pretty sure it was because of an older/failing hard drive that I wound up replacing anyways.

Cool stuff...

That's fine, I can do Pay Pal if I want.

I really don't need this one.

Truth is, I have more than enough Falcons to keep me
Busy. I just got my second CT2B Falcon with a complete
boxed all original Cubase Falcon Audio with Dongle and
DSP clock plus most of the original updates and extras.
It's in super nice condition with the Centek Ram board.

Also just got in 2 Staceys with lots of original ST-Falcon
software, CDs, books, mags and hardware.

That with the Panther Graphics Adapters/Card and the
nice Nova Graphics card for my MSTE is enough to
keep me busy for some time.

I have 6 or 7 Falcons now. Just about lost count.
With extra parts, cases and etc.
And have been buying hard to find items and extra
stuff to finish some projects and maybe put a few
new Atari items on the market that I've worked on for
some time.

I will have some extra original software and hardware

that will go up on E-Bay or somewhere later on after its
sorted.

Just trying to help the owner of that Falcon possible fix
the problems that he has had with it, not here to start
a Flame War.

Thanks for the help. I think I have a Original TOS Disk version 1.00 or
something like that. It was for early STs that booted up with TOS on a
disk.

I know that it will actually bootup on my TOS 1.62 1040STE.
Have used it to run some really old games, than normally
don't work on the STE.

I thought I saw a similar version that you have, think it was version
99?

I'll have to check the disk for the version, if its different then I'll
send ya
a copy. Other wise I think you all the Systems disks that I do.

Greetings,

I am looking to update a few of my Monitors to FlatScreens.

And was wondering if any are made that will support the
the lower RGB ST Resolutions and still work fine with
the Falcons VGA Resolutions and enhanced Resolutions.

Anyone know of a Brand and Model that will do this?

Greetings,

From my understanding of the Falcon, there was a problem with the modem port that would not allow it to achive higher Baud rates.

For this reason, the infamous software patchs were created to fix this problem. Most Falcon owners probably know what I'm talking about.

Any way, Is there a Hardware fix that one can do that would eliminate the need for the software patchs?

If such a fix is known, is it somewhere online?

I for one would like to fix the hardware and not have to use the patches if possible.

And if one can add another modem port to the Falcon, thats a upgrade I'd like more info on as well.

This is something that I've been looking at long and hard as well. What I've found so far, is that some of the newer LCD TVs that can double as computer monitors (with resolutions 1024x768 and higher) *should* fit the bill. Unfortunately, they are rather expensive! From Google searches I've seen models that actually list a horizontal freq of 15khz (which is what is required for RGB stuff).

Try entering "15khz LCD TV" at Google, and you should get some of the same

results I did. I checked through several brands and models. The cheapest I
could find was 15" models for around $500-600 or so...

No hardware necessary. <http://www.scheutzow.de/>
Ask for HSModem

> And if one can add another modem port to the Falcon, thats
> a upgrade I'd like more info on as well.

Use HSModem and take the Lan port as the second serial interface

Regards, Robert

The most common problem is that older software would not run at greater than 19,200 baud. The cure is to use more recent comms software and it pays to use HSmodem as well. Hsmodem replaces the routines used by tos, in much the same was NVDI etc works. Just more efficient code.
Some early Falcon's had a bug where the serial port would not work until the machine had been reset. FWIR it was only a handful of Falcon's effected.

Mark

Hi Ronald!

Hey man.... for this Money I could buy two of the 70CM (28") TV-Set, I use now (249 bucks "Welltech" at "LIDL" Foundation). With Black-Matrix CRT and Philips Tuner integrated. The Tuner is surprisingly working very well, obviously bez of Philips.

Well, the Technology seems to be from the late eighties (Circuitry, Schematics etc.), but the TV is new, of course. The Picture is nearly as good, as my old (still working) Philips TV (also a Valvo-Tube integrated - already). The Philips is so old, I connected every HC I know (had/have) of. I got it 1983 :-), at this time such tech costs about 1000 bucks. Today you can get it for the half-price. The best Tech till now, for watching TV, IMHO. Plasma does not endure the quarter of the time my Phillips does, and still do so :-). LCD is nothing to speak of. Beamers are nice but make also clunky LCD pictures and need every 1000h a new lamp, nothing for people letting the TV-Set running for many hours a day.

Well, LCD is at least economic (lower power consumption) for longtime-watcher, but you have to sit like an Elk in front of the screen to see something. Or a Remote controlled LCD Swivel-Arm ;-)

Paying 500 bucks for a Micky Mouse-Screen and such a low-tech (256 color information) is below my understanding. Why pushed the Industry the PC to make colors beyond 24bit, when they make afterwards such a low-quality monitoring of that :-) ????

Well, It�s sharper O.K. But did the PC industry not try to make smooth edges (pixel), going with computers? And now all this pixxy, clunky stuff comes back!? Investing GHz of CPU Power to anti-aliase it afterwards. I do that with my CRT and the Aperture Grill. Mechanical Anti-aliasing is the real Stuff.

This all is for me a fundraising campaign. ;-).... Not with me.

Best regards,

Daniel Mandic

P.S.: The TV mentioned id fully digitally outfitted (where digital should be, hehe), with all controls needed. PIP!, Teletext. Receives smooth, afterglowed and fast analog Television, from the best analog

```
TV-Stations of the World. PAL+, NTSC, PAL, 3 Scart, 1 Video IN, 1
S-video In, etc etc etc.... dark, black picture...depth of field, of
course due to Analog TV.

Hi Mark,

Yes, I know that HSModem is the most common software fix for this
problem. But it is rather old, but still works fairly well.

I was just wondering if there was a hardware fix, so one did not have
to use HS Modem to get higher Baud rate speeds?

I believe that the part of the problem had to do with software that
accessed a modem port that was not really there. And HSmodem
fixes this problem thru software. Maybe I'm not totally correct on the
above, but seems I recall it being something like that.

I was wondering if one could put a modem port in the correct place
so software would be able to access it with out a software patch.

And or sometype of hardware path/upgrade to eliminate the use
of HSmodem if one wants.

I have often wondered if HSmodem is compatible with some of
the newer hardware upgrades and some software as well.

Not trying to put HSmodem down. As it is about the only known
software fix for the problem that I know of.

I would like to see a newer software patch at the least.

Think I'll just purchase a few cheap 15 or 17 inch FlatScreens and use
the
good ole reliable Magnavox RGB monitors for RGB work on the Falcon.

Would be nice to find a FlatScreen that will do both at a reasonable
price.

Not really looking to purchase a TV. Some of the Monitors that will
kick down to the 15.75 kHz needed for RGB modes will display a TV
signal anyway. My old Mag Pro RGB monitor will do this.
It is the best RGB monitor made for ST-Falcon RGB work that I know of.
Plus it allows Atari 8-bits to be connected, even at the same time as
a ST or Falcon and ya just have to press a button to switch displays.

I finally found a new one, that I bought for around 20 bucks. Still in
the
original box with manual and cables. That does have the ST port.

Some have everything but this port. Only the PRO version has the
ST port on the back.

I have seen these at some Atari dealers being sold for around $300
Bucks.

Daniel, thank you for that information. Unfortunately, from all that, I wasn't able to ascertain one thing - does it work with both (s)VGA and RGB modes on the Falcon? Also, I would find it rather difficult to put a 28" model on top of my Falcon Rack case. :-(

I mean, without changing monitors, can you boot up to an SVGA screen, then run an RGB demo (say Hydroxyd or somesuch) without having to day anything else?

That was really what I was talking about.

Also, from the tech-specs on the models I was looking at, they achieve far greater colors than just 8bit/256...

Thanks much.

Yes, I understood. Well, what about a Multisync 15-38KHz, 50-100HZ (85-90 nominal) or so. I saw Industry Monitors, ranging from 7-28 inches. B/W, color... everything. The Case is ugly, but the CRT are best. Black Matrix etc... Multisync!!
The 28" one makes 15-40KHz... I could connect many different computer. Also PC-Games, as I play mostly 640x480 or 800x600. No VGA to RGB Converter needed anymore :-) Just connect a VGA-Plug and don�t go over 38 (40) KHz ;-9

I will look around and tell you what I find.

Hi folks,
I seem recall that someone posted some instructions for getting XP to recognize 720K floppies without having to set up a second OS. I know I printed to instructions out but seem to have lost them so if anyone out there know the answer could you please either post it again or E-Mail the instructions to me.

Thanks,
Stephen Moss

No, because it is a software problem, not hardware. The only thing you
could do is patch TOS itself.
>
> I believe that the part of the problem had to do with software that

> accessed a modem port that was not really there. And HSmodem

There were a few redirectors in the early days that allowed programs like Freeze dried terminal to work on a Falcon. The Falcon's serial ports aren't the same as an ST's so you had to fool it into using another port. Serial 1 instead of Modem 1, IIRC. But you could not go past 19,200 baud, in that scenario. The Falcons serial ports are designed to go a lot faster than an ST's, upto around 115k baud, in theory IIRC.

>
> I was wondering if one could put a modem port in the correct place
> so software would be able to access it with out a software patch.

It is in the correct place. ST's support 4 serial ports, Serial 1 & 2 and Modem 1 & 2. The ST only had serial 1 whilst the Falcon had Modem 1. The Falcon used the SCC chip and the ST the MFP. The Mega STE has 3 serial ports (the lan could be used as a forth, as also you could in the Falcon). The TT has 4.

>
> And or sometype of hardware path/upgrade to eliminate the use
> of HSmodem if one wants.

You don't necessarily need to use HSmodem. Hsmodem replaces stuff like flow control routines in TOS, it is a just a OS bug fixer. Use Mint and you don't need it. Not sure about Magic.

>
> I have often wondered if HSmodem is compatible with some of
> the newer hardware upgrades and some software as well.

Most likely just not necessary as the custom TOS may have had the bugs fixed, if it hasn't then you will most likely need it also.

>
> Not trying to put HSmodem down. As it is about the only known
> software fix for the problem that I know of.
>
> I would like to see a newer software patch at the least.

IIRC, mint now has the modern equivalent of HSmodem built in.

Anyway it is like this,

ST/E/FM	MFP	
MegaST	MFP	
MegaSTE	MFP	SCC
TT030	MFPTT	SCC
Falcon030		SCC

Atari just dropded the MFP port, because it was slow. The MFP could only go to 19,200 baud unless you overclocked it to 38,400. In the overclocked state you need HSmodem to drive it as TOS is not capable by itself. The SCC was a high speed uart, not designed to be compatible

with the MFP at all.
Programs like Connect can talk to the SCC quite happily without HSmodem.

http://www.atarimagazines.com/startv5n6/tterrific.html

Has some interesting info on the serial ports, worth a read.

Mark

Hi Stephen!

Just close the High Density-Lid, with an Iso-Tape or something similar.
The Floppy recognizes HD and DD disks via this hole. Without hole it is

a 720K. And the magnetic disc going with HD-Disks are even better, one day. Today it�s all the same poor quality.

Best is 5.25", the longest reliability. Also 1.2Meg. I have some "Oracle" disks, and the data is still readable. The most of my 3.5" Disks (Amiga, Atari, PC) are dead :-(. 5.25 are all working (Atari XL, C64, Amiga, PC).

Best Regards,

Daniel Mandic

Just pop in a 720k disk on a DSDD disk and it will read it fine, if the disk is formatted with higher sectors or tracks it will not work.

Well the Stacy disk has the HD tools program and park utility that is needed if you need to format the drive.

I don't think there is a problem with downloading Atari ST System disks as there is nothing more than BASIC, LOGO or HDx on it and they all came with every ST computer anyhow, so there should be no problem as long as the user has a ST computer. TOS ROM code on the other hand, is copyrighted as that is the actual OS which is burned in ROM. The only computer that loaded TOS from disk was the very early 520ST computer, and that TOS is very buggy and pre 1.0 anyhow.

Thanks for that info, it will come in handy.

I really need to get a Falcon Field Service Manual so that I can
learn more about the chips in there. Some I know well, others
I don't.

I know that Stalker also has custom code to work the Falcons Modem port to very high Speeds. Never used Connect that much, I prefer STalker. The Back Talk Script is interesting as you can write your own stuff with it.

IIRC, there was a article somewhere on adding another Modem or Serial Port to the Falcon. It's been so long, that I forget where I saw that at. Maybe on a Atari CD that I have here.

Hello,

Working on sound synchro with images, I had always a delay between sound and frames without finding the bug.

Then I wrote a little tool to test the actual frequencies generated by the MFP for the Timer A. It revealed that the theorical frequencies are not the actual ones on my Mega STE.

For example, for a 22 kHz sound, the MFP can generate 21943 Hz (the closest). Testing it, it appeared to be 21843 Hz, 100 Hz less ! 2 minutes after you get 0,5 sec of delay.

I put my tool here http://perso.wanadoo.fr/gtello/timer_e.zip (7kb, sorry for the poor interface), can anyone test this 21943 frequency and tell me if every Atari is concerned or if my Mega STE has problems?

Thanks!

Guillaume.

I forgot, it's up to the user to stop the test in my tool TIMER_E.PRG. You should let it run for about 2 minutes (as I did), thanks a lot.

Guillaume.

I used to use Stalker as well great program. Remember though it isn't

custom code, it is done as per the standard Atari spec for talking to
the SCC chip. It was also capable of talking to the MFP chip and the
RS-422 port. With HSmodem and the overclock mod you could talk quite
happily at 38,400 baud.

I could probably find that for you. I have it archived somewhere. Only
useful if you want to run more than 2 modems. You can use the LAN port
as a serial port, which means in effect you have 2 ports. But I don't
think they could be driven at the same time.

I'm probably being a bit think here, do you mean as DSDD drive?
I only have a external 1.44mb floppy drive for my Laptop.

Hi all

I am looking for a english rsc for N.AES install. Any info or links are
greatly appreciated.

I bought a CD version from 16/32 Systems some time back, but when I
start the setup.app, the text is in German. I would like a SETUP.RSC
that is in English. Is there such a file?

Or will this file need to be edited in a RSC editor?

Rory

As far as I know the setup program is gemsetup.
You can find gemsetup201.lzh, which includes English rsc, on the
Belgian ftp-server.

ftp://chapelie.rma.ac.be/atari/utilities/gemsetup201.lzh

Hope this helps

Sorry for the long delay but I just came back from holidays,

>>as far as I know the only desktop that is still in active development=
.
>A new release of TeraDesk (V3.63) can be expected in a couple of weeks
>or so-a number corrections has been made, some of which which may be
>considered more as improvements of the functionality of certain
>features. See new.txt on TeraDesk's home page.

I hope that you could fix the handling of large hard disk partitions?

For example: I have a 4GB partition and not only that it takes very
long to get information about this partition (with CTRL-I) it also
gives the following wrong values:

Total space: -9445376
Bytes used: -207933739
Bytes free: 59719680

>I must admit that I do not understand this fascination with very long
>filenames ;)

Sometimes you just get disks with long filenames and then a desktop
should show these files. :-)

Apart from that there have been times when there was no opportunity
to enter MP3 tags so you had to use the filenames instead. band,
album, title etc. In this case you could sometimes get very long
filenames.

>People have contacted me with very useful remarks about features which
>did not work as declared, or missing features which would be useful. S=
ome
>of those suggestions have since been implemented in TeraDesk- so, if y=
ou
>have some specific objections, please let me know, and maybe something
>can be done about them.

Well, one feature I am missing is the opportunity to use a different
program for shutdown.

Two other features I am missing but are not that important is to load
a true colour image as a background picture or using a
different window background picture.

Regards,

Frank

Hi Folks!

Trying to get an old TT up and running. Fixed the PSU, upgraded the RAM, swapped the HD but still a couple of things to do...

The machine has German ROM's. Anybody got a 512k image of UK TOS 3.06 ? Tried the image on http://home.ptd.net/~cjhafner/ but this is only 256k and generates checksum errors when burnt to EPROMs

Also, the HD has been formatted & partition with AHDI 6 and the driver installed using HDINSTALl but the drive still refuses to autoboot (Tried various HD's) Any suggestions?

Still after a UK TT Keyboard. Anyone??

Cheers,
Dave

You should check whether this is a problem of AHDI or a general problem,
with might be related to your hardware, e.g. the NVRAM, by trying
another driver. The demo version of HDDRIVER can be used for that:

A bit off topic, though I got 10 transistors shipped form USA to UK, cost me
�45 for a package which should have only cost �5 tops, make u you don't get
caught out with "dimentional weight"  , the company I delt with even had a
postal calculator saying $7, needless to say when they charged �40 extra I
wasn't happy, wasn't a small company either!

Hello!

Is there any place to look for how to get MagicMacX to work together
with NVDI 4?
If not, I am not able to use Publish.app or Easydraw on my Mac.

Norvald from Norway with a Falcon hided away.

Janez and all,

Ok, I will probably need some help.

Installed N.AES with MiNT. Boots fine, but when I shut down improperly,
the MiNT partition doesn't get fsck'd. It just boots into Thing and
when I open the MiNT drive, I get an error:

pid 15 (Thing): Ext2-FS (E):
WARNING: mounting unchecked fs
running ef2fsck is recommended
[OK]

I click OK, then the drive directory shows.

I'm assuming the drive is dirty, but a reboot should result in a fsck
done on a dirty drive. It does not happen. One of the .CNF files shows
the line where the shell is run with fsck, but I cannot tell if this
.CNF is actually used. There are several MINT.CNF files in different
folders, so debugging this is a problem.

I'm not against in starting over. So if there is a defacto-install FAQ
for MiNT, I'm willing to put it to the test.

I've tried EASYMiNT, but I kept getting errors in the TMP folder about
decompressing of files.

Rory

WOW what alot of crap from someone not bidding on any auction.

1) I buy new boxes. Boxes that fit the item.(No dumpster diving here)
2) I use a lot of packing peanuts. Boxes are stuffed
3) I dont want any hassle with items arriving broken. I have shipped Atari componets arround the World and never has anything arrived broken. I want people to be happy with their purchase. Not pissed off about a broken unit.
4) NEW boxes are NOT cheap but are worth it to prevent crushing. Used boxes have usually been crushed and lost their strength.

Ive added $5 for a ST and $8 for a monitor. The monitors alot more packing than a ST to arrive safetly. The boxes are costing me few cents less than I charge. I roundedd it up to make it easy. Im not hiding anything and if someone wants a different shipping method they usually ask and I gladly get then the quote.

Get a life.....

Well Im desperately need to know about any experience with these two
"Implants" - CT60 and ScreenEye Digitzer.

Anybody?

Greetz

Works with 5.0x, but I don't know how you would be able to print
anything unless you somehow have a printer that NVDI knows about and
can access?

Hi there

If you're still looking for an standard atari drive plus cable I have an
Atari SH204 I was planning to put onto ebay in the next few weeks or so. If
you want to buy this off of me for �50 plus postage at cost (or if = you're
local to Bristol you can collect it) that would be ok by me since the = last
couple of (SCSI) drives have gone for approx. �47 and �58.

all the best,

Mark
              ~~~~~~~~~~

Are the schematics of the following hardware available somewhere:
- PAK68/3
- ADSpeed ST
- CaTTamaran for the TT
- ICD Link II

Is there anybody out there, who could build one of these at home?

Thanks

To Coda:
  As far as I know there is no ACSI to IDE interface.

To All:
  Which IDE interface is the most popular? I found more than three
constructions on the web and I'd like to know which one is the best to
build.
If you have the schematics of one of the above mentioned hardware (in
the first post), please let me know.

Yeah, the same thing happended to me. Running ef2fsck did however, solve my problem. Kind of bad if you have a power outage when using Mint. Linux is the same way.

>I'm not against in starting over. So if there is a defacto-install FAQ
>for MiNT, I'm willing to put it to the test.

Not sure about a FAQ for the installation, but I have some information on it somewhere.

>I've tried EASYMiNT, but I kept getting errors in the TMP folder about
>decompressing of files.

For me, Easymint was the best way to install Mint. It worked out great. When I got everything the way I wanted it, I backed up everything on to a CD. I am glad I did as my Mint partition got so screwed up I had to re-initalize my partition. I plan now to put it on a 2gig Jaz cart. I just have to format a Mink exts partition and then put everything back using my CD's.

That is what I did and it worked out quite well.

What I'd forgotten about was the command line in MMX Preferences/Devices, which allows you to use Mac printers :-(

Mine reads "lpr -P LaserJet_5 -o raw %s" FWIW.

A Master Class in setting MagiCMac X up would be very welcome, especially any info about accessing the Mac's Ethernet Internet conection - someone must have done this by now?

I'm not sure what you mean about Linux here Edward. I've got Linux running on 3 comps and a laptop, all using the Reiser FS, and power outages have never done anything to them.

I've found it to be much better than the results I've seen personally when you just switch a Windows machine off... :-)

Well power off etc on unix just triggers filesystem check, but rarely do any damage, in worst case u may lost some cached data.. If one would made check on TOS file system after power offs etc, it would be a lot safer as well, problem is, on FAT based systems, check take forewer to complete...

Running MiNT many years now, did a lot of power off's (minix and ext2 file system) and crashes (coding in MiNT) and never lost any data in 10+ years. I did lost whole partition when i played with mke2fs app though ;))

Most Unix file systems use a journal today, which makes them even more
reliable in case of an irregular shutdown.

Absolutely. As I mentioned in my post, I use "ReiserFS" here. Works great.

Actually there is a ACSI to IDE interface. Its still in development.
Ive tried to contact the developer but nothing back and that was a few
weeks ago. Its called IDE Devil.
Heres a link:

http://neuron.tuke.sk/~nohaj/acsi-avr-ide/ide_devil.html

check the links at the bottom of the page for photos (have to click on
the jpg to see it.) Also has the schematics for the device.

OpenSource and OpenSchematics design so anyone can contribute to this
project and make other advantages or bug-fixes

Yes, but U suggested and IDE interface instead of ICD Link, which
connects to the ACSI.

Hey Folks,

Doesn't anyone have or ever used a Panther Graphics Adapter/Card,
in a Atari ST/STe/Mega ST?

I have only been able to find one page in German about it and it seems
to

mostly mention the Panther2 Graphics Adapter/Card, which looks like the
ones I have. I suppose that there may have been a updated version.

Anyway, I have no real instructions on installing or using these
adapters.

These came from Toad Computers, not sure if any were sold in the US
or not.

Anyone know of a Review in a Mag, or better have a manual or
instructions
on installation and use of these Adapters.

It appears that the adapter is plugged into the 68000 socket and the
68000
chip plugs into a socket on the adapter, but not sure. There are also
a few spare chips that go somewhere, again I'm not sure where.

Any info would be a big help.

I'd be interested if I hadn't just bought one here in the US, but just out of curiosity, how did you get TOS 3.06 (TT TOS) into it?

Or was that just a typo?

Thanks.

Those were published in the german c't magazine, around 11-1993 - the article was split over multiple issues.

Hello,

I just want to tell you that I come back in the atari design after a long period (45 days) of inactivity because of moving in my new house...
I just get a new aDSL line and it is really better to work ...

What is rolling :
- CTCM are ready and should be come back from assembling.
- CT63 : wait for more orders to get enough money to order 060 and components entries into the factory.
- CTLink : hum, I do not know if I will finish this...No time and I get really more motivation around CT60/63 and the CTPCI...
- CTPCI : I will in the few day begin the first important brainstorming so see the big line to follow and how to solve the bus frequency adaption (the PCI bridge is half the clock of the CT bus).
- New machine project : later

Thanks for attention.

From what I heave heard and udnerstood so far, DEKA just isn't fast enough to cope with the datarates. The other chap said it would run jerky or soemthing like that, if thats the case then I would imagine that it is entering setup just DEKA isn't fast enough to keep up with the movements.... from power up hold down the buttons for 20 seconds, PeST Can't *not* enter setup mode regardless of what you see on the screen, in that case assuming it is in setup mode, the LB will appear to stop working since PeST will try to alter speed modes each time you press LB, hence you will not be able to highlight icons etc ont he screen.... its a way to check if it is in setup mode or not....

If you have a "RB menu" and its comming up holding down both buttons, sounds a bit like faulty mouse buttons, not saying it is that, but its that kinda missing pules problem... no way PeST or DEKA can effect PeST entering setup mode, only the mouse can do that.

Have you spotted ANYTHING else which is odd ? It could be a supply rail problem inside DEKA, only way to check is with a scope to see what the noise figures are like on the 5V line.. if DEKA is causing noise on the rail then its possible PeST isn't getting a clean 5V rail... you may also want to try adding on something like a 470UF capacitor across the 5V mouse port on DEKA... should help clean up the 5V rail a bit. If you have 4.5V or less on the rail then you have problems for sure. You should have something like 5.25V for a perfect rail. Noise of around 100mV probably wont cause problems, though when your down to like 4.8V or lower then 100mV of rail noise will start to be a problem.

You may want to try running a 5V line direct from the PSU to DEKA's mouse port, I dont know what voltage it runs on or where it gets its power, though I it gets it from the 5V rail.. if thats the case, run a new 5V & GND direct from the PSU to the DEKA's mouse port... All this is at your own risk, and its up to you to tripple check you have all connections correct.. I assume DEKA has no regualtors, if its running on 5V and has 5V regualtors then that would be a bit dumb... also assume DEKA runs on 5V, its down to you to double check that also..

HTH
Chris

Hi all,

I have an Atari 1040ST, w/ SC1224 monitor, external hard drive, dot matrix printer (!), extra ribbons for same (!!), and misc software including old word-processing (1stWord) and some games to give away to a good *QLD / Australian* home by November 25, 2005. (External CD drive also -this was never installed so I don't know if it works.)

Some caveats:
(1) You must be able to pick it up from Highgate Hill, Brisbane, QLD, Aus. -- at 3 boxes of stuff, it is too big to post. Don't ask me how I accidentally ended up shipping this 20 year old Canadian system to Australia.... ;)
(2) This is a North American system - you need to own or buy transformers to run the machines at 110 not Aus 240v;
(3) It's all quite grotty & needs cleaning.

That said, I just booted it the other day and all seemed well. Free to a good home (i.e. someone who will use it!) or best offer within the next 3 weeks, by November 25, 2005.

cheers,
W R Louis

I believe I've already seen this - I didn't mention not being able to click on icons because it did go away, so I think you're spot on here.

> If you have a "RB menu" and its comming up holding down both buttons, sounds a bit like faulty mouse buttons, not saying it is that, but its that kinda missing pules problem... no way PeST or DEKA can effect PeST entering setup mode, only the mouse can do that.

I honestly don't think its a faulty mouse - I took it from my stepsons' comp in his room (Linux box). It works perfectly fine there. I'm thinking that may have just been me not exactly pressing both buttons perfectly at the same time, so when the 10 seconds was up, the RB menu came up. Just a thought.

> Have you spotted ANYTHING else which is odd ? It could be a supply rail problem inside DEKA, only way to check is with a scope to see what the noise figures are like on the 5V line.. if DEKA is causing noise on the rail then its possible PeST isn't getting a clean 5V rail... you may also want to try adding on something like a 470UF capacitor across the 5V mouse port on DEKA... should help clean up the 5V rail a bit. Noise of around 100mV probably wont cause problems, though when your down to like 4.8V or lower then 100mV of rail noise will start to be a problem.

I've got a blown fuse in my multimeter right now - got to replace that before I can check anything. As far as the DEKA goes, it plugs directly into the usual keyboard header on the Falcon and thats the only connection it has, IIRC.

> You may want to try running a 5V line direct from the PSU to DEKA's mouse port, I dont know what voltage it runs on or where it gets its power, though I it gets it from the 5V rail.. if thats the case, run a new 5V & GND direct from the PSU to the DEKA's mouse port... Well, TBH I bought the PeST for a "down the road" scenario. In other words, not being able to get any standard Atari compatible mice. The mouse I'm currently using with the DEKA interface and my Falcon is very comfortable for me. Its one of those Best Electronics replacement models and its worlds above the standard Atari one. So I'm actually holding on to the PeST until I need it. I hope that makes sense! Although I might just end up using it on my Mega ST... :-)

Next time I have my Falcon rack case apart, I'll plug a standard Falcon keyboard into it, hook up the PeST and see if the problem goes away. Heck, I'll try to do that tomorrow when I have a free moment and report back here.

Thanks! :-)

Yeah, the only thing you can do is check the supply rail out, a higher
voltage on it could get things to speed up logic wise. Worth checking. I'm
using CT60 here with normal keyboard and that works great here... I like the
ST keyboards anyways, one of the reasons I didn't want to build a effile or
alike ;-)

Hmm, too high a voltage would let the magic smoke out - too low and it
wouldn't work.

Surely these things are clocked by an oscillator!

Voltage should be 5.25volts, though when I used to service power supplies we used to set them on 5.8V, this was becase of the couple of meters cable from one end of the machine to the logic board, by the time it got to the logic board it would be 5.5V, by the time it got to the other end of the logic board it had dropped to 4.6V. All comes down to poor design IMHO, though volt drop across cables and logic boards is a problem on complex designs.

> Surely these things are clocked by an oscillator!
>

PeST has no external clock. If DEKA has a external clock then first thing I would do is take it out and try some faster values in there, or even get a programmable clock IC like CTCM uses.

Hello, I live on the Gold Coast and can easily pick your Atari up, the one
I`ve got has just about packed up. I also just happen to own a large 240 to
110v transformer. good eh? Let me Know how much it will cost. regards
Dekka.

Hi all,

have added in a bargain page to cps electronincs (or tried too) to clear surplus items off. A lot of it is stuff which is new which never used or just got too darn many of them taking up space.

http://www.cps-electronics.co.uk/web/bargin.asp

http://www.cps-electronics.co.uk/web/clearance.asp

Will shipworld wide, though probably not worth overseas ppl ordering due to postal costs.

Hi all,

2 DMA cables and 1 HD for sale, open to offers before they get chucked on Ebay, really dont want to list on Ebay due to their ripoff listing fees.

Images of the drive and a DMA cable here.

http://www.aqtq39.dsl.pipex.com/temp/DSCF0013.JPG

DMA cable is the normal DMA-SCSI converter type.

have also added in a bargain page to cps electronincs (or tried too) to clear surplus items off. A lot of it is stuff which is new which never used or just got too darn many of them taking up space.

Hello,

My web pages are translated from french to english (not everything, but most of them). You can get there my programs, source codes, (french) articles written for ST Magazine.
I also updated M_PLAYER (version 3.0x has been released) with some new features:
- MPEG 1 and 2 are now correct.
- MSVC/CRAM encoder (16 bits or 256 greys) for AVI files
- a (little) better interface.

You can start your visit at http://perso.wanadoo.fr/gtello/index.html

Enjoy,

Guillaume Tello.

This topic has been beaten half to death at least 3 times, recently, so it is at least 150 percent dead. Your problem does not fit any flavor of SCSI, except SCSI I, which describes something different.

The original cables in Sun machines had Centronics 50 on one end, and a very small 50 pin connector on the other end, probably called HD50. That was their version of SCSI I, while everyone else using SCSI I was using cables with Centronics 50M on both ends.

What you need is a DB25M to HD50M cable, and if you ask for that, you will get what you need. It is not possible to predict what will be printed on the package label.

Yep, although to be a bit more precise, mine does jiggle slightly.

The PeST IS in setup mode, however, and one can select the various
modes well enough. For me, only one of the four is pleasant to use.
Which do you prefer?

Galen

I have a working ADSpeed 16 currently in a 520ste, with the driver
disks.  I would let it go for a fair price + your 8MHz processor, if
people might comment what fair is since I don't know...

I have a good 520ste with a busted case, anyone have a case from a dead
machine 520 or 1040 they would sell me?  I'm thinking USD $20ish?  It
has to be the STE case and not the ST case.

Thanks

Andy Summers

I never even tried any of the modes, once I saw it wasn't working like it
was supposed to. Guess I'll have to hook it back up - or better yet, to my
Mega ST where I can see what its doing. ;-)

Hello Everyone,
I have a friend that tore down his CT60'ed Falcon for remodeling his basement when he reinstalled everything he plugged in the EtherNEC cable to the cart port upside down. Now he cannot access the internet. He uses MagicNET like I do and it says something needs to be specified in services or something like that. Can this be fixed and if so how?? I seem to remember a thread from a while ago that talked about this. Cannot place my finger on it right now.

Thanks

Umm, if I recall that thread correctly, it potentially can blow something
like a resistor or capacitor on the Falcons motherboard and you have to
replace it.

Its a very bad thing to do, from my understanding. I hope not in your
friends case, maybe he dodged a bullet. :-(

Hello Ronald,

I just did some google searching and found the exact thread after some searching and it appears to be a blown fuse named F2. His Falcon though is apparently booting properly. Unlike others that I have read that have said that their falcon resets with the EtherNEC plugged in. But I passed the information on to my friend so that he can get his Falcon fixed soon.

Thanks,

No problem. Sorry to hear anyone is having trouble with their Atari
computers. It does sound like he may have gotten off a bit lucky though!

:-)

Now that this auction is over and done with (with a bid of $1,635), does anybody here now what became of the deal? Did the seller decide this was an adequate price? Was the buyer active in this group? What sort of wonderous treasures were extracted from this storage unit from hell?

Hello Carey,

It could be something as simple as a bent connection since it was put in upside down. Happened to me once. Or it could be that something is blown on the motherboard, but I do not believe that is the case.

When and where does he get this message about the services? It also could be something is messed up in his settings, most likely in his ETC folder. When I installed my new Western Digital hard drive, I could not connect either with MagicNet. Turns out files in my ETC folder had to be replaced.

Hi Folks.

Have any of you had any success with using a Hitachi DK23CA-10 (10 Giga Byte) IDE drive in a Falcon ?

I am using HD 7.1 . The program lists the drive but cannot see it when I try to partition. The Falcon Just bombs out.

I seem to remember reading somewhere that a Falcon could access max 128Gbyte. Is that really so ?

The drive checks out ok on my friends PC notebook as being fully functioning.

Any ideas please as new drives of low capacity are now almost impossible to find.I am using a 6Gig IBM DCMA 21440 drive with no problems on my Falcon but my wifes drive on her Falcon is going down fast and I need to replace it as soon as possible.

Cheers,

Paul.

You might need a later version of HDDriver? I think you can download a 8.x
demo that should tell you whether or not thats the problem.

I'm not sure what the total top size is for hard drivers on the Falcon. I
believe its about 1 gig per partition, up to the letter P? Not sure. Using
something like MagiC or MINT though, you can certainly go much higher.
I've got an 80 gig Maxtor HD that works fine with MINT.

HTHs.

Guys, is the Atari Workshop in the UK the only place that still sells the
Freekeys kit?

Thanks.

Hello guys,

I'd like to announce my intent to create a nice IMAP email client for GEM. It won't be great at first but time to first product should be very very fast since I'll be developing it on the libetpan library. As with most of my productions it will be MiNT only due to library dependencies ;)
How soon will you see results? I believe GIM had a release about 6 month after I announced.. Hopefully it will be sooner. I'm going to be working also on a C# project for work so my time will probably be stretched. I've been slacking so bad on my Atari stuff lately :-/ Time to get back and finish what I started with Sparemint 2.

Thanks,
Mark

Can you please send me your serial number, so that I can add you to my
database of registered users? Thank you.
You should use the demo version of HDDRIVER 8.1
(http://www.seimet.de/hddriver_english.html) for testing it with your
drive. 7.1 is rather old.

>   I seem to remember reading somewhere that a Falcon could access  max
> 128Gbyte. Is that really so ?

Yes, this is correct for IDE drives. For SCSI drives there is no such limit.

I am going to place all my stock of my 1.44 upgrade on Ebay in the near future. There are around 30 PCB's and probably around parts to build up about 10 modules. Instructions and such are on my website. The kits (excluding drives) I have been selling for �25, though I will make a you a offer for the lot at a fraction of the cost. URL http://www.cps-electronics.co.uk/144/HD4.htm there are links to instructions etc from that page, you might want to leech the pages before they are taken down.

While on the subject, I also have 3 STFM's I upgraded. Was selling these for �65-100, though not asking anywhere near that, if you are interested or know anyone who might want one then let me know. open to *sensible* offers at the moment,
the list below is what I think is baged up in the loft at the moment..

Atari 520 ST FM

Totally stripped down, cleaned & serviced. Keyboard has been totally striped down, cleaned, and had ports re-soldered. Good case, not new.

Upgrades -

- Hardwired 4MB 72pin SIMM

- New 1.44 Sony drive fitted with our own fully automatic contoller module.

- Updated to Rainbow TOS 1.4

-Good case, not new

Atari 520 ST FM

Totally stripped down, cleaned & serviced. Keyboard has been totally striped down, cleaned, and had ports re-soldered.

Upgrades -

- Populated to 1MB.

- New 1.44 Sony drive fitted with our own fully automatic contoller module.

- Updated to Rainbow TOS 1.4

- New case

Atari 1040 ST FM

Totally stripped down, cleaned & serviced. Keyboard has been totally striped down, cleaned, and had ports re-soldered.

Upgrades -

- Populated to 1MB.

- New 1.44 Sony drive fitted with our own fully automatic contoller module.

- Updated to Rainbow TOS 1.4

- New case.

Also have piles of ST spares if you ever need anything, sold out of floppy drives a while ago though!

A lot is also electronics items such as cables etc, they are on www.cps-electronics.co.uk check out kits & modules and �1 pages. Trying to clear out as much stock as possible as quick as possible. Open to sensible offers on "lots" of items. Have boxes full of some items. Cables etc are selling at half the price I brought them for to clear.

Also a lot of stuff on Ebay , Atari & electronics items. Electronics items probably not much interest to people here though...

http://search.ebay.co.uk/_W0QQfgtpZ1QQfrppZ25QQsassZexxosQ5fuk

If I can think of any more ST items I will post them on here as and when..

Cheers,
Chris

Hi Folks.

" The Life And Times Of The Atari XL/XE Series " features on pages 78 - 81 in the latest Micro Mart magazine (10-16 Nov 2005).

Collectors of Ataris should check it out as the mag will not be on the shelves long as it is a weeky publication.

Cheers,

Paul.

Hi there,

if you're an old computer collector I'm sure you'll be interested in the =
(probably) largest old computer sale EVER. Over 570 old home computers =
are up for auction at www.mo5.com/dimitrisales/
All you need to do is register (it's free and done in 20 secs) and then =
you can start bidding. If you want to have a look at what's up for =
auction without registering, that's possible too of course, just click =
here then : =
http://www.mo5.com/dimitrisales/auctions.php?tri=3D4&limite=3D533
Some very very very rare items are up for auction, the most famous one =
probably being the Commodore 64 GOLD WITH commemorative plaque!!!
But there are many other fine items, if you're a collector, I'm sure =
you'll find them quickly enough    :)

Right now, 145+ collectors are already bidding...so don't hesitate or =
you'll be too late!=20
ALL AUCTIONS END DECEMBER 4TH 2005

Oh...if you want to see pictures of the collection, go here : =
http://users.pandora.be/F-242/Computers/NewPics-25-10-05/
And if you want to see the complete list with direct links to these pics =
(not all comps have a pic yet) go here : =
http://users.pandora.be/F-242/Computers/Computer-List-Dimitri-with-pictur=
e-links.htm
```

That's about it...good luck if you intend to bid.

Dimitri Kokken,
Belgium

I have acquired 2 Panther Graphics Card Adapters and 1 Graphics Card.

Does anyone have any experience with these, if so I could use some basic info on them. I do not have any software for these and am not sure if any is needed except for maybe NVDI which I have.

If I am not mistaken, this will work in a 1040STE, but not sure.

Which Atari Computers are these suppose to work with?

I believe the graphics card is a ET 4000.

I don't have it in front of me to be sure, its still in the box.

Any info about this is much appreciated.

phantomm@bellsouth.net

if your board has been made "to the norm" then pin 1 will be a square solder pad on the pcb, all the others will be round.

Chris

Hello,

Sent both Lyndon and Rohry a mail about this, but no answer so far :-(
Could someone tell me what the jumpers on Eiffel board are for ? There
are 2 set and 3 not set. Maybe some planned enhancement ?

Regards,

Jean-Luc

Hi,

I have an Atari ST hardware that connects via the ROM cartridge port on the Atari. I would dearly like to connect the hardware to a PC and use it via an emulator (even if the current emulators dont support this, I dont mind changing the code). Is there anything out there that will allow me to use this peripheral on the PC? Any type of Atari Cartridge-to-PC bridge? Ideally connecting to an USB-port would be great. Sorry if this is a newbie (or FAQ) question. I dont have an Atari ST and dont plan on getting one. But, I would still like to use the hardware...

Thanks,

Ram

The notch at the top of the chip will also match up against an
indentation/notch at the top of the socket.

Hmm, I take it that you and Chris haven't actually seen the Compatibility Plus 2 board? (not meaning to step on toes here - just wondering!). Because its a marvel in size. There is only one regular socket (or at least what I'm used to seeing as a socket). The 68000 CPU sits in it, on top. Now if you can imagine, flip it over, and *in between* the pins that will go into the normal CPU socket on my Mega, is where the 2 TOS 2.06 ROMs sit. There is not a regular socket, just holes in the pcb board for the pins of the ROM chips. Very small, very tight. No markings in the pcb at all, and as far as I can see, no difference in the holes for the pins. There are no E0/E1 or HI/LO or HIGH/LOW markings at all. I've been able to get some of the docs (but not nearly all). Here is a paragraph:

"According to the instructions, facing the bottom of the Board, you insert the 2 TOS 2.06 Roms Pin # 1's in the opposite 180 degree direction of the #1 pin on the 68000 CPU.   Look for the Words Rom 1 and Rom 2 (top edge of the bottom of the board) on the bottom of the Compatibility Plus 2 board, Pin # 1 for the ROM 1 is in the upper right corner of the Board and so on for the ROM 2 behind it"

The board looks like this:

Bottom view:

(the caret shows where pin number 1 on the 68000 chip is. (top of
the board, flip side)

```
 ^
                                            _________
_______ROM2___________________ROM1__________|____|  |
|************************************************|  |
|--------------------  --------------------------|  |
|                                                |  |
|                                                |  |
|--------------------  --------------------------|  |
|************************************************|  |
|________________________________________________|__|
```

* = pins from board, that go into the motherboard
- = holes for TOS 2.06 ROMs

Excuse my poor attempts at drawing. :-(

So...Is ROM1 the Hi or Lo TOS 2.06 ROM? Is ROM2 the Hi or Lo 2.06 ROM?
Its easy to take either ROM and put pin #1 (thanks to your guys info)of
either chip in the upper right hand corner, but which TOS ROM goes
there? Its confusing to me with no docs/pictures in hand. :-(

Sadly, according to what I've been told if I get it wrong (which I already
tried once) the TOS ROM chips may be destroyed.

I wish I knew someone who had one setup so I could compare.

Thanks everyone.

Mmmm, technically possible, highly unlikely.  If 50 million of us had
migrated from an ST to a PC then just maybe.

No one would develop this as the customer base would be so small.

The Atari cartridge port is actually relatively simple.  All that's involved
is getting the I/O in the right place and at the right time and it'd work.
It's only a case of mapping 1's and 0's back n forth.  The ROMs in those are
about 250ns which is 4MIPS / 4Mhz.  Today's PC's could swallow that in an
instant.

Nice to dream about these things but not gonna happen, kind of dissapointing
that is, that we're capable of so much yet do so little.

Best get an ST then Ram.  Sorry.

If its a ROM cartridge then you could use an ST to read the contents and then run it in an emulator, but if its dongle or something that actually needs plugging into the ST while the program is running then no.

You could build your own Cartridge > ISA bridge, assuming you still have an ISA based machine, but then if you knew how to do that, you wouldnt be asking the question.

But not all cartridge ports have only ROMS in them. There is a sound sampler
cartridge that lets you sample sounds. I have an adaptor that lets you put
an Ethernet card on the port. Both these must have some kind of pseudo write
to get data out of the ST, (on the sampler just to set the sample rate) as
the cartridge port itself is strictly "read only". Would these work on an
emulation?

>
> Nice to dream about these things but not gonna happen, kind of dissapointing

If its just the ROMS then couldn't these go in a ROM Board such as was used
by Gemulator when emulating a MAC to hold the MAC roms...

Nope, admittedly no. But unless they're using sockets from billy bob then
it's almost rule of thumb to suggest that things are standard.

Ahhhh, I see now. Well, if you put the roms in the wrong sockets, say TOS1 in TOS2, and TOS2 in TOS1, then it won't blow them up at all, no way!! (i think..) All that'll happen is just that it won't work. As from the board's point of few they'll be containing firmware and data which is gibberish.

As for which is actually ROM1 and which is ROM2, I'm not sure. But what I can say, is that if they're in the wrong way round it just won't work. There'll be no electrical conflict, just that the computer won't do anything.

When I upgraded my MSTE to TOS 2.06 I faced a similar problem as they're not marked either, it just says U206 and U207 (just checked at time of writing this). TOS1 went in TOS2, and TOS2 in TOS1.

@CHRIS@ What's your feeling on this about getting the chips in the wrong sockets??

Actually, going back to that pin1 thing again, the way to truly confirm it is to trace the GND and +5v back. You'll need to find out the pinouts of the 68000 so you can confirm it, unless there's a +/- flylead coming off or similar.

They're only 1's and 0's in the right place at the right time. The ST doesn't know what's going on, it's only running code which interprets those 1's and 0's into something humans understand. Sampler, video grabber or not, the ST doesn't know that.

As Coda says over in the other sub thread, a bridge is technically possible.

It would take alot of work, and would definitely need total support from the developers of the various emulators.

All of these things are possible and start from ideas such as these. It was perhaps only far fetched for Ram to suggest it given the understandings of business economics, the technical suggestion is entirely plausable. I'm not sure about USB though.. But if USB 2.0 can manage a television / bitstream from a USB tv card then perhaps the speed is there. Design rate of USB 2.0 is 480Mbits / second. Sooo 480 / 8 = 60Mbytes / second. Sooo. 60,000,000 bytes per second best scenario. Erm, that's quite fast.

Mmmm, hope I responded to that properly ;-)

Maybe something for our USB/Ethernet developers out there?? If there's a demand though.

The PC is totally different technology. It would be like you trying to connect a USB device to a ST back in the early 80's.

If you get the support of somewho who writes a emulator, someone who can build the hardware adapter then its possible. Its probably that the cart would have to be converted into something the PC can understand like USB, so first you have to convert your cart to a USB device. You then have to write I/O drives for the PC so it can read and understand the new USB device. You then have to get the emulator to access the new hardware via new api calls or whatever.

You dont say what the cart is, whatever it is I doubt its of much importance, if its just roms, then you could read them in a eproom programer and make a cart image file for use in emualtors. Can't see those few K of data being of much help tho. My advice to you use buy a ST and use your cart how it was intended to be used. Either that or save up a lot of ��� and pay a commertial software/hardware developer at least �100 per hour to make it do what you want.

Chris

<big snip>

What ron needs to do is get a multimeter, find your +5V rail (assuming it comes from the ST PSU) and measure each of the rom pins until you get a reading (beep setting would be good) it is possible that you will have more than 1 pin connected to 5V, though most are address lines so they be connected. If you can work out what pins are connected to 5V then you are half way there.

Getting HI/LO the wrong way does not kill them, I can't remember exactly what it does, but I think you get vertical lines down the screen or some odd thing like that.... I would get your roms checked out too if possible. If you have blown them up then they are probably unreadable. I have TOS206 images on my old P200 in my workshop. There are 2 checksums though (I think I only have the one) this is becasue some roms have FF in blank space and some have 00 for blank space, hence depending where you get your roms from could be either checksum. No chance if these are patched roms of any kind.

HTH.
Chris

Thanks for the reply.

Well, I'm not too concerned about the 68000 chip itself. It seems to be marked on the PCB in a standard fashion. There is a notch drawn in the rectangle that goes around the 68000 socket, just like you see on the STs motherboard, for example. So I feel confident that the 68000 is in correctly there. The 68000 chip does have the orientation (is that the correct term?) notch in it, with the countersunk dot, which I think denotes pin #1.

So it should just be a matter of getting the ROM directions sorted out.

I hope. :-)

I've got a multimeter - I need to get another fuse for it though. I blew
the fuse checking an ATX power supply the other day (am I a clumsy oaf or
what?).

You know, I didn't think it did either. A few years back, I had an STe
that I put TOS v2.06 in, and I got them backwards the first time. It just
wouldn't boot up. Once I reversed them, it worked fine. Of course, its
much easier in the STe, you just have to move that one resistor.

I'm wondering if destruction of the ROMs might just be something
associated with this board though, due to its design? Best Electronics was
the ones that told me that, and they are usually pretty reliable with
their info.

Thanks for the reply.

I Don't think Ive even seen one of these boards. Tracing the power rail is the good way to go about it, maybe you could take a image of the PCB so we can take a look at it, things might make a bit more sence....

If you look up the 68000 pinout you can find GND and VCC, just follow the PCB tracks to the ROMs and you will find out which way they go in... In theory all the chips *should* go in the same way around... but does not happen all the time...

Chrsi

Hello all !

New version of MyMail 1.84 released.

Major improvements & bugfixes:

```
   - A index file corruption problem fixed.
   - Re-write of code to get faster downloads in the case when the
user is saving mail on server.
   - Printing errors fixed.
   - Some minor bugfixes.

   Read more in the history.txt file.

Download from:
--------------
 http://erikhall.mine.nu/~erikhall/programs/mymail.html

Best Regards
Erik H�ll

Jean-Luc,

The two jumpers that are already on the Eiffel are for the LED's. The
other pins may be for attaching a cable to program the PIC. I dont have
a cable to do this, I just pull the chip and re-program it.

Hello Rohry

(seems the adress I used to write to you wasn't valid :-( )
You mean it would be possible to reprogram it using the same j-tag
cable as the CT-60's (with a little change in the connector) ?
If so, could you please give us the connection ?

Thanks,

J.-Luc

Hey guys,

I'm considering buying an Eiffel or 5. But I wanted to know a couple of things first. A: how close are the EtherNAT's to shipping. One month? One year? If it's going to take a while I'll buy an extra Eiffel and sell it to some poor guy on eBay at discount later on. If it will be done quite soon, what's our time to basic USB keyboard/mouse drivers?

Thanks,
Mark

Hi,

Is it possible to use GBE (Gfa Basic Editor) + RunOnly! together with ErgoPro! from Run! software ? I own all of this, but haven't tried the combination of it. But if it works it would be the best MiNT compatible GfaBasic development environment ever.

Hi Martin!

First of all:

Whoever has downloaded RUN!Only, please update from our webpage! An important bug has been fixed (hopefully...)

> Is it possible to use GBE (Gfa Basic Editor) + RunOnly! together with
> ErgoPro! from Run! software?

Of course it does :-)
Lonny and I have been developping this stuff very closely together. So GBE and RUN!Only support each other!
And GBE supports ergo!pro, too. It sends a message, when a file has been saved and hopefully ergo!pro does update its main window.

If you use GBE with ergo, don't forget to disable Bastard!

I have even made an English RSC file for ergo!pro. It is not perfect yet (missing shortcuts or sensible shortcuts in the dialogs).

The Bubble Help file is also not translated yet! ergo!help will never be translated (unless someone wants to spend his life with doing that, it is some 400kB of source text... :-))

> But if it works it would be the best MiNT compatible GfaBasic development
> environment ever.

It does work! It should even run with memory protection. If any of the programs do not run under MP, please report this, it will be fixed as soon as possible.
But the RUN!Only should actually run with memory protection enabled and under securelevel 2 (until you use some of the evil GFA commands, that is ;-))

And plea

> Is it possible to use GBE (Gfa Basic Editor) + RunOnly! together with
> ErgoPro! from Run! software?

Of course it does :-)
Lonny and I have been developping this stuff very closely together. So GBE and RUN!Only support each other anyway.
And GBE supports ergo!pro, too. It sends a message, when a file has been saved and hopefully ergo!pro does update its main window.

ergo!pro itself has always been ready to work with anything, as far as I know.

I do use the combination ergo!pro+GBE+RUN!Only every day without problems here.

If you use GBE with ergo, don't forget to disable Bastard!

I have even made an English RSC file for ergo!pro. It is not perfect yet (missing shortcuts or sensible shortcuts in the dialogs).

The Bubble Help file is also not translated yet! ergo!help will never be translated (unless someone wants to spend his life with doing that, it is some 400kB of source text... :-))

> But if it works it would be the best MiNT compatible GfaBasic development

  **********************************************************
```

Recently the ftp-server underwent some changes. As a result I don't
have fully access to the server anymore. This means for instance I
can't make symbolic links anymore.
Also for the moment it seems impossible for anonymous users to upload

to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible again to make uploads to the incoming dir. In the mean while you can always send the uploads directly to me.

internet

ftp://chapelie.rma.ac.be/atari/internet/mymail-184.zip
(1.333.824 bytes) Nixce powerful GEM based e-mail client for STik/STing/Gluestik/MagicNet

ftp://chapelie.rma.ac.be/atari/internet/aicq/aicq165.zip
(132.345 bytes) Very nice GEM based ICQ client for STik/STing/Gluestik/MagicNet

programing

ftp://chapelie.rma.ac.be/atari/programming/gfa-basic/gbe-130.zip
(226.829 bytes) GFA-Basic editor is a GEM based editor modeled after the orginal GFA-Basic editor. Runs under a multitasking system like MiNT.

ftp://chapelie.rma.ac.be/atari/programming/gfa-basic/runonly.tos
(157.120 bytes) RUN!Only is a so called runonly interpreter, very much like the one that used to be shipped for a while by GFA themselves. The big difference though is, that it is a clean application and even runs with MiNT's memory protection!

utilities

ftp://chapelie.rma.ac.be/atari/utilities/chrmap10.zip
(303.459 bytes) SpeedoGDOS Charmap Generator Version 1.00, 1996-01-03

ftp://chapelie.rma.ac.be/atari/utilities/cd-rom/cdplay.zip
(200.152 bytes) CD player with CDDB support under MiNTnet

ftp://chapelie.rma.ac.be/atari/utilities/music/id3memit-v2.zip
(1.283.289 bytes) MP3 ID3tag editor. This version supports V1, V1.1 and V2 tags.

Have fun,
Martin

There are a few programs for the ST that will switch the video mode into
PAL mode.

Some games do this automatically.

In the past I have bought some games made in the UK that came with a PAL
Boot disk,
that you boot first, then put the game disk in and press the spacebar,
return or what ever
and the RGB monitor switches into PAL mode.

There should be a program for this on one of the better FTP sites.
It maybe called 50HZBoot or something similar. And should be a very
small file.

Also, I seem to remember a program that did this along with some other
things, but
the name of it escapes me at the moment.

You may try searching some of the online Atari ST mags for more info on
the subject.

I have my doubts on this one. JTAG is for FPGA's whereas the Eiffel uses
a PIC. The PIC programmer is usually a very small and very simple circuit
that takes a serial transfer from a PC.

Thanks,
Mark

Hey gang. I guess specifically Alison and Chris. :-)

Anyways, now that I got the PeST in, I actually hooked it up to my CT60'ed Falcon, with a DEKA interface, using a Logitch optical mouse. The kind that has the adaptor that lets you use it like a serial or USB mouse. Using the adaptor with the PeST, I tried it with straight TOS, straight TOS with the CT60 disabled, and everything going, booted into MINT. The results were always the same.

The PeST works just fine, as far as movement, clicking, etc, etc, but holding both buttons down for 10 seconds does *nothing*.

Well, thats it for now. Let me know if there are any other tests or things I can try.

Thanks guys! :-)

Hallo Erik!

EH>http://erikhall.mine.nu/~erikhall/programs/mymail.html

Once again a new URL? Anyway, I've found it earlier and already added it to my online hotlist :-)

But that's not the reason I'm writing this.

I'm still using version 1.74, because with all otherwise working 1.8x versions I've tried, the SPAM filtering won't work as expected.

- I select "check mail"
- MyMail does so and says "you've got xx mails"
- I choose "details", as sometimes the SPAM filter will miss some or worse, classify non-SPAM mails as SPAM.
- The list displayed contains only SPAM messages. But once I hit the "retrieve" button, they are downloaded anyway! With 1.74, they were deleted, and that's what I mostly need MyMail for...

I don't want to manually un-check every single SPAM in the list, as in that case I wouldn't need any SPAM filter :-(

With best regards
Ekkehard

CCAG Show Rescheduled to December 4, 2005

As some of you may be aware, we are allowed the use of the National Guard Armory in Lorain, Ohio because one of our committee members is a member of the National Guard. This allows us to hold this event very inexpensively and free to vendors and attendees. In order for us to hold CCAG at the National Guard Armory in Lorain, he must attend the event. Unfortunately, Hurricane Rita activated the National Guard unit that he is in which meant he was unavailable for the now previously scheduled event date of October 22, 2005.

We have rescheduled the show to December 4, 2005, and have announced it
via our email mailing lists and on this website.

It works fine for me, but when I get or send mail, the screen that shows the
messages gets messed up. No real problem. I just have to close the window and
then re-open it.

The spam filter is enabled within the "Select user" menu.
This 1.84 seems very stable again (unlike previous 1.8x) and all the
post-1.74 bugs and strange behaviours seem corrected as well.
I think you ought to give it another try, after backing up your data,
then in a few days you might find it's worth it :-)

Regards,

Jean-Luc

I know it's a long shot, but I am looking for the Soundpool audio ADAT
interface for a Falcon. Does anyone know anyplace or anyone who might
sell one? I've done allot of Internet searching and found nothing.

Thanks

Hi Jean-Luc!

JL>The spam filter is enabled within the "Select user" menu.

That's in "Mail/User and server settings", and that's got to be new in =
1.8x but this has _not_ been mentioned in HISTORY.TXT which I normally =

_do_ read. And there is still a "Spam check mail" check box in =
"Options/Program settings/Spam filter", which used to control that =
feature and which I _did_ check. I normally do not check account =
settings that haven't changed for a very long time...

JL>I think you ought to give it another try, after backing up your data=
,
JL>then in a few days you might find it's worth it :-)

Okay, I'll do. But still, changing the behavior of a program in such =
ways isn't good programming style :-(

With best regards
Ekkehard

Not wanting to sound dumb, though have you "counted" 10 seconds or timed it to a clock ? If nothing happens after say 15 seconds then something is a bit odd somewhere. No matter what you plug pest into the 10 second time will always be the same. Infact if you put LED's on PeSTs outputs and put 5V power on it, the LED's would flash after about 10 seconds...

BTW, Have you checked the 5V line ? Check it as far down the line as possible.... it *could* be that you have a small voltage drop on your 5V line, in which case this *could* effect the timeings, I am not 100% sure as I have not done much work with the microcontrollers which PeST uses yet, but my best guess is that your 10 second timeing could be delayed due to volt drops. Try holding down upto 30 seconds... bascially as long as PeST has power it should be fine in that respect...

I've been using PeST on my CT60 Falcon all week and its fantastic, makes me wonder how I lived without one :P

Let us know how you get on ?
Chris

Yes, I held it for probably 15-20 seconds, by the second hand on my
wristwatch.

Under MINT, after 10 seconds, the menu came up, the one that normally
comes up when you press the right mouse button.

In normal TOS, it just does nothing.

Nope, I've not checked that - never had a reason to before. :-)

> I've been using PeST on my CT60 Falcon all week and its fantastic, makes me

> wonder how I lived without one :P

But you're not using the DEKA, right? I believe thats the culprit for some
odd reason.

> Let us know how you get on ?
> Chris

Sure thing.

Jean-Luc, I don't know what you used so this might be pointless, but here

```
is the last one that I used that worked (I retrieved my registration key
from years ago - he was nice enough to give it to me, without having to
re-register, although I gladly would have done that. This was Sep 22, 2004)

Hi all,

This time the changes aren't that many, but I thought I better get a new version released before I start changing things that will require lots of time to finish :)

Go here to download the new version: http://www.ataricq.org

Recent changes:

* Added icons for 256 colour mode (Not all icons have 256 colour data)

* Changing online status can timeout now, if server is not responding. AtarICQ interprets this as if we lost the connection.

* The keep_alive call is reimplemented, and sent to the icq server once every 2 minutes. This may perhaps prevent aICQ from dropping the connection.

* In preferences for contact list, you can now decide whether you wish a selected contact to be indicated with
a dotted box or by inverting the nick.

Have fun.

Regards,

/Joakim

Chris,

Sorry I thought it was obvious, SCSICNT.ZIP which contains one relevant GIF file...

Dave.

GALS are a pain. I some ways it woudl be better if there was firmware, as
there might be upgrades you could reverse engineer. With GALS if they blow
the verify link you have x-ray the little blighters to get any info.

Ah, I didn't know that you hadn't tested with a CT60. Mine runs at 66 - 95 Mhz with a 25 Mhz bus -- Czuba installed.

Anyhow, here's what happened (66/25 Mhz) -- note that I have a DEKA 2 interface, so this is a PEST to DEKA to CT60!

Upon plugging in -- mouse very sluggish, but works.

Upon holding down both buttons -- mouse pointer appears to jiggle slightly, but nothing more.

Upon cycling through resolutions -- only the very fastest appears to work well with my Kensington Mouse-in-a-Box, but at the fastest resolution the mouse works quite nicely.

Note: Having very large hands, I actually don't mind the original Atari mouse, so I plugged it back in and returned the Kensington to the kid's iMac. I will pick up a mouse for myself once I find a nice one -- I'm thinking of a trackball.

Galen

Sounds to me like your interface is to slow for the job. Seems like the deka interface isn't as fast as it should be for processing. I'm sure if enough people nagged alison enough she would develop a much better interface, but thats up to the Atari community not me :-)

ahhhh, some someone *DID* built that then ? I asked around for ages for
anyone who built that, I wasn't about to spend the time building one just on
the off chance, actually when I looked at it, I remember some of the logic
gates numbers were duplicated so thought thats not a good start either....
if it does work then I may make a pcb for it and pass it on to alison for
testing, im sure she could get all that logic compressed down a lot.

Cheers,
Chris

Well, we can see if its consistent in a few days. I've got the PeST ordered, it should be here soon. I also have a Falcon CT60, running at 95mhz with the motherboard mod and a DEKA interface. I'll post results just as soon as I can.

ICDs stuff is okay, but I'd heartily recommend Uwe Seimets' HDDriver
software. Its commercial, but worth every single penny. :-)

Nice :-)

Thanks to carey I have my CT60 pretty much running now :-) being using PeST
on my CT60 falcon for about 3 hours and was fantastic to use!

Myself and alison were talking about making a keyboard version aswell,
though we don't feel there is enough demand for them so its on the back
burner now.

Chris

Derrick, in order to test if your drive is recognized the demo version
(http://www.seimet.de/hddriver_english.html) of HDDRIVER is sufficient.
In case your drive is not recognized by the ID check of the HDDRUTIL
tool the drive may not be jumpered correctly, or is not correctly
terminaited, or it requires a SCSI feature called Initiator
Identification, which the ICD Link does not support.

```

Yesterday, I tried with both the ones I found on the Interactive
website, which I found via google. One of these adresses is

binder AT rbg DOT informatik DOT th DASH darmstadt DOT de

> is the last one that I used that worked (I retrieved my registration key
> from years ago - he was nice enough to give it to me, without having to
> re-register, although I gladly would have done that. This was Sep 22, 2004)
>

> gryf AT hrzpub DOT tu-darmstadt DOT de

This is exactly one of those I tried before, when I tried to register first. I gave it one more try today, and hope it will be the good one.

Thanks,

Jean-Luc

Well don't keep it a secret! What was it that was causing you so much
grief? If for no other reason post it so other potential CTxx owners can
benefit from you experience. :-)

Yeah, with the DEKA and Eiffel there are already keyboard solutions. It
might be like you said.

ahhh, well, so it seems, there was a pile of stuff in a "MajiC" folder with
auto programs in which it seems were needed, I dont run majic anyways..
actaully didnt even know any auto loaders were needed at all! I know the
cpx's needed updating and of course I did all that... just never worked,
after booting up I couldn't even change res without it crashing, I had this
auto stuff in and changed res about 20 times with no problems, ran STzip for
about half a hour with no problems, so not managed to crash it yet... though
it was like 1AM when I was talking to Carey about it so not tried much
testing....

Seems there is a flash tool for updating TOS, can't get it to work tho,
saying the file is not a TOS image file, but it is! so not sure whats going
on there yet... not had chance to try again yet... been out most of today...

Maybe one day in the near future one will be developed... at least we are
hear to support new "stuff", and hopefully will be for a long time yet
too...

Chris

If you have the ICD Link 2, then I would get HDDriver. I have a Link2 in my
STe and HDDriver works great with it.

  I will pick up a mouse for myself once I find a nice one
> > -- I'm thinking of a trackball.

The Logitech Marble Mouse trackballs are brilliant. :-)

http://cgi.ebay.co.uk/Logitech-Marble-Mouse_W0QQitemZ5821487863

You're unfortunately stuck with this DEKA arrangement though. I think I know what's going on...

PeST communicates with the ST's stock keyboard at just about the threshold limit to achieve the fast tracking. Then we pulled back a bit by about 20uS to build in an element of safety, but still, we're communicating ALOT faster than the original ST mouse does. I'm thinking that the DEKA was tested with a stock ST mouse and that PeST is too fast for it, this would also be a problem for the other high tracking replacement ST mice. Mmmm, if you're able to sell-on your PeST I could do one for you which is even slower (custom firmware) for the same price, but I can't guarantee that it'll solve the tracking speed without having a DEKA to perfect it on.

The beauty of this older hardware from a developers point of view is that everyones using the same keyboard MCU and Atari firmware, right from the basic ST through to the Falcon / TT. This DEKA arrangement is shifting towards the PC arena situation where manufacturers can't entirely predict their target market. I know it's common sense to say that PeST wasn't designed for anything other than the Atari keyboard, but that's just greedy company get-out speak and I don't like that approach to customers. I may be able to do a custom PeST for you if you're an obsessed Atarian but we'll need to find out the tolerances of DEKA. I'll put this on the faq in the next few days.

> >
>
> I'm sure if enough
> people nagged alison enough she would develop a much better interface, but
> thats up to the Atari community not me :-)
>
> Chris
>
>

We can't develop a better PS2 mouse interface without cutting corners and reducing robustness, we're at the limit of what can be achieved with the Atari's keyboard sub system. The bottleneck is the speed at which we can communicate between PeST and Atari. There are so many PS2 packets being converted it almost goes beyond imagination, it's literally 1000's. If they're not all captured, and that means dud PS2 packets too, then we lose the 'feel' of the mouse. To give IBM and Microsoft their credits due, they've done a pretty good job as far as input devices go. Try loading up DOS 3.1 and your favourite retro game and you'll literally feel how far things have progressed.

I don't see any reason to build on Eiffel as that's someone else's project and they went through the struggles and repeatedly trying to break-the-thing too. There's pride in these things now, which is brilliant, it's why most of us are here?

In some ways we've hit lucky here as we're serving a market which isn't over saturated with money-grabbing-ba$t~d companies. Well I can think of two, one in the USA and one in the UK. They've only got to service a floppy disk drive and they've broken even that week.

Tired, need sleep.

Don't know how close it is to the original Atari mouse, but just for the record I'm using a replacement mouse from Best Electronics.

So far, I've not encountered any problems with it and the DEKA interface.

As soon as my PeST gets here Alison, I'll test it and report back.

Thanks! :-)

Hi Ron :-)

Let's ave a look..

Went out on the 24th (Monday), and is currently roaming around the USA. They seem to take about 4-5 working days with Airsure, calling it priority-mail but adds about a day to a plain uninsured small packet. USA does seem quite slow from what I'm finding, now Hong Kong that's fast for all the criticism they get, 2 working days on the last one!!

:-)

Aly

They are slow - and they do things "bass ackwards" for sure. Example, 3 small towns close to where I live, Martin, Prestonsburg, and Pikeville.

In a row, it would be like Prestonsburg-> Martin-> Pikeville. Send a letter from Prestonsburg to Martin, it goes to Pikeville first. I actually had a Postmaster tell me that was how it worked. :-)

I don't know if there's any reason to make another version. The mouse
does work -- it's just not quite what you are describing.

Still, I wonder what occurs when you communicate at ST mouse speed.

Galen

Although SyQuest SCSI drives are old tech, I am new to them.
So, my understanding comes only from what I have been told.
I may be wrong about using "parallel."  What I need to find out
is which SyQuest SCSI drives will work with a 1040ST with
4MB memory or a Mega 2.  I now know from you that a SyQuest
EZ135 will work. Thanks much.

Oh, you threw me off when you asked about parallel. :-)

I've got both the EZ135 and EZ200. They both work just fine.

A friend and I resurected one of our favorite songs "Beachwalk" from a Music Studio floppy disk for the Atari ST. We used a program to read Atari ST 3.5" 360K floppy disks on an IBM style 3.5" floppy drive. Next we used Steem and a music program that is compatible with Music Studio to convert the .SNG file to a MIDI standard 0 file. Last we moved it over to Garage Band on a heavy duty Mac and arranged it.

You can hear the results at: http://www.marklehmann.com

By the way, I could not track down Davidow. If you are Davidow or know Davidow please get him in touch with me. I want to give him full credit for his work.

Even though rather limited by today's standards the 135MB capacity works
well with early Atari software. One word of caution though for the ST
or Mega ST computers you will also need to use an ICD Link adaptor for
SCSI drives. See http://www.icd.com/atari/ for a picture and
description of their host adaptor though it is no longer available
directly from the company.

NVDI is causing the problems it seems, I cannot boot with NVDI installed..... A guy is helping me try and solve this problem....

BTW, is CTCM being shipped ? I ordered one a while ago..... (chris Swinson England)

I've created a web page that will list the status of active ATARI computer hardware projects. The
intent is to have one place we can go to find the status of 8-bit and ST(e)-Falcon-TT active hardware
projects. Of course, this can only be successful if you provide me with information. If you would like
your project listed, please contact me (remove obvious spam filter) with the correct information and
current status. I will not list e-mail addresses unless requested; only web pages. In addition, if I've
listed incorrect information or if you would like your project removed, please contact me. The URL:
http://projectstatus.atari.org

You may also contact me through my home page at http://www.josephplace.com

Thanks, and stay ATARI!

Now that is odd. If I boot without NVDI, I get "garbage" on my
icons/windows 'n stuff.

IIRC, this is because NVDI disables the blitter. If you don't run NVDI,
you may perhaps find another way to do it.

Regards,

Joakim

Hi Folks!

After the following parts....

Atari TT Keyboard
Set of UK ROM chips for a TT

Mega STE Keyboard
Mega STE Case (Will consider complete unit)

All items need to be in good condition with no yellowing of the plastics. Will also consider an other TT / mste parts or machines, working or not.

Cheers,
Dave

I never had garbage on the screen at all, just NVDI locks up during boot and thats that, actually could try it in 030 mode and see if boots then.... not sure why you would have corrupt graphics, are you overclocking the MB too ? I just have CT60 without bus mods here..... might boost the DSP since I think you can clock that on its own, maybe a boost for the IDE system too, not sure without looking....

Chris

Hi all

I'm desperately looking for a software running under windows 2k/xp
environment and capable of playing my old *.arr and *.sng files compiled
several years ago with my "late" Atari 1040 ST. I tried downloading Cubase
SX but I can't get it to start on my XP equipped portable. Furthermore, the
floppy where the files are stored are formatted with the original Atari PC
and I can't even get them in my Windows PC,
Any hel welcome

Thanks in advance

Dino

Are there any instructions on the net for hooking up
Zip drives and Compact Flash cards to STs? Any
suggestions about using these items with STs?
Thanks, Melvin

There is not much to be considered here. ZIP drives work out of the box when using an adapter like the Link96/97. Most SCSI CF card adapters should also work with this adapter. In the past some users have already posted their experiences with CF card adapters here, so it is probably a good idea to check older postings from this group.

That's amazing. $127 is more than you paid for a new one when they were
still available, isn't it?
I think the Link96/97, which is more powerful than the ICD Link, was
sold for about 100 DM (appr. 50 Euros or $60) some years ago.

MS>Which SyQuest SCSI parallel drives work with an Atari ST?
What do you mean by SCSI parallel?

Any SCSI drive will work an ACSI adapter provided, but no parallel
drive will work...

My very bad experience with SyQuest 3.5" drives (105/270 Mo) made me
switch over to a magneto optical drive a couple of years ago.

You'll need to emulate an Atari ST and run a program compatible with SNG files. I was able to do this with STEEM, and a program (which I cannot remember the name of) which can read Ativision .SNG files and export MIDI. After that you can import the MIDI into Cubase on WinXP.

There is a program for reading 360k and 720k floppys with an IBM style drive. If you didn't get crazy with the Atari ST's ability for do 10 and higher sectors per track and stayed to 40 or 80 tracks the program works best. Do a search on Steem and you'll find the stuff you need.

Go to my sight, http://marklehmann.com and click on Beachwalk to see what I did with an old .SNG file published in 1986 for Activisions Music Studio program.

BTW, sorry that I no longer have all the details on the program names, I did this conversion in February at a buddies house and he has wipe his system since then. However, you will find everything you need by searching on the STEEM websites.

Vintage Computer Festival 8.0
Saturday & Sunday, November 5-6
Computer History Museum
Mountain View, California
http://www.vintage.org/2005/main/

This is your complete VCF 8.0 event guide! Vintage Computer Festival 8.0 happens this coming Saturday and Sunday, November 5th and 6th, at the Computer History Museum in Mountain View, California.

The doors open at 9:30am each day. Speaker sessions begin at 10:00am and run until 2:00pm. The exhibit and marketplace open at 2:00pm and run until 6:00pm.

Admission is $12 per person per day for full event access, including the speakers, exhibits and marketplace, or $7 per person per day for exhibit and marketplace only (exhibit and marketplace open at 2:00pm each day). Parking is free, and kids 17 and under are admitted free of charge.

Homebrew Computer Club Retrospective

The VCF in conjunction with the DigiBarn Computer Museum is proud to present a 30th anniversary celebration of the founding of the Homebrew Computer Club, the legendary Silicon Valley institution that helped to launch the era of the personal computer. Bruce Damer of the DigiBarn Computer Museum will moderate this panel of former Homebrew members, including Steve Wozniak, Lee Felsenstein, Allen Baum, Len Shustek, Bob Lash and Michael Holley.

Join the panel as they recount their experiences and gab with the group as we feast on some yummy cake, courtesy of the DigiBarn:

http://www.digibarn.org/

VCF 8.0 Speaker Schedule

The speaker schedule for VCF 8.0 is as follows:

Saturday, November 5

Time	Session Title	Speaker(s)
10:00am	Film Screening: The Future of Pinball	Greg Maletic
11:00am	IOCCC Award Presentation Ceremony	Landon Curt Noll
12:00pm	VCF Shenanigans	Sellam Ismail
1:00pm	Homebrew Computer Club Retrospective Join us in a celebration of the 30th anniversary of the founding of the Homebrew Computer Club. Moderated by Bruce Damer of the DigiBarn.	Steve Wozinak Lee Felsenstein Len Shustek Michael Holley Bob Lash Allen Baum

Sunday, November 6

Time	Session Title	Speaker(s)
10:00am	A History of the Smart Card	Jerry Svigals
11:00am	Yack 'N Hack: Computers Talk Back	Deborah Norling
12:00pm	A Personal Re-telling of Personal Computer Retailing	Dave Freeman
12:30pm	Nerd Trivia Challenge! Are you up to the Challenge? Hosted by Evan Koblentz, editor of the Computer Collector Newsletter	Evan Koblentz and three Uber Nerds vying for the prize!
1:00pm	In The Beginning: A BBS History Discussion A panel discussion to follow-up the screening of BBS Documentary on day one of the VCF. Moderated by director Jason Scott.	Christian Wirth Joe Russack Ernie Longmire

For complete details on this year's speaker series including session abstracts and speaker biographies, visit:

http://www.vintage.org/2005/main/speaker.php

Nerd Trivia Challenge

The Nerd Trivia Challenge is a trivia contest to test the knowledge of the most serious computer history buffs. Contestants are chosen from VCF attendees who qualify for play by taking a preliminary quiz upon arrival at the VCF on Saturday, November 5. Those applicants scoring highest on the preliminary quiz will be selected to compete in the Nerd Trivia Challenge on Sunday, November 6, at 12:30pm.

The Nerd Trivia Challenge is being hosted by Evan Koblentz, editor of the Computer Collector Newsletter:

http://news.computercollector.com

To participate in the Nerd Trivia Challenge, ask to take the NTC preliminary quiz when you arrive at the VCF registration desk.

Film Screenings

The VCF is proud to present the first ever public screening of a new documentary film titled "The Future of Pinball":

http://www.thefutureofpinball.com

The Future of Pinball is a new documentary on the recent history of the pinball industry. The showing is a beta version of the film and VCF attendees will have a chance to help direct the final cut based on the feedback they provide.

Be sure to catch director Greg Maletic's talk on Saturday, November 5, at 10:00am.

The VCF will also be reprising a screening of BBS Documentary:

http://www.bbsdocumentary.com

The screening will take place on Saturday, November 5, and the film will be shown in its entirety to all VCF attendees. On Sunday, November 6, join director Jason Scott and three of the subjects from the film at the BBS history panel at 1:00pm.

Tours and Excursions

Guided tours of the Computer History Museum Visible Storage collection will be conducted on Saturday, November 5, with Visible Storage open for self-guided tours on Sunday, November 6.

For those interested in touring the DigiBarn Computer Museum, curator

Bruce Damer will lead an excursion into the Santa Cruz mountains that will disembark from the VCF at 3:00pm.

Complete details and tour times are available on the VCF 8.0 website:

http://www.vintage.org/2005/main/tours.php

Bring On The Exhibits!

Once again the VCF has attracted some rather fascinating exhibits. Check out what we've got in store for VCF 8.0:

http://www.vintage.org/2005/main/exhibit.php

We look forward to having you at the Vintage Computer Festival. I'll see you there!

Best regards,

Sellam Ismail
Producer
Vintage Computer Festival

Hello All,

I have installed Extendos 4 and a Sony CD/DVD drive into my Hades and it all works great. I did have to replace my 2gig Maxtor drive with a Western-Digial 80gig drive though. With the Maxtor drive installed, the Sony drive would not be recognized unless I made the Sony the master and the Maxtor the slave.

The WD drive is great. It is much faster and much quieter. The only drawback is that I only use a little over 4gig of the 80gig the drive has. That is ok for now since I never filled up the Maxtor to begin with.

I also had to replace my floppy drive, but that was my fault. I accidently unplugged it, so I had to plug in the power cord. I did not get it in all the way and it came out while the power was on. I got another one from ATY Computers. Thanks Alex.

Once Roger updates his code I will be able to write to DVD-R and DVD-RW discs. Right now I can only read, but it is a step.

```

Hi all,

I have a TUS HD, external SCSI, I think its 230MB, comes with DMA cable, so pretty much plug it in and your away. Actually have 2 DMA cables. I never use the thing that much thse days, tend to use my Falcon and IDE drive so no use in it all collecting dust. going by the prices they are selling for it would help boost some cash into more ST projects, so it all seems good all round.

Can post worldwide, though posting a HD will cost a small fortune form UK to overseas. Will take me a few days to find it all out, will have to format the drive, make sure everythings working fine before it goes up on Ebay.
Will post the URLs up on the day.

latterz

chris

The Question is simple, what happen if instead of Eiffel I add connector for original Atari Keyboard, should I use SWITCH for TxD RxD signals or just can conect both to eiffel and to connector?

So, ehat happen if I connect EIFFEL and ATARI KEYBOARD?

Possibly in order to use a PC mouse while still using the Atari keyboard without having an awkward mouse adapter dangling off the computer or keyboard. This was my question at one time, as well. I would love to be able to have the option of using the PC mouse connector of Eiffel while still using my MSTe keyboard. I personally prefer that keyboard (my favorite keyboard Atari ever made) to a PC keyboard, because there's no key remapping to be done, so I wouldn't have to try to keep track of where the Undo key went. I saw one of the PC mouse adapters that go between the Atari connector and the connector end of the mouse in action. Looked quite awkward, and wouldn't work well in my situation. So to have my MSTe keyboard and a PC mouse connected, I'd have to have something like this. Picky, I know, but it would *really* be a nice feature for Eiffel, if it were possible!

If the files were created using Cubase 3.0 or higher, you should be
able to import them in Cubase VST. You can them re-save them in a
format that is compatible with Cubase SX.

If you created the files using and older version of Cubase, you'll need
to convert it to Cubase 3.0-format (using Cubase 3.0 or higher on a
real Atari...)

regards

Hello,
I am looking for a GCC C++ compiler port on Atari ST (under TOS, not Linux).
Anyboby have an internet link ?, does it exist ?
Thank you.

David.

sparemint.atari.org

Atari version is usable only if you have 14+MB of RAM.

(btw. please do not cross-post, it is a bad thing)

I have fixed today a cache SDRAM problem with the TOS VDI function
v_pline (thanks to Roger Burrows !).
You can found an unofficial archive here where the v_pline cache problem
is fixed:
http://perso.wanadoo.fr/didierm/files/ct60_pci.lzh
The PCI part is unfinished, but the TOS works.

Regards,

Didier.

Great Work Didier!

But due to Rodolphe changes, can we be sure about CTPCI interface?

Well, I tried it and ended messing up the Eiffel IC. I had to build an IC burner and restore the whole thing.
I can't remember the details, now, since I 'erased' them from my memory!

I am pretty sure if you could find a single ended SCSI drive it would work
with HD Driver. You would need  few partions though under TOS.

I'm not disputing the drive, its how you connect 50pin scsi drive to the
19pin socket on the back of the ST which is the problem. but I would imagine
that you would run out of drive letters long before you got anywhere near
300gig on a ST.

Chris

> hmmm, Sounds like a Job for PeST to me.

No. PeST would not do the job as I described it in my last post. PeST plugs into the existing mouse port (which is on my MSTe keyboard), then goes to a PS/2 plug on the end of a go-between cable, which then plugs into the mouse. That's exactly what I'm trying to avoid!

What I would love to see is an adapter board, like Eiffel, that plugs directly into the motherboard, which I can mount to my case (I have a PC tower re-case). This board would give me a plug for my MSTe keyboard and a plug for a PS/2 mouse, so the mouse can plug directly into the machine rather than having a chain of adapters that get smashed, unplugged, etc.

PeST is exactly the same as other adapters I've seen in action that I didn't like the looks of. I want something I can plug a PS/2 mouse into without a go-between cable, while still being able to use my MSTe keyboard.

The only other option would be something along the lines of using the Atari end of PeST, cutting off the PS/2 end of the mouse, and wiring it directly into PeST. Kind of a pain, but I suppose it would work that way. I'd still prefer what I described above, though.

He knows that and he doesnt care.
He also doesnt read this newsgroep, thats why he
asks to upload somewhere.

He apparently also knows that in the end some fool will
satisfy him.

Answering his usenet posts is useless.
